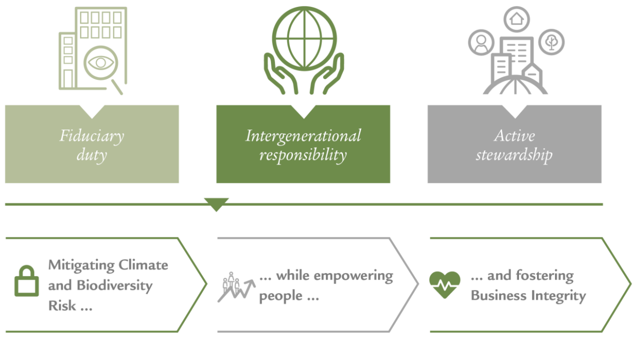
ESG at Swiss Life Asset Managers

Our ESG Concept

Our long-established tradition of responsible investment is firmly rooted in our corporate DNA. Over recent years, we have enhanced and consolidated these values to create a comprehensive approach to responsible investment. This means an explicit ESG concept, built on three pillars of corporate responsibility: fiduciary duty, intergenerational responsibility and active stewardship.



Responsible Investment Policy

At Swiss Life Asset Managers, conveying our company-wide responsible investment approach and comprehensive integration at product level is one of our key priorities.

We have designed the Swiss Life Asset Managers investment strategy with a long-term, sustainable view that is in full synergy with our insurance liabilities. Apart from having integrated environmental, social and governance (ESG) considerations across all main business activities, we are undertaking various initiatives that go beyond standard integration. To us as an asset manager devoted to its fiduciary duty, responsible investment is not only a means to redirect capital flows towards sustainable development but also an important instrument to seize investment opportunities and reduce respective risks for our investors. We trust that sound responsible investment solutions are validating their efficiency in managing risks and delivering more resilient returns, precisely because they support and finance companies acting for the well-being of society and shareholders alike.

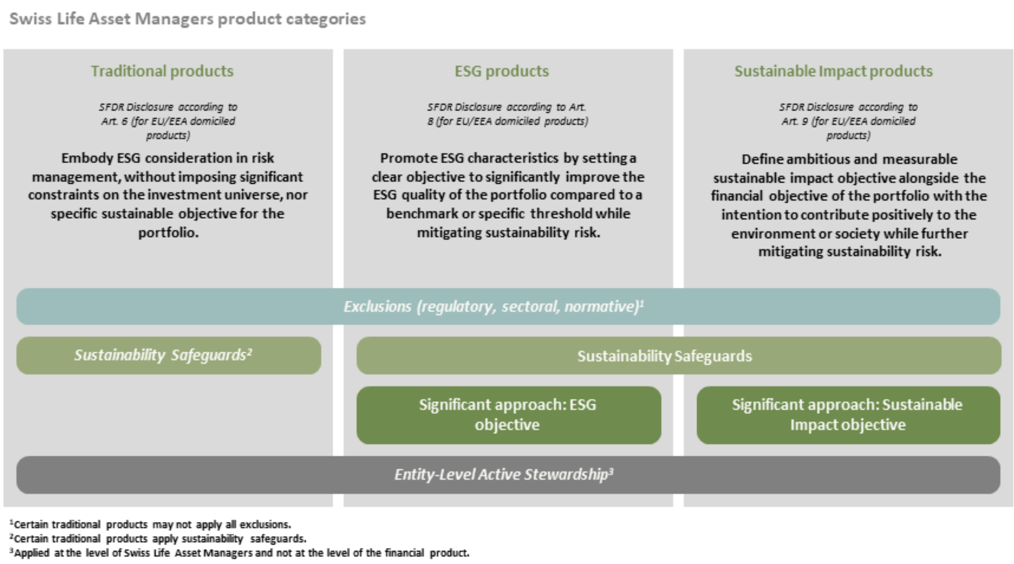
Please find more details on **www.swisslife-am.com/ri-policy**

Sustainability Product Categories

The degree of sustainability of a product depends mainly on the way in which the product's investment components are managed. If a product uses several investment components, the share of components related to sustainability determines the sustainability category of this product. Swiss Life Asset Managers subdivides its product shelf into three categories: Traditional, ESG and Sustainable Impact.

The three sustainability categories distinguish the products according to ESG objective and strategy, ESG reporting and how ESG characteristics are addressed. To be able to allocate the products' different characteristics to a category, Swiss Life Asset Managers has established an internal set of rules for each asset class. These rules define the characteristics required for a product to be classified as Traditional, ESG or Sustainable Impact are structured in the following way:

This ESG report reflects this structure accordingly. Please note that all KPIs of chapter I to VII are part of the products' ESG strategy if not mentioned otherwise ("disclosure only"). Please find more details on **www.swisslife-am.com/responsible-investment**



I. Executive Summary

Portfolio	Swiss Life Funds (F) Green Bonds Impact
AUM	143,470,000
Fund Currency	EUR
Asset Class Classification	Bond
Label	None
Swiss Life AM Classification	Sustainable Impact
Universe	None

SFDR Disclosure	Art. 9
Considers PAIs	Yes
Addresses EU Taxonomy	No
Addresses Sustainable Investments	No

Sustainability Preferences

If Sustainability Preferences are not addressed in this product the below mentioned KPIs are just for disclosing purposes.

	Portfolio	**Universe**
Option Value	-	-
Ratio on Taxonomy Alignment	38.65%	21.76%

Remarks

At Swiss Life Asset Managers, we are committed to providing a comprehensive insight into the sustainability of its ESG and Sustainable impact funds. Our ESG factsheet covers key areas such as exclusions, sustainability safeguards, and dedicated ESG strategies employed in the management of the fund. Additionally, the report includes a carbon overview aligned with the Swiss Climate Scores framework, as well as information on our compliance with the Sustainable Finance Disclosure Regulation (SFDR) and information on how we consider sustainability preferences as per MIFID II. By delivering this transparent and informative ESG reporting, we aim to give a clear understanding of the sustainability characteristics and performance of the portfolios.

II. Exclusions

Our Framework

Embody ESG consideration in risk management: Swiss Life Asset Managers applies a set of exclusion rules for all managed portfolios, where possible. The aim is to avoid sustainability tail risks, without imposing significant constraints on the investment universe, nor specific sustainable objective for the portfolio. The exclusions are addressing three different areas: regulatory exclusions, normative exclusions and sectorial exclusions.

Regulatory Exclusions

Sanction Lists: Swiss Life Asset Managers applies the sanctions lists as required by law (i.e. EU, UN, SECO sanctions).

Controversial weapons: Beyond the sanction lists, producers and owners of producing companies of controversial weapons are excluded from the investment universe. Controversial weapons mean particularly nuclear weapons, biological weapons, chemical weapons, land mines and cluster munitions. The screen is based on one hand on the SVVK-ASIR exclusion list and on the other hand on several ESG factors as outlined below. The figures below indicate the ratio of companies that are involved in the specific type of controversial weapons

Money Laundering: Issuers that are classified as “High-Risk Jurisdictions subject to a Call for Action" in the Financial Action Task Force (FATF) of high-risk countries are excluded. The exclusion applies to sovereign issuers and any corporate issuer with corresponding “risk country

	Portfolio (%)	Universe (%)
Weapons	0.0	0.0
Biological/Chemical Weapons	0.0	0.0
Landmines	0.0	0.0
Cluster Munitions	0.0	0.0

Normative Exclusions

UN Global Compact: The figure below indicates the ratio of companies that fail the UN Global Compact (UNGC) principles or are on watch list to fail them. This assessment is conducted by MSCI ESG Research.

0.0% 0.0%

Portfolio Universe

UNGC	Portfolio (%)	Universe (%)

Sectorial Exclusions

Thermal Coal: Swiss Life Asset Managers exclude all the companies which have a revenue with 10 percent or more based on mining and selling of thermal coal from their portfolios. The figures below indicate the ratio of companies that match the above mentioned threshold.

0.0% 0.0%

Portfolio Universe

	Portfolio (%)	Universe (%)
Thermal Coal	0.00	0.00

Note: please refer to Chapter VII for further Additional ESG Information

Created with RealObjects PDFreactor(R) Evaluation Version | https://www.pdfreactor.com

III. Sustainability Safeguards

Our Framework

Rationale: For its ESG and Sustainable Impact products, Swiss Life Asset Managers applies specific rules to ensure a distinct ESG quality of all products, regardless of their promoted E/S characteristics or sustainable investment objective. These sustainability safeguards criteria are key to mitigate both sustainable and financial downside risk of the portfolio and are outlined on Eligibility/Coverage, ESG Ratings/Controversies and Principal Adverse Impacts (PAIs). Exclusions are only applied to the eligible universe.

Eligible universe vs. covered universe

Eligible universe: The eligible universe contains all the instruments which are eligible* to receive an ESG analysis. Portfolios of ESG products are invested in eligible instruments by at least 50%; Portfolios of Sustainable Impact products by at least 75%.

Covered universe: The assets in the eligible universe which are covered by the appropriate ESG data is called covered universe. For the ESG products there must be at least 90% of the eligible instruments covered and 100% within the Sustainable Impact products.

	Portfolio (%)	Universe (%)
Eligibility	94.46	100.00
Coverage	82.93	87.12

Ratings, Score & Controversies

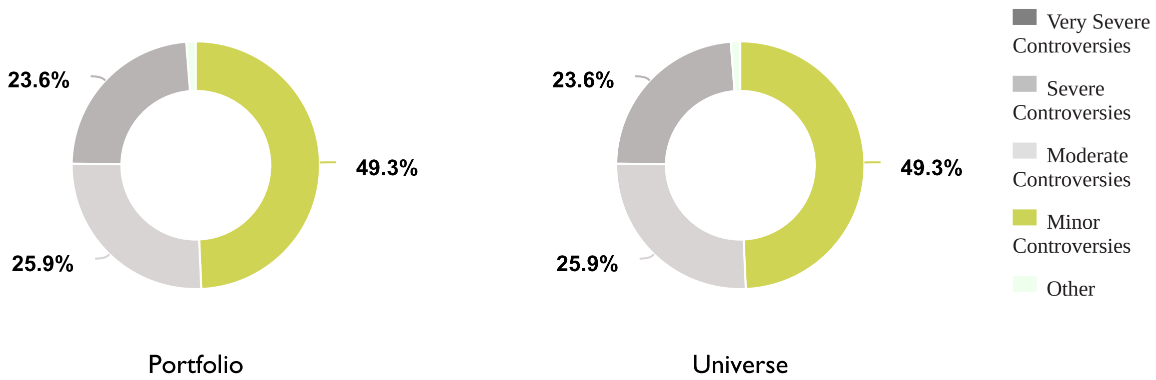
Issuers that breach one of the ESG criteria below are not investable: for direct investing Swiss Life Asset Managers products. Third-party, passive and/or multi asset products may have other criteria.

ESG Rating Exclusion: An ESG product is not allowed to invest in or increase position in ‘CCC’ rated issuers. Sustainable Impact products are not allowed to invest in or increase position in ‘B’-rated issuers or lower.

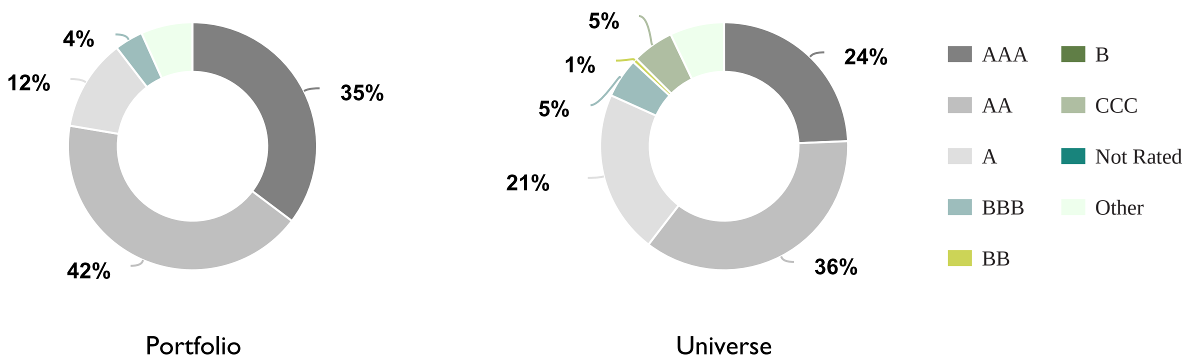
Portfolio ESG Score: Our target is that the Product's Portfolio ESG Score should be superior or equal to the Portfolio ESG Score of the traditional (non-ESG) benchmark (whether official or used in reporting).

ESG Controversies Assessment: An ESG product is not allowed to invest in or increase position in very severe controversies (Score ‘0’ equivalent to ‘red’ flag). Sustainable Impact products are not allowed to invest in or increase position in orange flag (Score ‘1’ or below) and whenever possible exclude all severe controversies (Score of ‘3’ and below) related to the thematic of the fund.

ESG Controversies Distribution



ESG Rating Distribution



*For corporate ESG KPIs: corporate bonds, listed equities, SSA and government related bonds considered as corporates.
For sovereign ESG KPIs: sovereign bonds and SSA and government related bonds considered as sovereigns.
Not considered as eligible in general for quantitative ESG KPIs are derivatives and cash/cash equivalents.

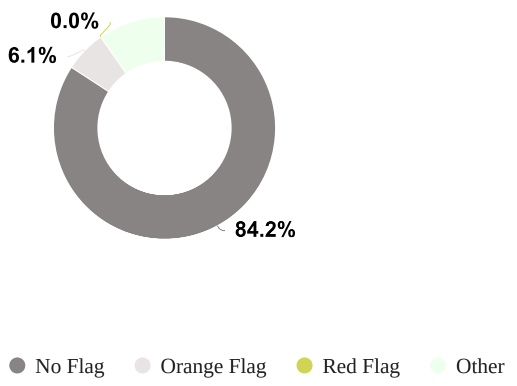
Principal Adverse Impacts (PAI)

Principal Adverse Impact Score (PAI-Score): Swiss Life Asset Managers has developed a proprietary PAI scoring system which aggregates all 14 mandatory indicators, as outlined by the EU within Annex I of the SFDR Regulatory Technical Standards (RTS). The objective is to consider the double materiality concept embedded in the SFDR and the sustainability preferences definition of MiFID II.

Our target: The product limits exposure to issuers with adverse sustainability impacts either through an exclusion or relative optimization based on the PAI Flag.

PAI Flag Distribution

Portfolio



Universe

THE BANK OF NOVA SCOTIA	2.32	-	AAA	Green	-
RCI BANQUE SA	2.32	0.50	BBB	Orange	No Flag

V. Sustainability Preferences

Our Framework

Three Sustainability Preferences: In the Commission Delegated Regulation 2021/1253*, Sustainability Preferences are defined as clients' preferences for a minimum proportion of EU Taxonomy-aligned investments, a minimum proportion of sustainable investments (as defined under SFDR) or the consideration of principal adverse impact on sustainability factors. Moreover, some of these metrics align with the ESG reporting standard for pension funds of the Swiss Pension Fund Association (ASIP).

The 14 mandatory PAIs for corporate investees

Climate and other environment-related Indicators

	Portfolio	Universe
1a. Scope 1 GHG emissions (tCO2e)	5,285	10,703
1b. Scope 2 GHG emissions (tCO2e)	1,794	1,174
1c. Scope 3 GHG emissions (tCO2e)	30,921	55,828
1d. Total GHG emissions (tCO2e)	38,002	68,315
2. Carbon footprint (tCO2e/MEUR invested)**	265	476
3. GHG intensity of investee companies (tCO2e/MEUR invested)**	783	999
4. Exposure to companies active in the fossil fuel sector (% of portfolio weight)**	15	21
5. Share of non-renewable energy consumption and production (% of total energy sources)	60	57

7. Activities negatively affecting biodiversity-sensitive areas (% of portfolio weight)	4	4
8. Emissions to water (tWater/MEUR invested)	0	0
9. Hazardous waste and radioactive waste ratio (tWaste/MEUR invested)	0	0

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters

	Portfolio	Universe
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (% of portfolio weight)	0	0
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises (% of portfolio weight)	0	0
12. Unadjusted gender pay gap (Ratio %)	7	11
13. Board gender diversity (Ratio %)	40	40
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (% of portfolio weight)	0	0

* This delegated act extends the existing MiFID II suitability assessments to include clients' sustainability preferences.

**Recommendation for the ESG reporting standard for pension funds of the Swiss Pension Fund Association (ASIP). See as well chapter II. Exclusions, III. Sustainability Safeguards and VI. Climate Overview.

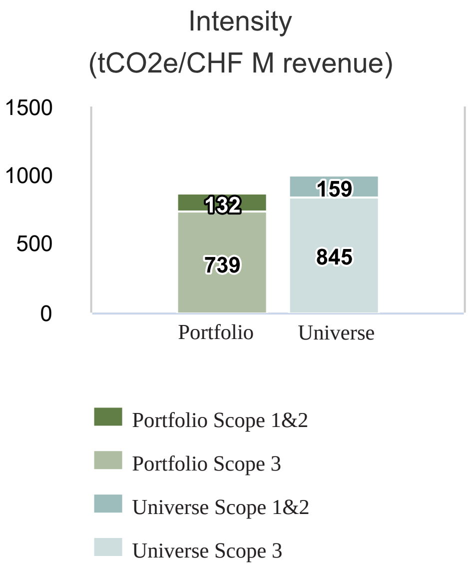
VI. Climate Overview: Swiss Climate Scores Current State

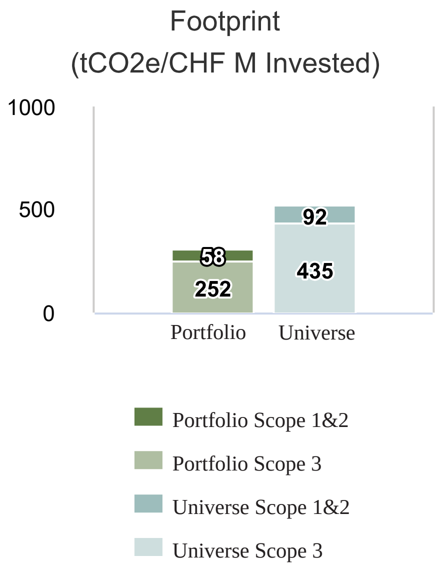
About the Swiss Climate Scores

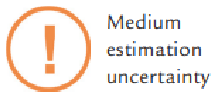
Switzerland and its financial market are committed to transitioning to net-zero greenhouse gas emissions by 2050. This is needed to honor its obligations under the Paris Agreement of holding the increase in the global temperature to well below 2°C and pursuing efforts to limit it to 1.5°C. Current science indicates that global warming beyond 1.5°C has potentially catastrophic impacts on the natural world and human society.
The Swiss climate scores establish best-practice transparency on the Paris-alignment of financial investments to foster investments decisions that contribute to reaching the climate goals

Greenhouse Gas Emissions

Encompasses all sources of greenhouse gas emissions from invested companies (scope 1,2,3), including relevant emissions of their suppliers and products.







Exposure to Fossil Fuel Activities (disclosure only)

There is scientific consensus of the need to phase-out coal and stop financing new fossil fuel projects. Below figures show the share of investments into companies that earn more than 5% of their revenues from such business activities.

Share of investments into companies with activities in **coal** (>5% revenue threshold)

VI. Climate Overview: Swiss Climate Scores Transition to Net Zero

Global Warming Alignment (disclosure only)

This is the level of global warming that would occur if the global economy acted with the same ambition as the companies in the portfolio. Some portfolios with climate objectives may intentionally include investments in companies that are not yet on track to 1.5°C, but seek to contribute actively to climate goals by improving the alignment of investee companies to bring a larger share of the economy into alignment over time.

! High estimation uncertainty

Verified Commitments to Net-Zero (disclosure only)

Companies are increasingly committing voluntarily to transitioning to net-zero and setting interim targets. The effectiveness of such commitments depends on whether interim targets are credible, sciencebased, and transparent.

Share of companies in portfolio with verified commitments to net-zero and credible interim targets:

50%

Portfolio

42%

Universe

! Low estimation uncertainty

Credible Climate Stewardship

Financial institutions can contribute to the transition to net-zero, by engaging with invested companies on third-party verified, sciencebased net-zero aligned transition plans until 2050.

Are companies in the portfolio subject to credible stewardship on climate transition?	**not available**
Share of companies currently under active climate engagement:	**not available**
Share of climate votes supported:	**not available**
Link to Climate Stewardship Strategy and Report	**Link**
Is the financial institution a member of a climate engagement initiative?	**yes (Climate Action 100+)**

Management to Net-Zero (disclosure only)

Financial institutions can contribute to the transition to net-zero, by aligning their investment strategy with a consistent 1.5°C decarbonisation pathway.

Does the investment strategy include a goal to reduce the greenhouse gas emissions of its underlying investments through concrete short (1-3 years) or midterm (5 years) targets?	**yes**
Is the portfolio part of a third-party verified commitment to net-zero by the financial institution, including credible interim targets?	**yes (NZAM)**

Explanatory Notes

The total reported value of the portfolio as well as other metrics can vary between this document and other portfolio documents provided by Swiss Life Asset Managers due to different ESG-related metrics. Many terms and metrics are described in more detail in the “Glossary” part of this document. Further information about the portfolios can be found at https://invest.swisslife-am.com/.

Glossary

Parameter	Description
MSCI ESG Rating / Score	The portfolio level MSCI ESG score is designed to help clients understand the resilience of a product to long term ESG risks and opportunities. The portfolio level MSCI ESG score aggregates the industry-adjusted or government-adjusted ESG scores of the underlying holdings to provide clients with an indication of the overall product-level ESG Rating. The score is provided on a 0-10 score, with 0 and 10 being the respective lowest and highest possible fund scores. Translated into an ESG Rating, the portfolio can be classified between CCC and AAA.
E,S,G	"Environmental" a portfolio’s Environmental Score measures holdings’ management of and exposure to key environmental risks and opportunities. "Social" a portfolio’s Social Score measures holdings’ management of and exposure to key social risks and opportunities. "Governance" a portfolio’s Governance Score measures holdings’ management of and exposure to key governance risks and opportunities.
Tail risk	High risk involving unpredictable events.
Investment universe	The investment universe, or market portfolio, includes all investable assets.
Unconventional Gas & Oil	Unconventional oil and gas is defined as oil and gas extraction activities deviation from coventional methods. It includes revenues from oil sands, oil shale (kerogen-rich deposits), shale gas, shale oil, coal seam gas, and coal bed methane. It excludes all types of conventional oil and gas production including Arctic onshore/offshore, deepwater, shallow water and other onshore/offshore.
Controversial weapons	Controversial weapons include particularly biological weapons, nuclear weapons, chemical weapons, land mines and cluster munitions.
UNGC / UNGC Principles	The UN Global Compact is the world's largest corporate sustainability initiative with 13000 corporate participants and other stakeholders over 170 countries with two objectives: "Mainstream the ten principles in business activities around the world" and "Catalyse actions in support of broader UN goals”, such as the Millennium Development Goals (MDGs) and Sustainable Development Goals (SDGs).
UNGC Compliance Overview	Shows the UNGC check statistics and key figures of the portfolio. Investments are classified and categorized as passed, watchlist or failed holdings and holdings which are not covered by this analysis. Investments are based on their market value in the portfolio.
Greenwashing	Greenwashing refers to the practice of gaining an unfair competitive advantage by marketing a financial product as environmentally friendly, when in fact basic environmental standards have not been met.
Sustainability Safeguards	The purpose of the sustainability safeguards is to set a standard for minimum sustainability requirements to be fulfilled by securities investment portfolios with a dedicated ESG or Sustainable Impact strategy managed by Swiss Life Asset Managers
Eligible universe	The eligible universe contains all the instruments who are eligible to receive an ESG score. For example, corporate bonds, listed equities, SSA and government related bonds considered as corporates.
Covered universe	The assets in the eligible universe that are covered by the appropriate ESG data are called covered universe.
SFDR	The Sustainable Finance Disclosure Regulation (EU) 2019/2088 of 27 November 2019 on sustainability related disclosures in the financial services sector is a European regulation introduced to improve transparency in the market for sustainable investment products, to prevent greenwashing and to increase transparency around sustainability claims made by financial market participants.
MiFID II Sustainability Preferences	A new requirement, for EU-domiciled products, which came into effect in August 2022, means that advisers must now ask their clients about their sustainability preferences as part of the existing MiFID II suitability assessment. The three preferences are outlined as i) Addressing the principal adverse impacts (PAI) on sustainability factors, ii) sustainable investment objective or iii) environmental sustainable investment objective (EU Taxonomy-aligned)

PAI	Principal Adverse Impacts on sustainability are the negative externalities caused by a company either through its economic activity or its products and services (throughout their life cycle), onto the planet and people.
Carbon Footprint Scope 1,2	Scope 1 emissions are direct greenhouse (GHG) emissions that occur from sources that are controlled or owned by an organization (e.g., emissions associated with fuel combustion in boilers, furnaces, vehicles). Scope 2 emissions are indirect GHG emissions associated with the purchase of electricity, steam, heat, or cooling. Although scope 2 emissions physically occur at the facility where they are generated, they are accounted for in an organization's GHG inventory because they are a result of the organization's energy use.
Carbon Footprint Scope 3	Scope 3 emissions are the result of activities from assets not owned or controlled by the reporting organization, but that the organization indirectly impacts in its value chain.
Transition to net zero	Net zero emission means that all man-made greenhouse gas emissions must be removed from the atmosphere through reduction measures, thus reducing the Earth's net climate balance, after removal via natural and artificial sink, to zero. Transition to net zero means the efforts of companies and sovereigns to become net zero in that sense.
Paris-alignment	Companies or sovereigns which are aligned with their operations and activities with the long-term mitigation goal of limiting global warming to well below 2°C and pursuing 1.5°C as defined in Agreement from the COP 15 in Paris in 2015.
Controversies	Controversies assess the impact of company operations and/or products and services that allegedly violate national or international laws, regulations, and/or commonly accepted global norms. The assessment is done based on severities: very severe, severe controversies, moderate controversies, minor controversies, no controversies.
Sustainable Investment	An investment that has the intention to generate a positive and measurable, environmental or social impact through the financing of specific economic activities, while ensuring that the financed companies follow good governance practices.
ESG Benchmark Coverage	The figures provided are understood as percentage of the market value of the benchmark's constituents, which could be rated with MSCI ESG data.
ESG Portfolio Coverage	The figures provided are understood as percentage of the market value of a portfolio's holdings, which could be rated with MSCI ESG data.
Label ISR	The Label ISR is a tool for choosing sustainable and responsible investments. Created and supported by the French Finance Ministry, the label goal is to increase the visibility of ISR products among investors in France and Europe. The ISR investment aims at reconciling economic performance, social and environmental impact by financing companies contributing to a sustainable development in all business sectors. The Label ISR, issued at the end of a strict process of labelling led by independent bodies, constitutes a unique mark for the investors wishing to participate in a more sustainable economy. To obtain The Label ISR, the fund must meet a set of criteria broken down into six topics defined by order. • the general (financial and ESG) objectives of the fund. This entails verifying that these objectives are clearly defined and described to investors and taken into account when formulating the fund's investment policy • the ESG criteria analysis and rating methodology used by the companies in which the fund invests • the inclusion of ESG criteria during the portfolio's development and existence • the ESG engagement policy with the companies in which the fund invests (voting and dialogue) • fund management transparency • measurement of the positive impacts of ESG management on the development of a sustainable economy.
Traditional products	Traditional products from Swiss Life Asset Managers embody ESG consideration in risk management, without imposing significant constraints on the investment universe, nor specific sustainable objective for the portfolio.
ESG products	ESG products from Swiss Life Asset Managers promote ESG characteristics by setting a clear objective to significantly improve the ESG quality of the portfolio compare to a benchmark while mitigating sustainability risk.
Sustainable Impact products	Sustainable Impact products from Swiss Life Asset Managers define ambitious and measurable sustainable investment objective alongside the financial objective of the portfolio with the intention to contribute positively to the environment or society while further mitigating sustainability risk.

EU Taxonomy	The EU Taxonomy Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to facilitate sustainable investment is a cornerstone of the EU's sustainable finance framework and an important market transparency tool that helps direct investments to the economic activities most needed for the transition, in line with the European Green Deal objectives. The EU Taxonomy framework defines how business activities need to be conducted to contribute significantly to one of the six environmental objective: (1) climate change mitigation, (2) climate change adaptation, (3) sustainable use and protection of water and marine resources, (4) transition to a circular economy, (5) pollution prevention and control, and (6) protection and restoration of biodiversity and ecosystems. The business activities need to respect further the DNSH and minimum social safeguards criteria to be accounted as EU Taxonomy-aligned.
Do No Significant Harm (DNSH)	'do no significant harm' means not supporting or carrying out economic activities that do significant harm to any environmental objective, where relevant, within the meaning of Article 17 of Regulation (EU) 2020/852 and Article 2(17) of SFDR
SVVK-ASIR exclusion list	"Recommendations for exclusion" in the form of a list from the Swiss Association for Responsible Investment (SVVK-ASIR). This association provides screening and engagement services for its members so that they can take responsibility towards the environment, society and the economy holistically in their investment decisions.
Thermal coal	Coal burned, primarily in boilers, to generate steam for the production of electricity or for process heating purposes, or used as a direct source of process heat. Thermal coal, also known as steam coal, refers to all coal not classified as coking (or metallurgical) coal.
RTS	The Joint Committee Regulatory Technical Standards (RTS) on ESG disclosures have been developed by the three European Supervisory Authorities (EBA, EIOPA and ESMA) under the EU Regulation on sustainability-related disclosures in the financial services sector Regulation (SFDR), which aims to strengthen protection for end-investors and improve the disclosures that they receive from a broad range of financial market participants and financial advisers, as well as regarding financial products.
Double materiality concept	The concept of 'double-materiality' was first formally proposed by the European Commission (European Commission, 2019) in Guidelines on Non-financial Reporting: Supplement on Reporting Climate-related Information published in June 2019. It encourages a company to judge materiality from two perspectives (European Commission, 2019, p.6): 1) "the extent necessary for an understanding of the company's development, performance and position" and "in the broad sense of affecting the value of the company"; 2) environmental and social impact of the company's activities on a broad range of stakeholders.
SDG	The Sustainable Development Goals (SDGs), also known as the Global Goals, were adopted by the United Nations in 2015 as a universal call to action to end poverty, protect the planet, and ensure that by 2030 all people enjoy peace and prosperity. The 17 SDGs are integrated—they recognize that action in one area will affect outcomes in others, and that development must balance social, economic and environmental sustainability.
OECD Guidelines for Multinational Enterprises	The OECD Guidelines for Multinational Enterprises (OECD Guidelines) are recommendations from governments to multinational enterprises on responsible business conduct. The OECD Guidelines set standards for responsible business conduct across a range of issues such as human rights, labour rights, and the environment.
Evolving climate-related metrics	We have developed methodologies that we use to show metrics such as carbon intensity and footprint or management to net zero, at portfolio level. These methodologies underly the metrics that are disclosed in this report. Standard-setting organizations and regulators continue to provide new or revised guidance and standards, as well as new or enhanced regulatory requirements for climate disclosures. Our disclosed metrics are based upon data available to us, including estimates and approximations where actual or specific data is not available. We intend to update our methodologies, metrics and disclosures to comply with new guidance and regulatory requirements as they become applicable to Swiss Life Asset Managers. Such updates may be substantial.
Global warming alignment (°C)	This metric reports the Implied Temperature Rise (ITR) and provides an indication of how companies and investment portfolios align to global climate targets. For further information on ITR, refer to the MSCI methodology document. Data provider: MSCI ESG Research. ITR is reported, when applicable (data coverage >40%), for transparency purposes and may not be used to manage a product. Swiss Life Asset Managers may use alternative methodologies and metrics to construct or measure portfolio performance across specific strategies, and these may not be directly comparable to ITR. For more details on how the product is managed, please refer to the product documentation.

Exposure to Fossil Fuel Activities	The exposure to fossil fuels activities refers to the degree to which an investment is involved in activities related to fossil fuels. The scope of activities includes the whole value chain where data is available. The 5% threshold is required by the SCS template for disclosure purposes and may not reflect how the product is managed. For thresholds as to how the product is managed, please refer to the product documentation.
ASIP Reporting	Our ESG Long Report is designed to align as closely as possible with the recommendation for the ESG reporting standard for pension funds of the Swiss Pension Fund Association (ASIP) and is continually striving to enhance this alignment. The key metrics are available for review in the following chapters: II. Exclusions, III. Sustainability Safeguards, V. Sustainability Preferences and VI. Climate Overview. Any dissemination or further distribution of any such information pertaining to SIX Index AG is prohibited.

Certain of the information contained in this document has been obtained by third parties. Neither Swiss Life Asset Managers, nor any entity of Swiss Life Group, nor any other person (including any of the directors of the mentioned entities, its employees, agents and/or shareholders) assumes any responsibility for the accuracy or completeness of such information. No representation, warranty or undertaking, express or implied, is made to the recipients of this document as to or in relation to the accuracy or completeness or otherwise of this document or as to the reasonableness of any assumption contained in this document.

This document has not been filed with, nor approved by, any regulatory authority of any jurisdiction. No regulatory authority has confirmed either the accuracy or the adequacy of the information contained in this document. Each addressee of this document shall request any internal and/or external necessary advice, including from any financial, legal, tax or accounting advisor, or any other specialist, in order to check that any potential investment complies with its objectives and legal, tax, financial, accounting or other constraints and in order to obtain an independent valuation.

This document does not constitute any offer to issue or sell, or any solicitation of any offer to (i) subscribe or purchase shares, units or other financial interests in investments or (ii) provide any investment services. This document is communicated to each recipient for information purposes only and does not constitute a personal investment recommendation. In addition, the information contained in this document does not constitute any investment advice, investment brokerage, investment recommendation or solicitation to acquire or sell investment units but is intended merely as a brief summary of the main features of the investment fund. This document does not necessarily deal with every important topic or cover every aspect of the topics with which it deals. It has been prepared without regard to the individual financial and other circumstances of persons who receive it. No guarantee is provided for the suitability and appropriateness of the investment fund presented herein nor for the economic and fiscal consequences of an investment in said investment fund and for its future performance. Investors are advised to seek independent advice before making any investment decision.

Neither Swiss Life Asset Managers, nor any entity of Swiss Life Group, nor any of its directors, employees, agents and/or shareholders, shall be liable for any financial loss or any decision taken on the basis of the information contained in this document.

Swiss Life Asset Managers has taken all reasonable care to ensure that the facts stated in this document are true and accurate in all material respects and that there are no other material facts the omission of which would make misleading any statement in this document. Certain of the information contained in this document has been obtained from published sources prepared by other parties. Neither Swiss Life, nor any entity of Swiss Life Group, nor any other person (including any of the directors of the mentioned entities, its employees, agents and/or shareholders) assumes any responsibility for the accuracy or completeness of such information. No representation, warranty or undertaking, express or implied, is made to the recipients of this document as to or in relation to the accuracy or completeness or otherwise of this document or as to the reasonableness of any assumption contained in this document.

Information containing any historical information, data or analysis regarding future development of ESG Aspects should not be taken as an indication or guarantee of any future developments, analysis, forecast or prediction. Past information about ESG Aspects does not guarantee future results or future development of any ESG Aspects. In no way does this constitute a guarantee of further positive development of ESG Aspects.

This document may contain "forward-looking statements", which express our assessment and expectations at a given point in time. However, various risks, uncertainties and other influencing factors can cause the actual developments and results to differ significantly from our expectations.

This document was produced with the greatest of care and to the best knowledge and belief.
Prior to any subscription, investors should obtain and carefully read the detailed information on the investment fund contained in the regulatory documentation for each fund (sales prospectus, fund contract or articles of association and the investment regulations, latest annual/interim reports, PRIIPs KID), which serve as the sole applicable legal basis for the purchase of fund units.

Any addressee of this presentation may request clarification and/or further information by contacting your contact points mentioned below.
