SWISS CLIMATE SCORES

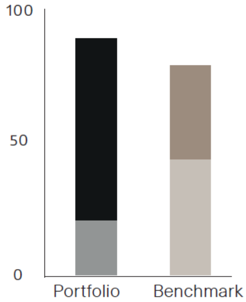
Swiss Climate Scores Report

Current State

1. Greenhouse Gas Emissions

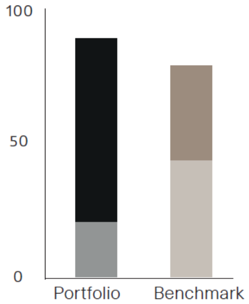
Encompasses all sources of greenhouse gas emissions from invested companies (scope 1-3), including relevant emissions of their suppliers and products.

Intensity
tCO2e/CHF million revenue



- Scope 1 and 2 (89 % coverage)
- Scope 3 (65 % coverage)
- Scope 1 and 2 (91 % coverage)
- Scope 3 (80 % coverage)

Footprint
tCO2e/CHF million revenue



- Scope 1 and 2 (89 % coverage)
- Scope 3 (65 % coverage)
- Scope 1 and 2 (91 % coverage)
- Scope 3 (80 % coverage)

Medium estimation uncertainty

2. Exposure to fossil fuel activities

There is scientific consensus of the need to phase-out coal and stop financing new fossil fuel projects. Below figures show the share of investments into companies that earn more than 5% of their revenues from such business activities.

Share of investments into companies with activities in **coal**:

0,0 % Portfolio **2,1 %** Benchmark

Share of investments into companies with activities in other **fossil fuels**:

0,0 % Portfolio **2,1 %** Benchmark

Low estimation uncertainty

Transition to net zero

3. Global warming alignment

Science-based consensus

- below 1,5 °C
- below 2,0 °C
- below 3,0 °C
- below 4,0 °C
- over 4,0 °C

2,7 ° Portfolio **3,2 °** Benchmark

Portfolio assets covered: **93,75 %**
Climate scenarios used: **Scenario X**
Data model: **Implied Temperate Rise**
Data provider: **MSCI ESG Inc.**

High estimation uncertainty

This is the level of global warming that would occur if the global economy acted with the same ambition as the companies in the portfolio. Some portfolios with climate objectives may intentionally include investments in companies that are not yet on track to 1.5°C, but seek to contribute actively to climate goals by improving the alignment of investee companies to bring a larger share of the economy into alignment over time.

4. Verified commitments to net zero

Companies are increasingly committing voluntarily to transitioning to net zero and setting interim targets. The effectiveness of such commitments depends on whether interim targets are credible, science-based and transparent.

Share of companies in portfolio with verified commitments to net zero and credible interim targets:

89 % Portfolio **89 %** Benchmark

Low estimation uncertainty

5. Management to net zero

Financial institutions can contribute to the transition to net zero by aligning their investment strategy with a consistent 1.5 °C decarbonisation pathway.

Does the investment strategy include a goal to reduce the greenhouse gas emissions from its underlying investments through concrete short-term (1–3 years) or midterm (5 years) targets?	Yes
Is the portfolio part of a third-party verified commitment to net zero by the financial institution including credible interim targets?	Yes

6. Credible climate stewardship

Financial institutions can contribute to the transition to net-zero, by engaging with invested companies on third-party verified, sciencebased net-zero aligned transition plans until 2050.

Are companies in the portfolio subject to credible stewardship on climate transition?	Yes
Share of companies currently under active climate engagement	10 %
Share of climate votes supported:	10 %
Link to climate stewardship strategy and report:	www.url.ch
Is the financial institution a member of a climate engagement initiative?	Yes, Climate Action 100
