About PDFreactor

RealObjects PDFreactor is a powerful formatting processor for converting HTML and XML documents into PDF. It uses Cascading Style Sheets (CSS) to define page layout and styles. The server-side tool enables a great variety of applications in the fields of ERP, eCommerce and Electronic Publishing.

PDFreactor supports HTML5, CSS3 and JavaScript.

It allows you to dynamically generate PDF documents such as invoices, delivery notes and shipping documents on-the-fly. PDFreactor allows you to easily add server-based PDF generation functionality to your application or service. Since PDFreactor runs on a server, the end-user in general does not need any software other than a PDF viewer.

MANAGER COMMENTS

Global equities declined during the third quarter. Investors grew increasingly nervous about China-based property developer Evergrande possibly defaulting on its debt. Added to this were worse-than-expected macroeconomic data and rising prices leading to fears of higher interest rates. US and UK government bond yields increased significantly in September as central bankers reasserted their commitment to tackling inflation, despite months of dismissing price rises as transitory. The best performing assets over the quarter were linked to the rising oil & gas prices. Elsewhere, Japanese equities managed to buck the trend thanks to an improving Covid-19 vaccination programme, which meant the 'state of emergency' was lifted in September for the first time since April. This bolstered investor sentiment.

Against this backdrop, global funds were among the portfolios' top performers, including the Sarasin Responsible Global Equity Fund and Sarasin Tomorrow's World Multi-Asset Fund. Within the former, positive contributors included ASML, the world leader in lithography equipment, which is vital to the semiconductor industry. The global chip shortage and subsequent increase in semiconductor factory construction, continue to drive demand for ASML's unique extreme ultraviolet lithography machines.

A hawkish move by the Bank of England (BoE) —expressing their concerns over rising inflation — led to fears of a possible hike in interest rates before the end of the year. This caused UK government bond yields to move sharply higher. It resulted in a negative return for the portfolio's holding in the Vanguard UK Government Bond Fund.

During the quarter, we took profits in some equity holdings that had posted strong returns since the pandemic-related lows of Q1 2020. In turn, we increased the portfolio's cash holding, which should enable us to take advantage of any potential dips in equity markets over the coming months.

AN OVERVIEW

The Sarasin Model Portfolios

- Offer a choice of 5 Risk Rated, Multi Manager, Multi Asset Portfolios
- Available on most retail platforms
- Independently Risk Rated by Distribution Technology & Defaqto
- Active Asset Allocation and Fund Selection using a blend of Passive and truly Active Funds

[3] In line with ESMA guidance, we have included the concept of "slippage" within our transaction costs. This is a theoretical cost based on the price difference between the mid-price at the time an order was placed compared to the actual transaction price. Since Brexit, it is unclear whether the FCA will require firms to include slippage going forward, and we are aware that the majority of our competitors presently do not. We would ask that this is kept in mind when comparing our costs with other firms, as slippage can add between 0.07% to 0.21% to transaction costs depending on the model portfolio.
