

GUIDELINES ADDENDUM

FOR INVESTMENT MANAGEMENT 2023

INTRODUCTION

This addendum to the master brand guidelines shows how to use the top-level brand elements to appropriately express our Investment Management brand. This document should be used to complement the full guidelines, which offer additional detail on the overall brand system.

Brand concept

The core concept for Investment Management is one of active innovation and adaptability. With a distinctly broad view of the market, Investment Management sees every angle and is able to push the limits, constantly moving forward and growing – and doing both responsibly. Because this is a high-end offering from a trusted authority in the field, our brand expression for Investment Management always needs to feel premium and grounded.

Defining elements

- **Layout:** The kinetic type directly engages with image edges. Images and color blocks should only bleed off one edge of a layout, further enhancing the sense of a business that is pushing the limits.
- **Typography:** Bold, confident kinetic headlines set with Druk and Publico convey movement and adaptability.
- **Photography:** Metaphorical imagery speaks to business themes while still adhering to the brand principles of symmetrical compositions and colors.
- **3D graphics:** Like photography, 3D illustrations adhere to the brand standards, speaking metaphorically to business themes and concepts.
- **Color:** Use of brand teal and white space grounds Investment Management within the trusted and responsible space of the corporate brand, while highlights of light blue, pink, orange and yellow help create rich and exciting layouts.

Logo

01.

LOGO

Overview

The horizontal logo is our primary logo format. It highlights our values and supports our changing needs.

The horizontal layout and arrow emphasize our forward-thinking momentum and streamlined efficiency. This logo was designed to thrive in digital contexts.

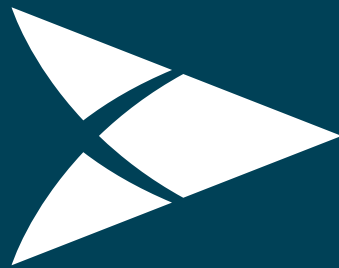

LOGO

Components and principles

Our logo is our signature, a unique mark that consists of two parts: the arrow symbol and the name (or wordmark), “BNY Mellon Investment Management”. These parts should always be used together in the original lockup proportion; the spacing between elements should never be changed.

The arrow suggests confidence, forward motion and a positive outlook, while the slab-serif typeface of the wordmark conveys stability, strength and gravitas.

Always use the logo as described in these guidelines.

LOGO

Misuse

Our logo should be used consistently and strategically to help convey our values and ensure our brand is recognisable. Always use the official logo assets. Here are examples of the misuse of our logo that make it off-brand.

Do not make the logo so small that the spaces between the letters or in the arrow run together; the logo should always be easily legible.

Do not recolour any parts of the arrow or the wordmark.

Do not use the logo on backgrounds that provide insufficient contrast for legibility of all logo components. Instead, select the appropriate logo version.

Do not separate any elements of the logo or use parts of the logo separately. Instead, the logo should be used in its proper configuration and spacing proportions. In addition, the arrow symbol should never be used alone.

No new or custom logos or lockups.

Do not place type too close to the logo, where it might appear to be a tagline or lockup.

LOGO HIERARCHY

All material issued by BNY Mellon Investment Management

Where documents are dual branded, the BNY Mellon Investment Management logo and the Investment Firm logo sit next to each other or stacked, with a 0.5pt dividing line between them, as shown.

Grid

03.

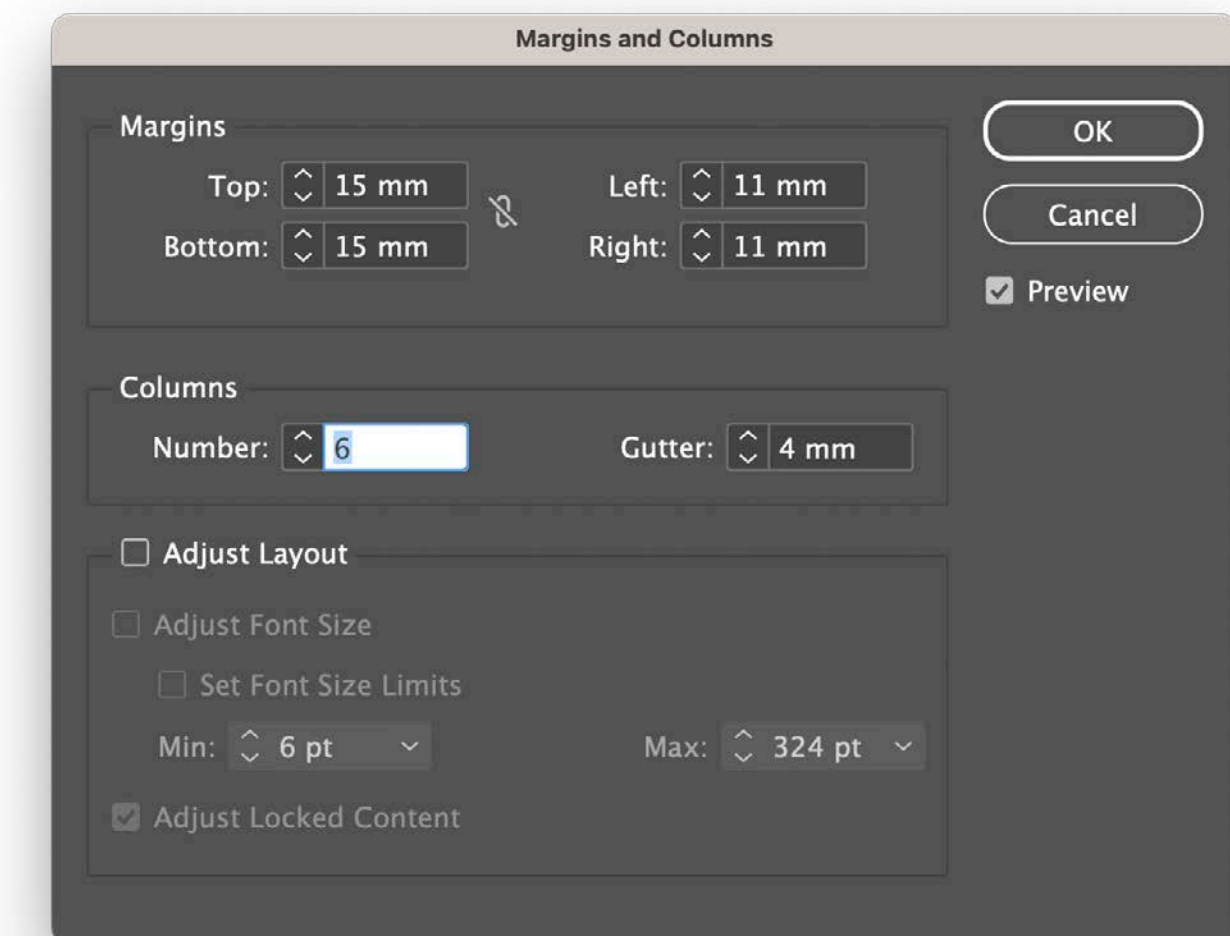

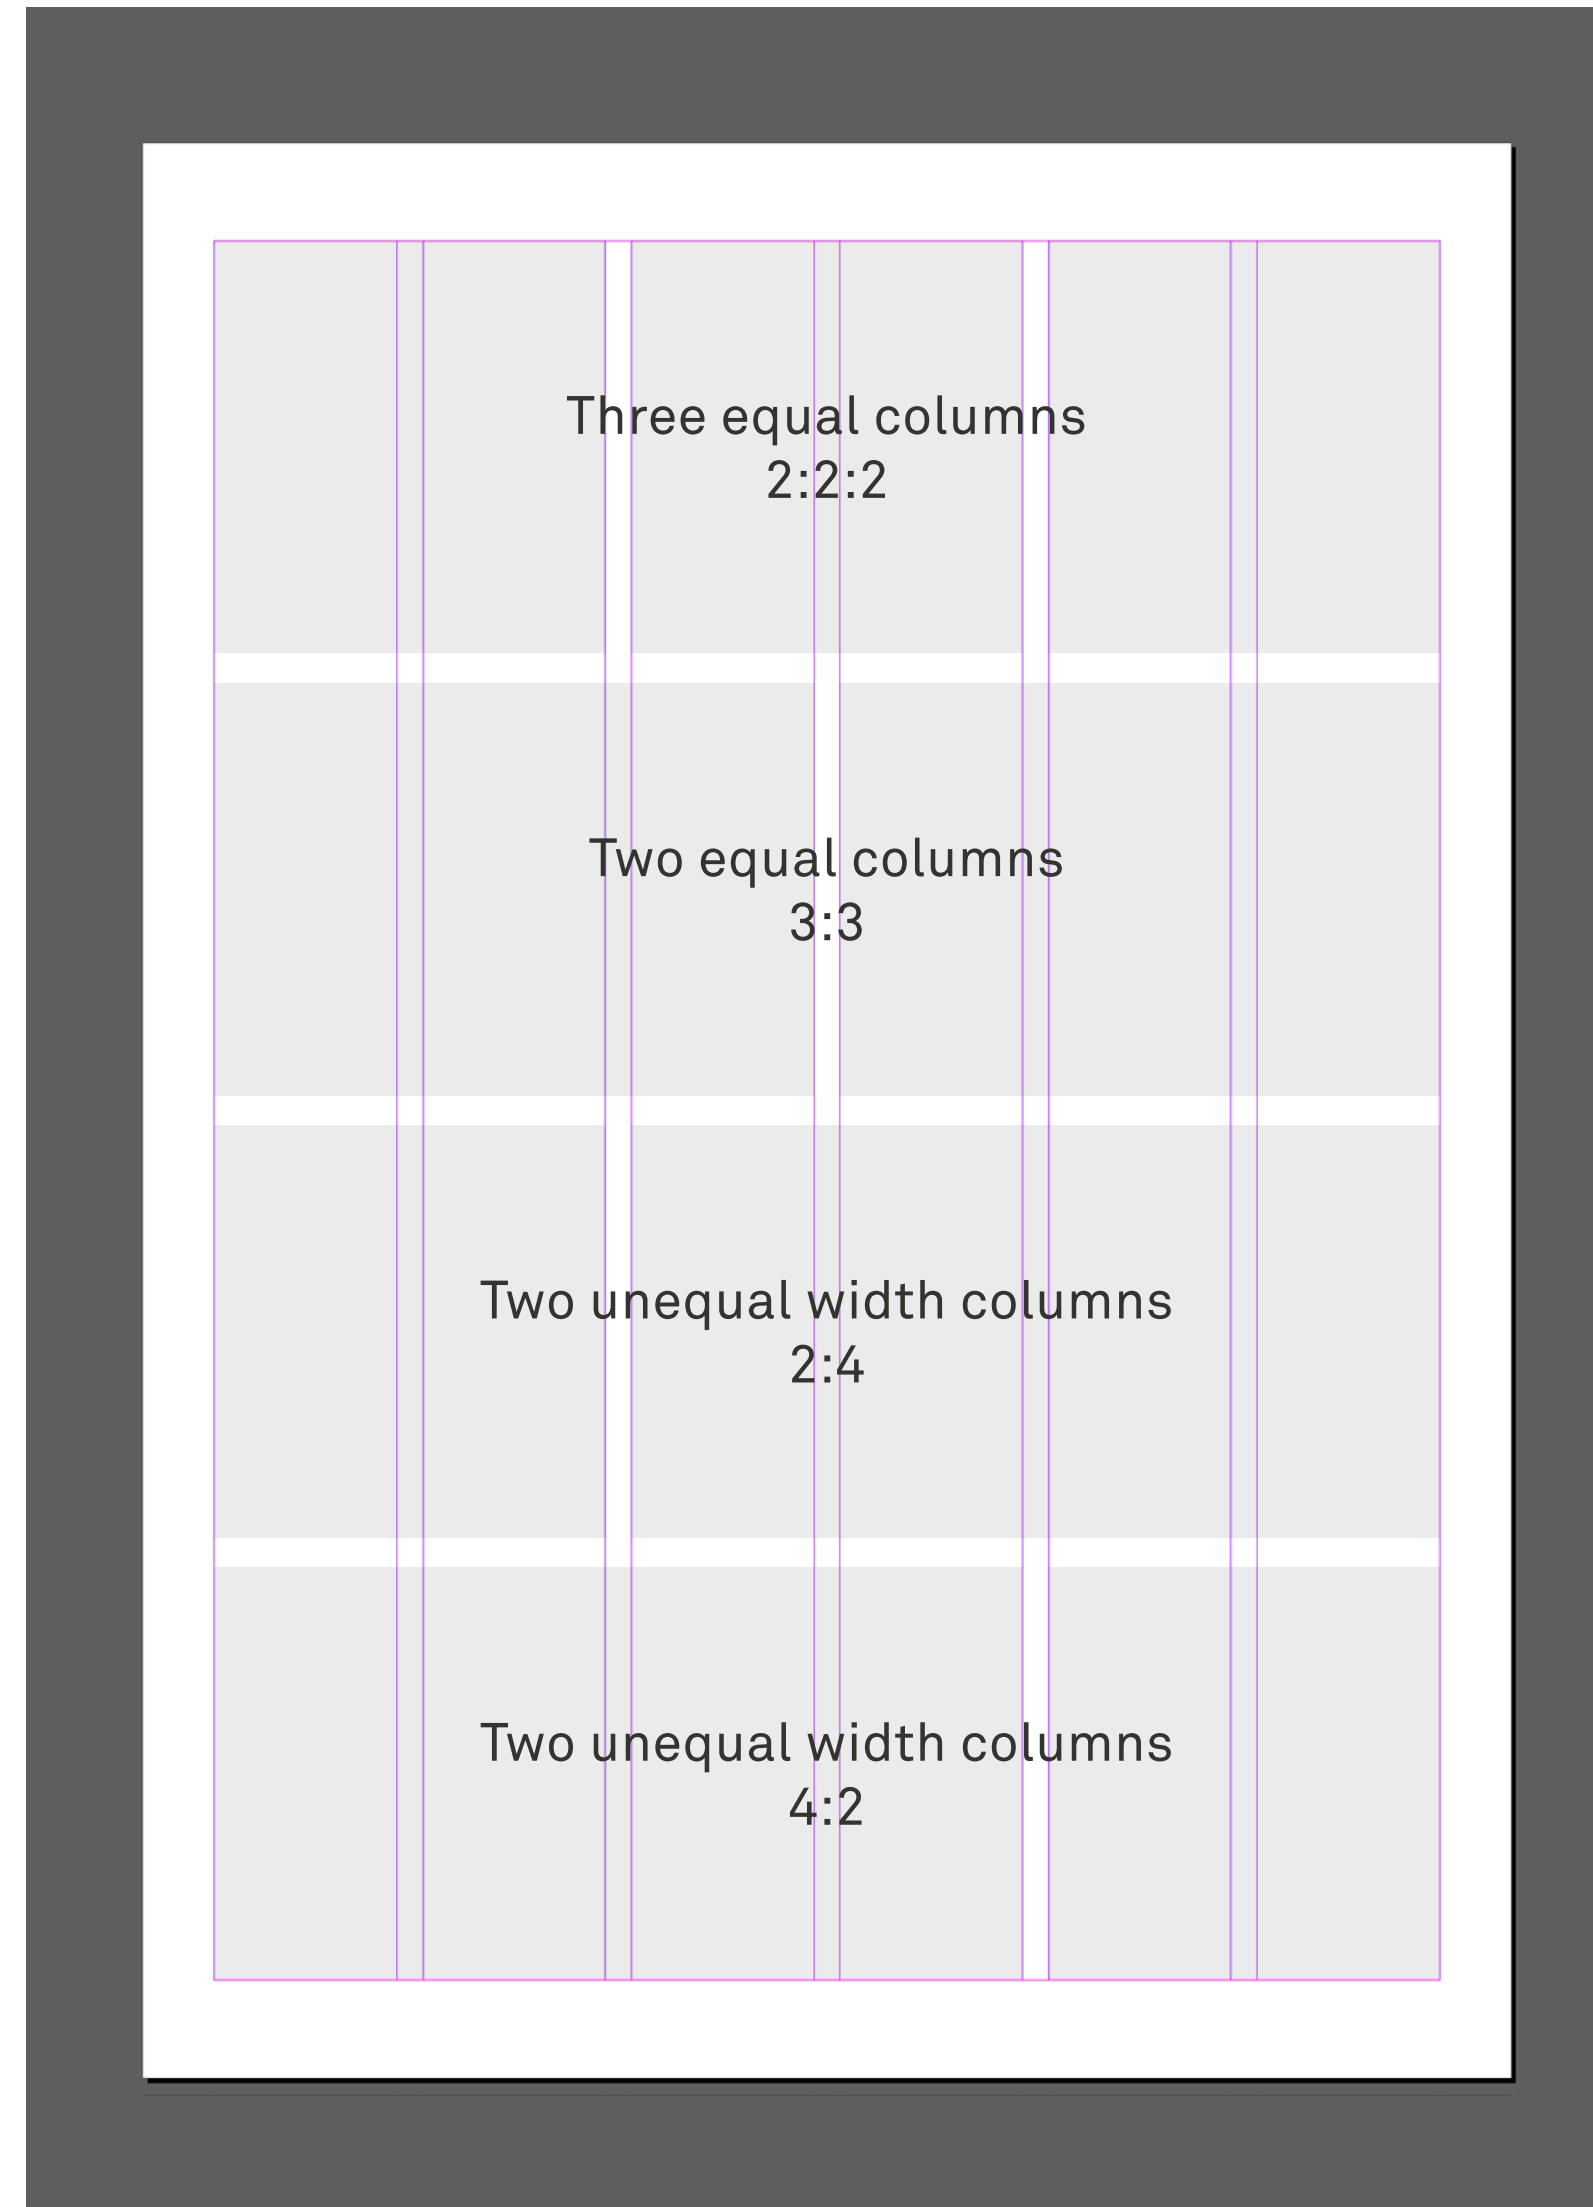

GRID

Single page document column grid

This versatile six column grid layout can be used for various documents as it will allow the designer to create layouts with text in two or in three equal columns extending from the left to the right margins.

The use of a six column grid allows the layout to be also used in a more dynamic way with uneven columns width such as 2:4 or 4:2.

Do not use this grid with a ratio of 5:1 column width.

GRID

Single page document running headers and page numbers

When on a single page document, it is important to keep all running heads and page numbers in the same place as this will help the reader to easily navigate the document.

Running Head

Druk Bold

TRIP NOTE JAPAN

01

--	--	--	--	--	--	--

Page Number

Druk Bold

GRID

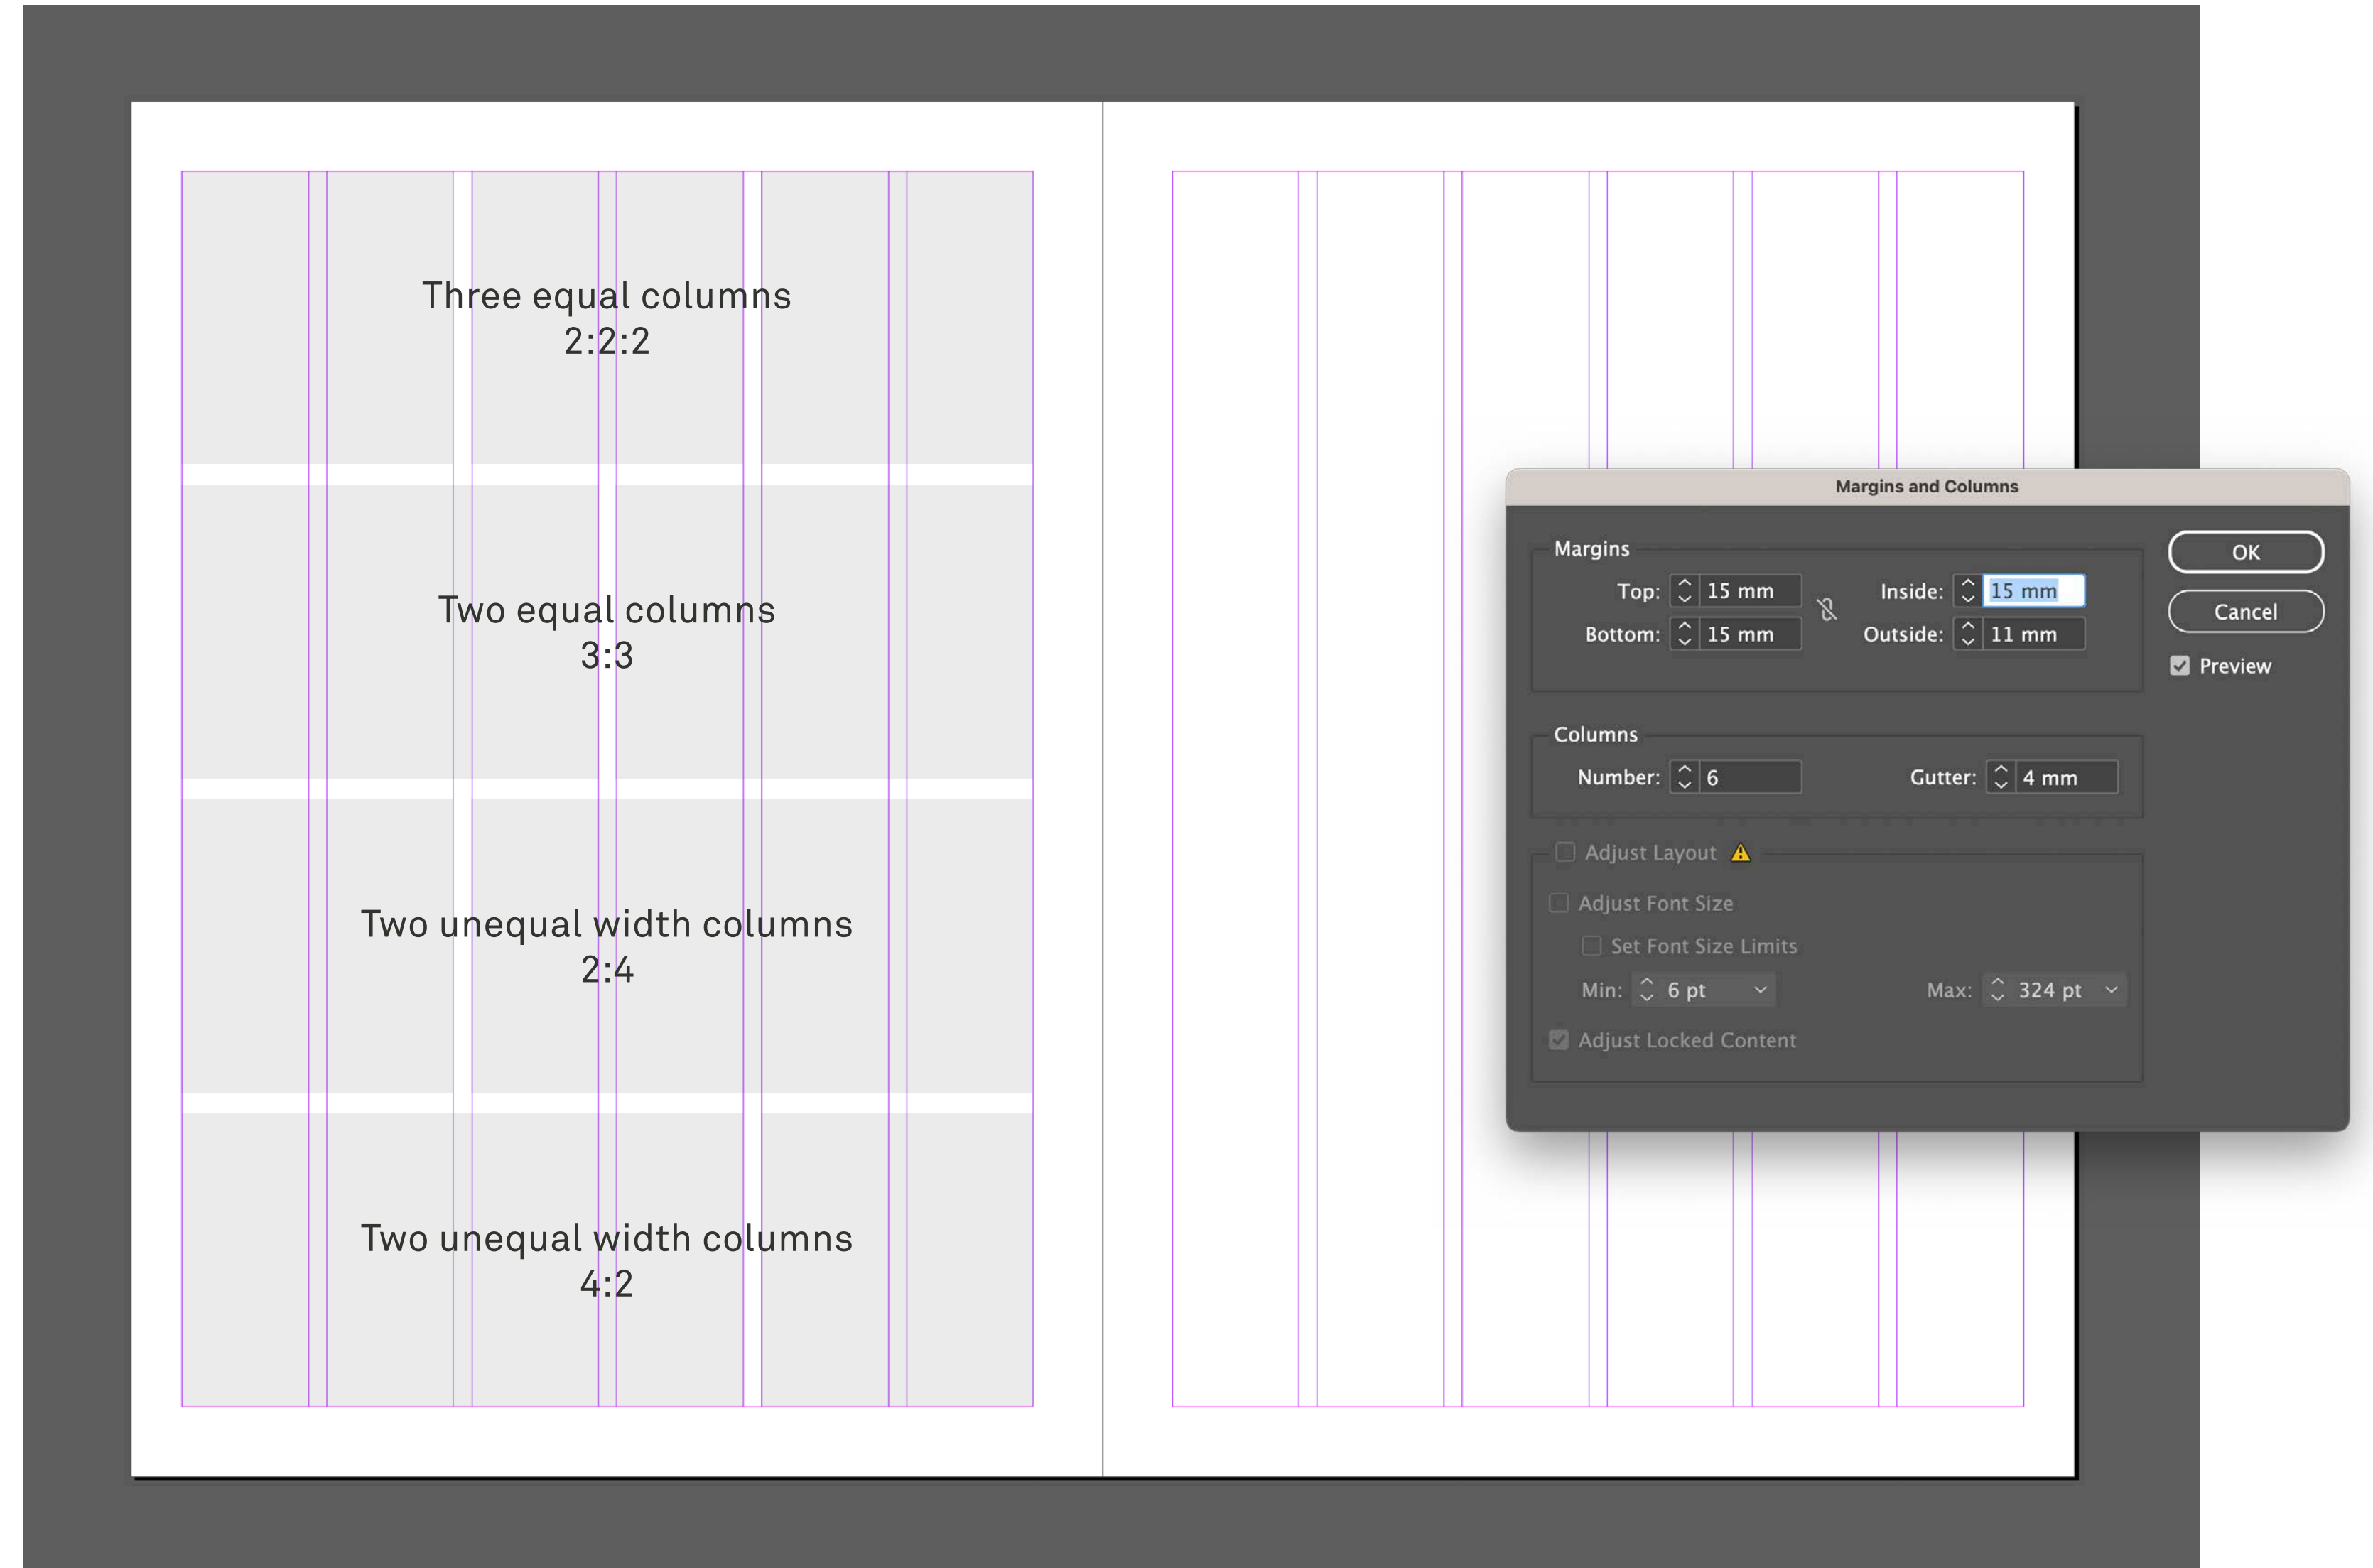

Double page document column grid

When used as a double page the grid will change its internal margin to allow for binding when printing is required.

The use of the column layout remains the same as for the single page layout:

- Two equal columns 3:3
- Three equal columns 2:2:2
- Uneven columns width 2:4 or 4:2.

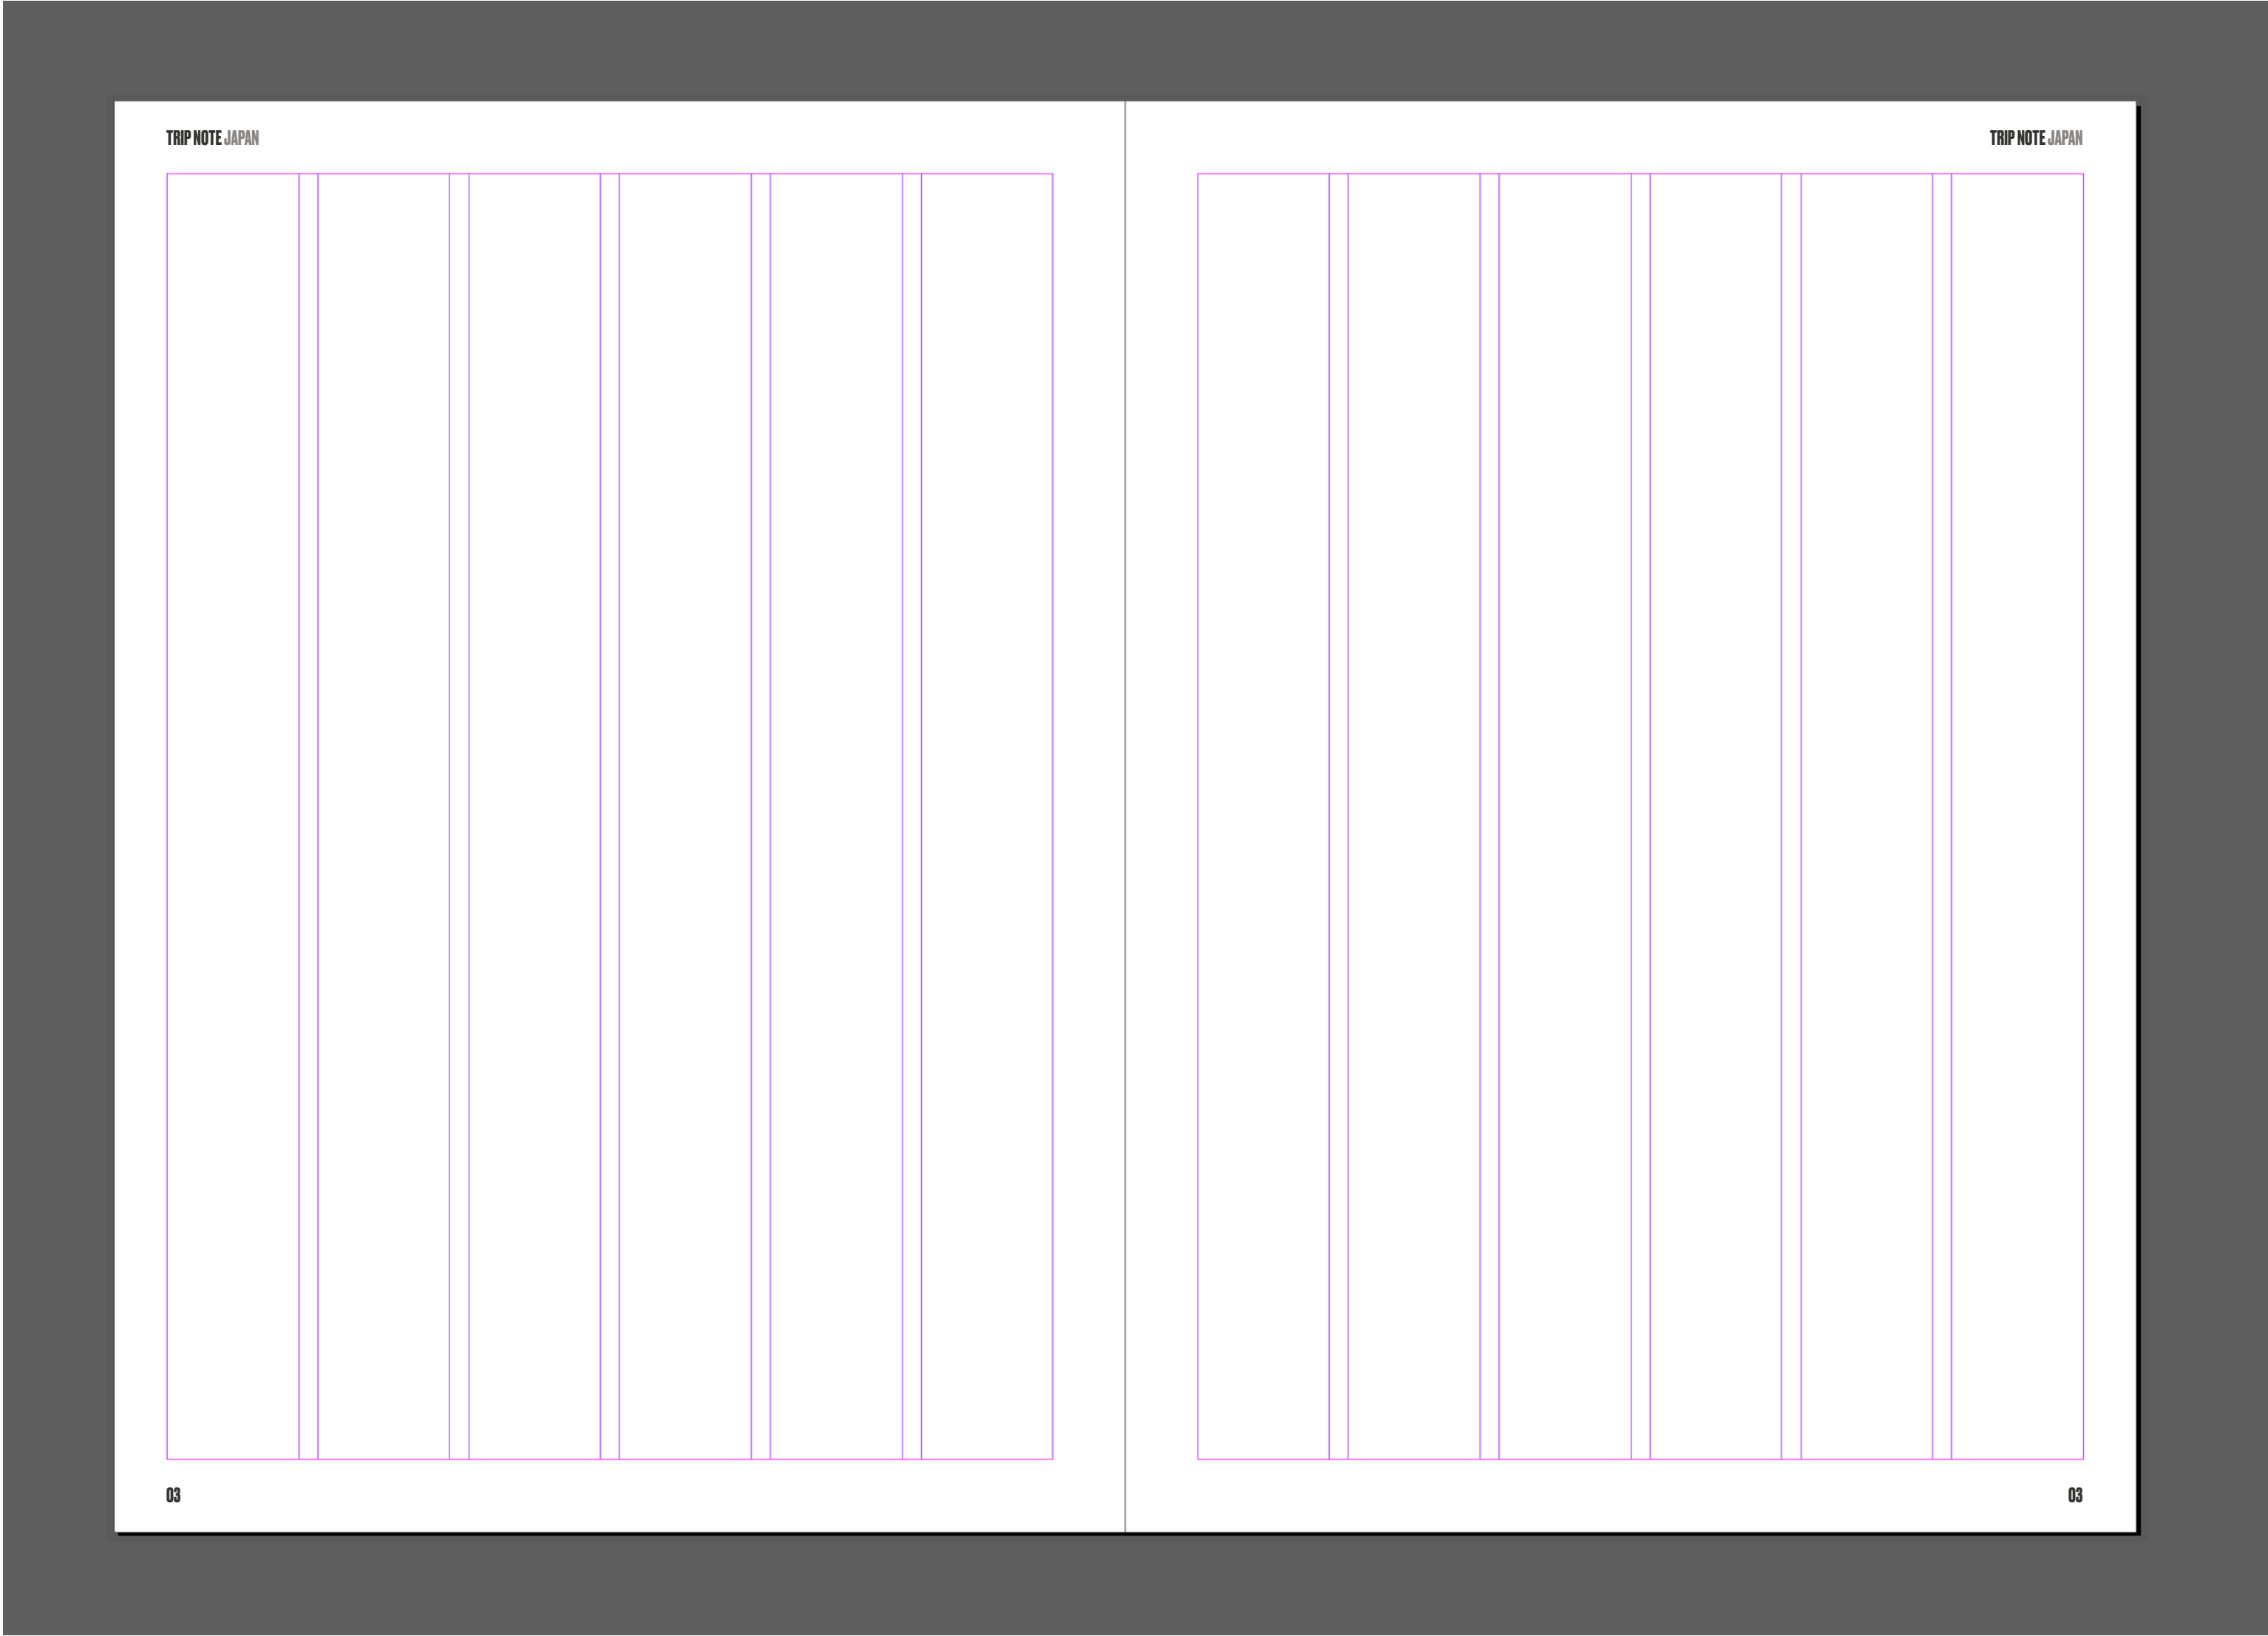

Do not use this grid with a ratio of 5:1 column width.

GRID

Double page document running headers and page numbers

When on a double page document,
a more traditional positioning for
headers and page numbers will make
sure the reader can identify these
elements easily.

TYPOGRAPHY

Institutional Font

The new headline typeface, Druk Bold, will be used in addition to the brand typefaces Publico and Akkurat. Publico and Akkurat offer sophistication, while Druk adds a sense of boldness and dynamism. This compressed sans serif speaks with confidence and efficiency when used in all caps. When used in large headlines or numerals, Druk Bold Outline can be used in addition to the standard filled version.

For clear hierarchies and expressiveness, employ substantial differences in scale between headlines, subheads and body copy. Half scales are a useful standard. For example: A 72-point headline would have a 36-point subhead and 18-point body copy. Adjust this ratio as needed for content length and specific layout needs.

TYPOGRAPHY

Usage on covers - A4 as example

Covers can use 3 typographical elements:

- Title in Druk Bold CAPS
- Subtitle in Publico Headline
- Disclaimers in Akkurat pro

The title is always stacked in two lines with the second line indented.

The second part of the tile is always aligned to the edge of the picture as shown on this page.

For the colour, please refer to examples on page 31.

COLOUR

Investment Management palette

Our dynamic palette distinguishes us from our competition with its modern tones. The new colour system is made of a primary colour ‘teal’ and a secondary colour ‘slate’ (new).

Building on the existing complementary pairing of the teal and orange, additional pairings of **accents** have been provided: yellow, light blue and pink. These new accents are used with the primary teal colour to give an expressive touch to the BNY Mellon Investment Management brand.

Colours are to be utilised in **combinations** as shown on this page. Accents are only to be applied in the prescribed colour pairings. There should never be more than one accent colour per composition.

Our background colour may be used for infographics or as an alternative cover colour (see from page 55).

INVESTMENT MANAGEMENT CHARTING

Colours

Due to the nature of the infographics, an extended color palette was created containing tints of the original colors for EMEA.

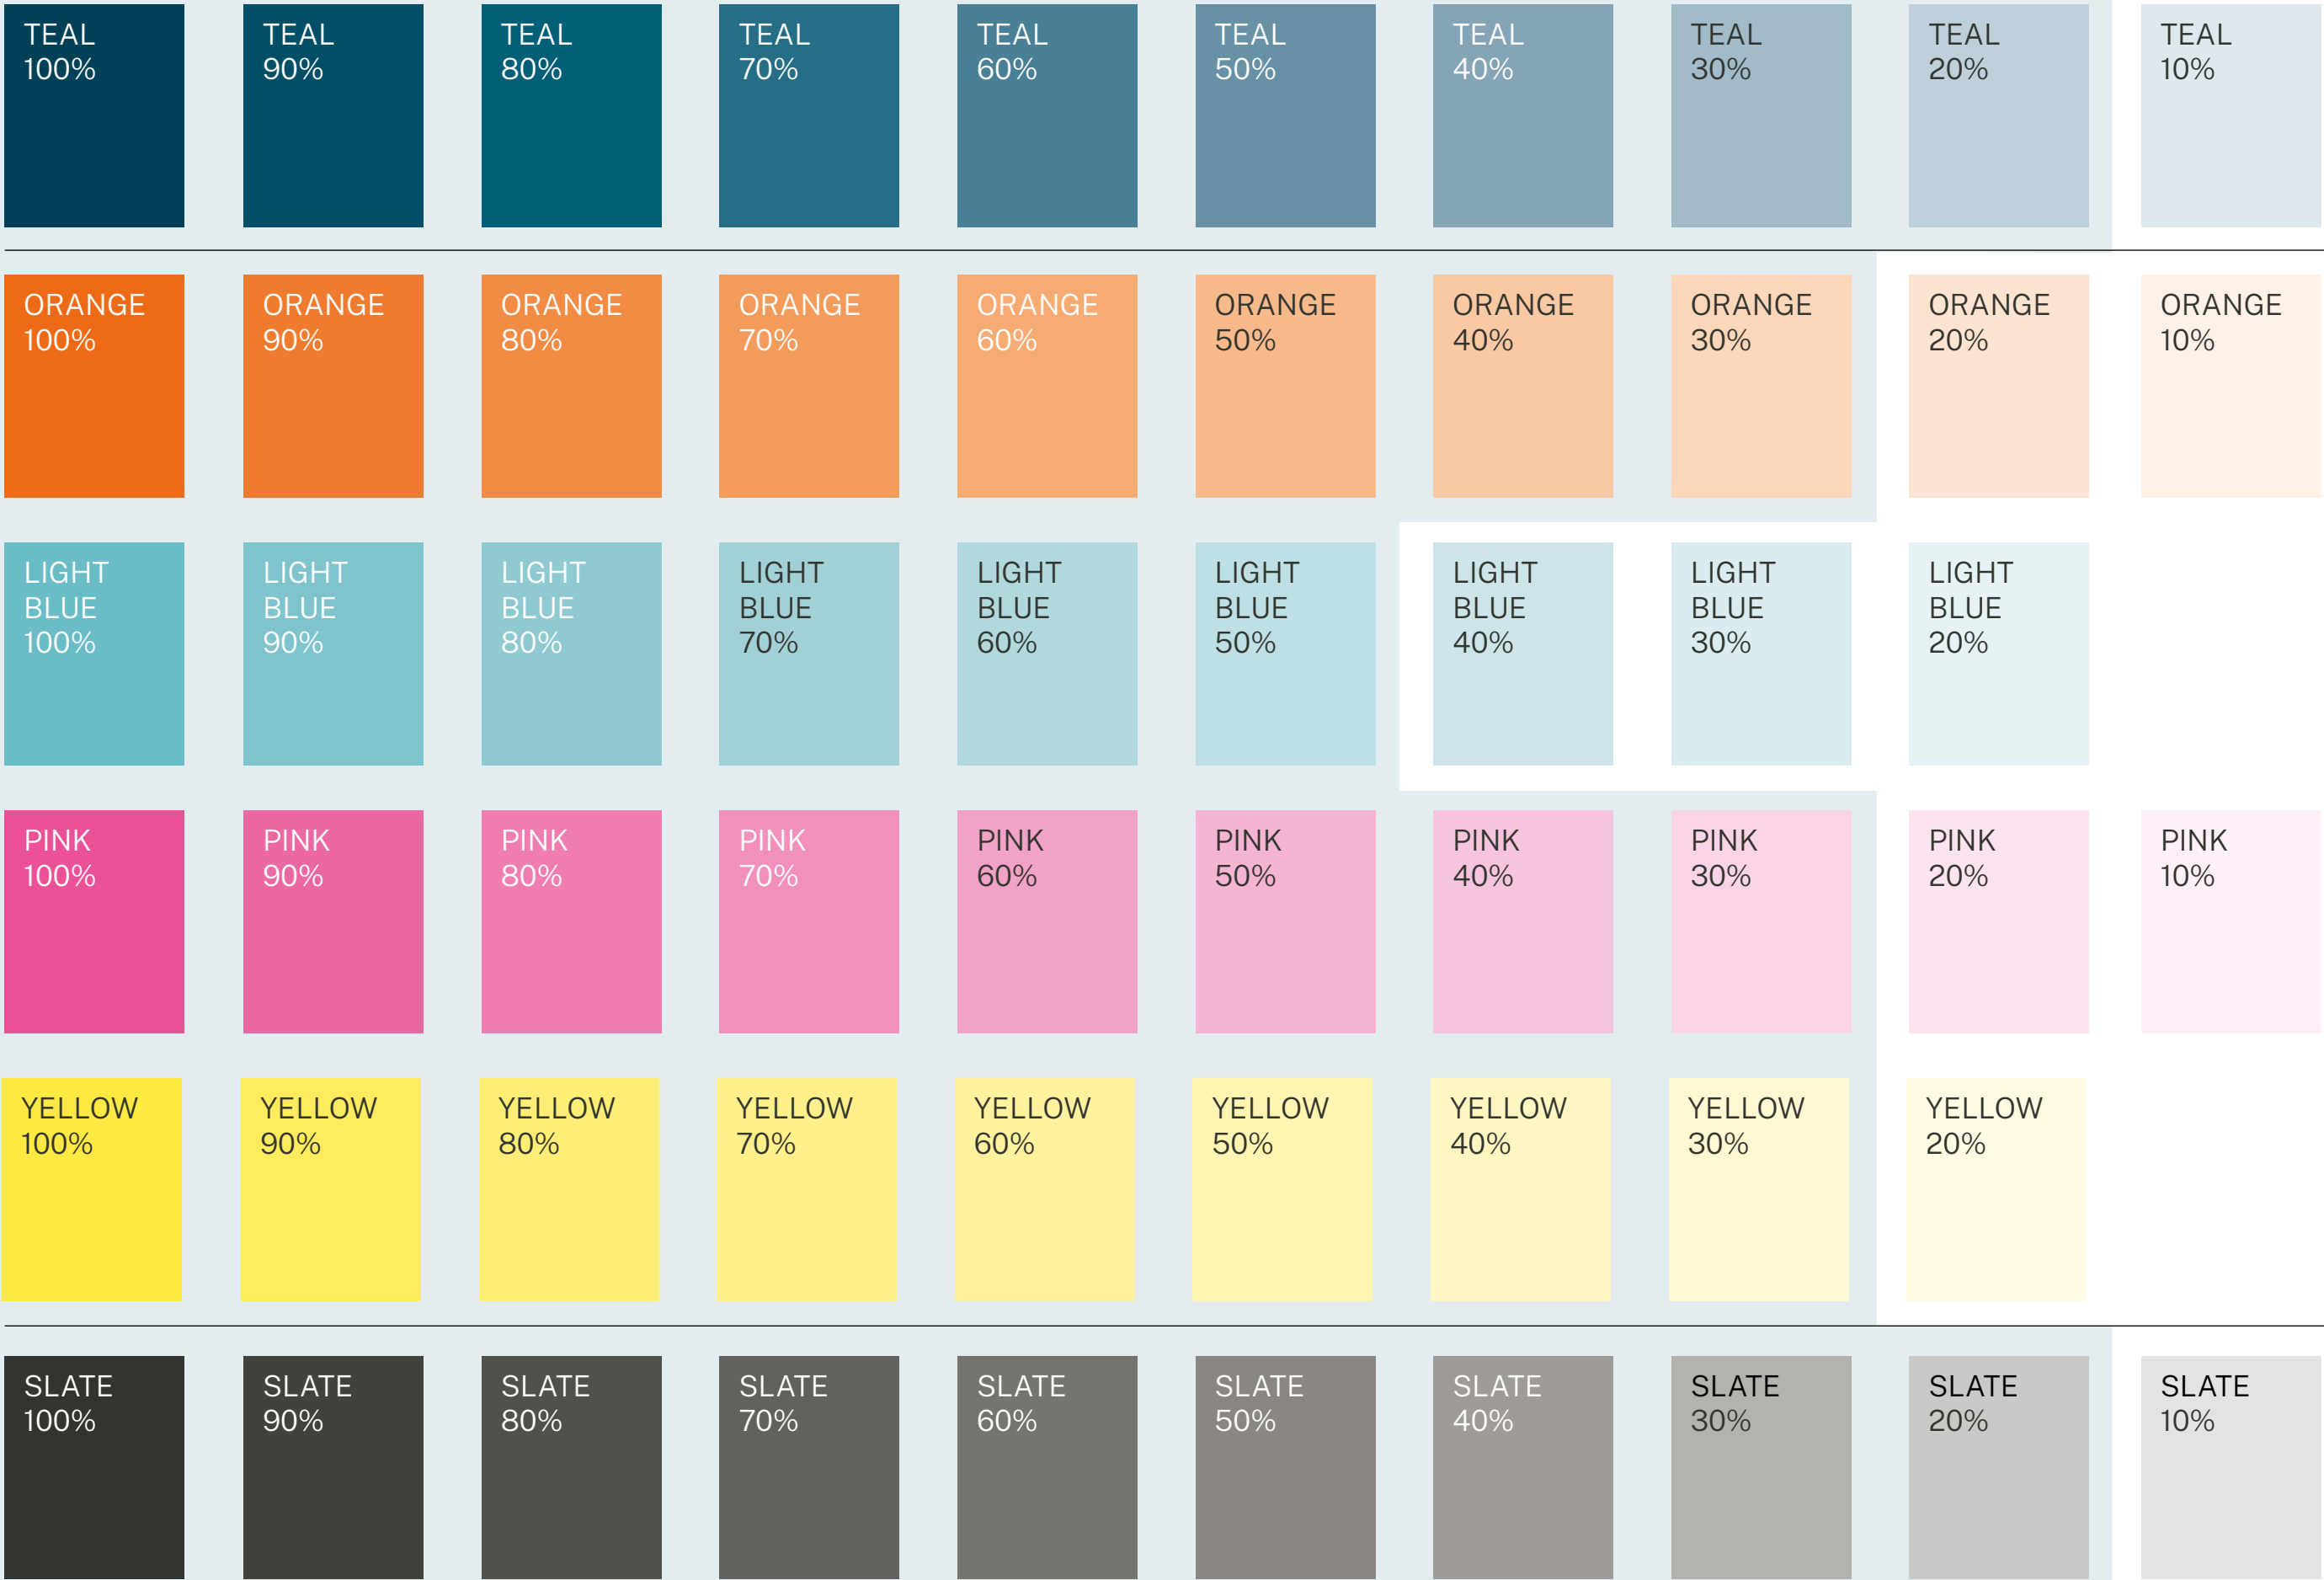

The colors are applied following a logical preference. The primary color should remain Teal followed by the preferred color accent, closing with the secondary color Slate.

In cases where more colors are needed and therefore there is a need to use a second accent color, the same logic will be followed, in the order expressed below:

- 1. primary color
- 2. preferred accent color
- 3. second additional accent color
- 4. secondary color

Some tints can be used only on white background to allow for contrast.

ORDER OF USE TOP TO BOTTOM

Can be used on background colour

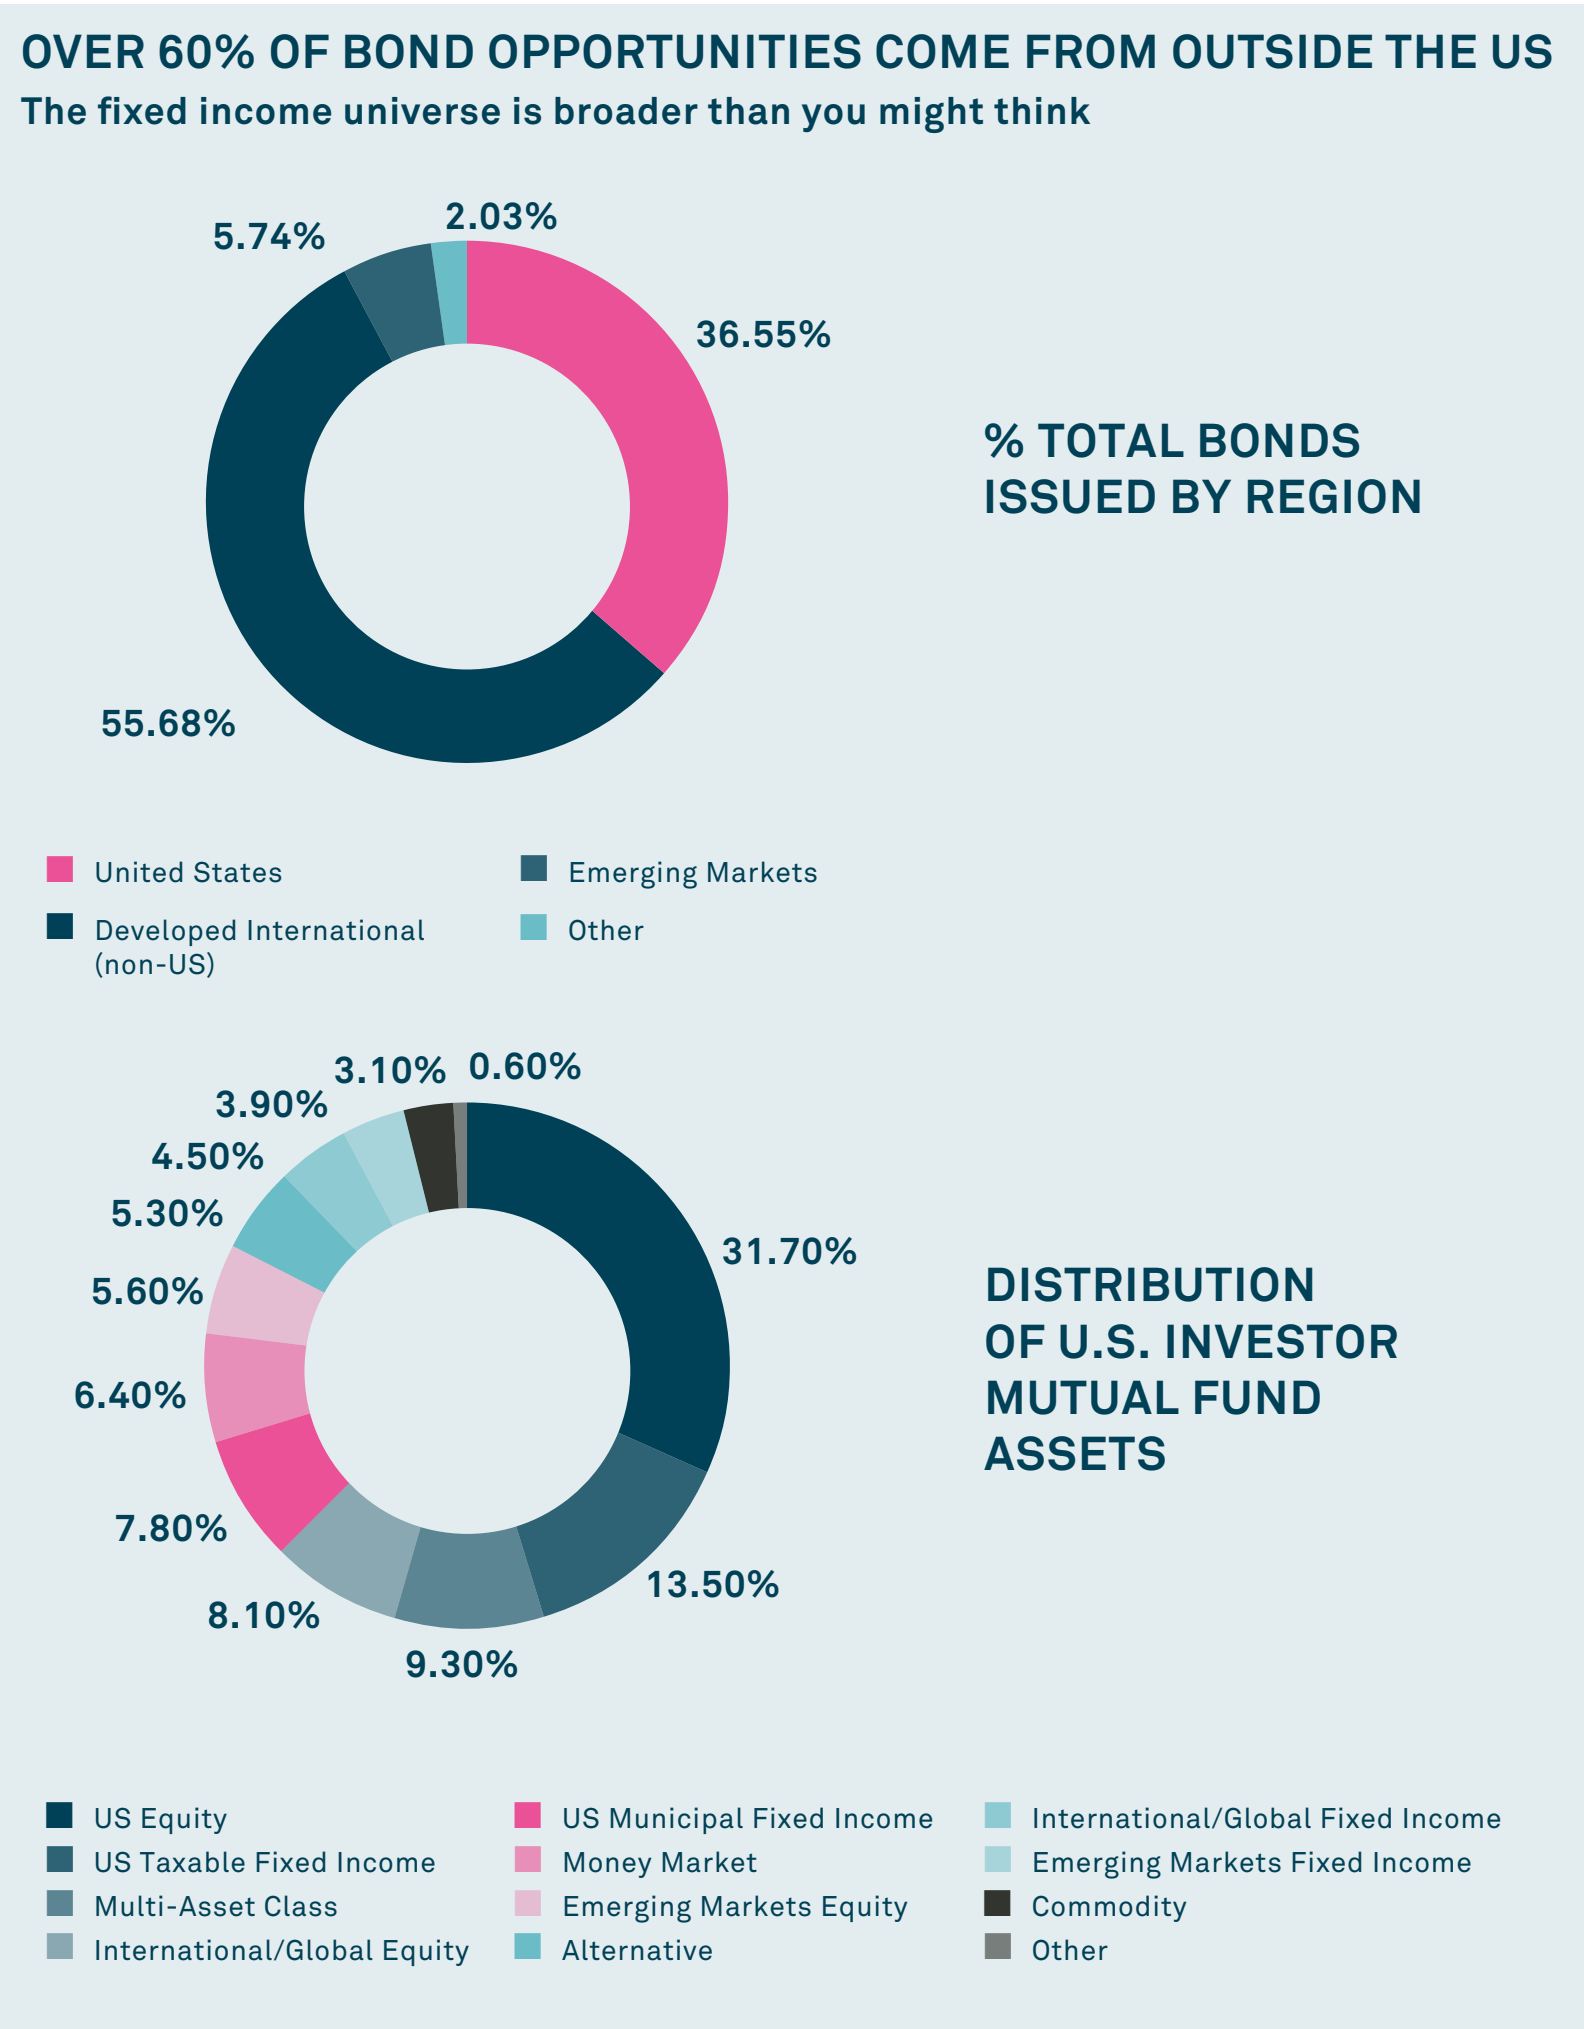

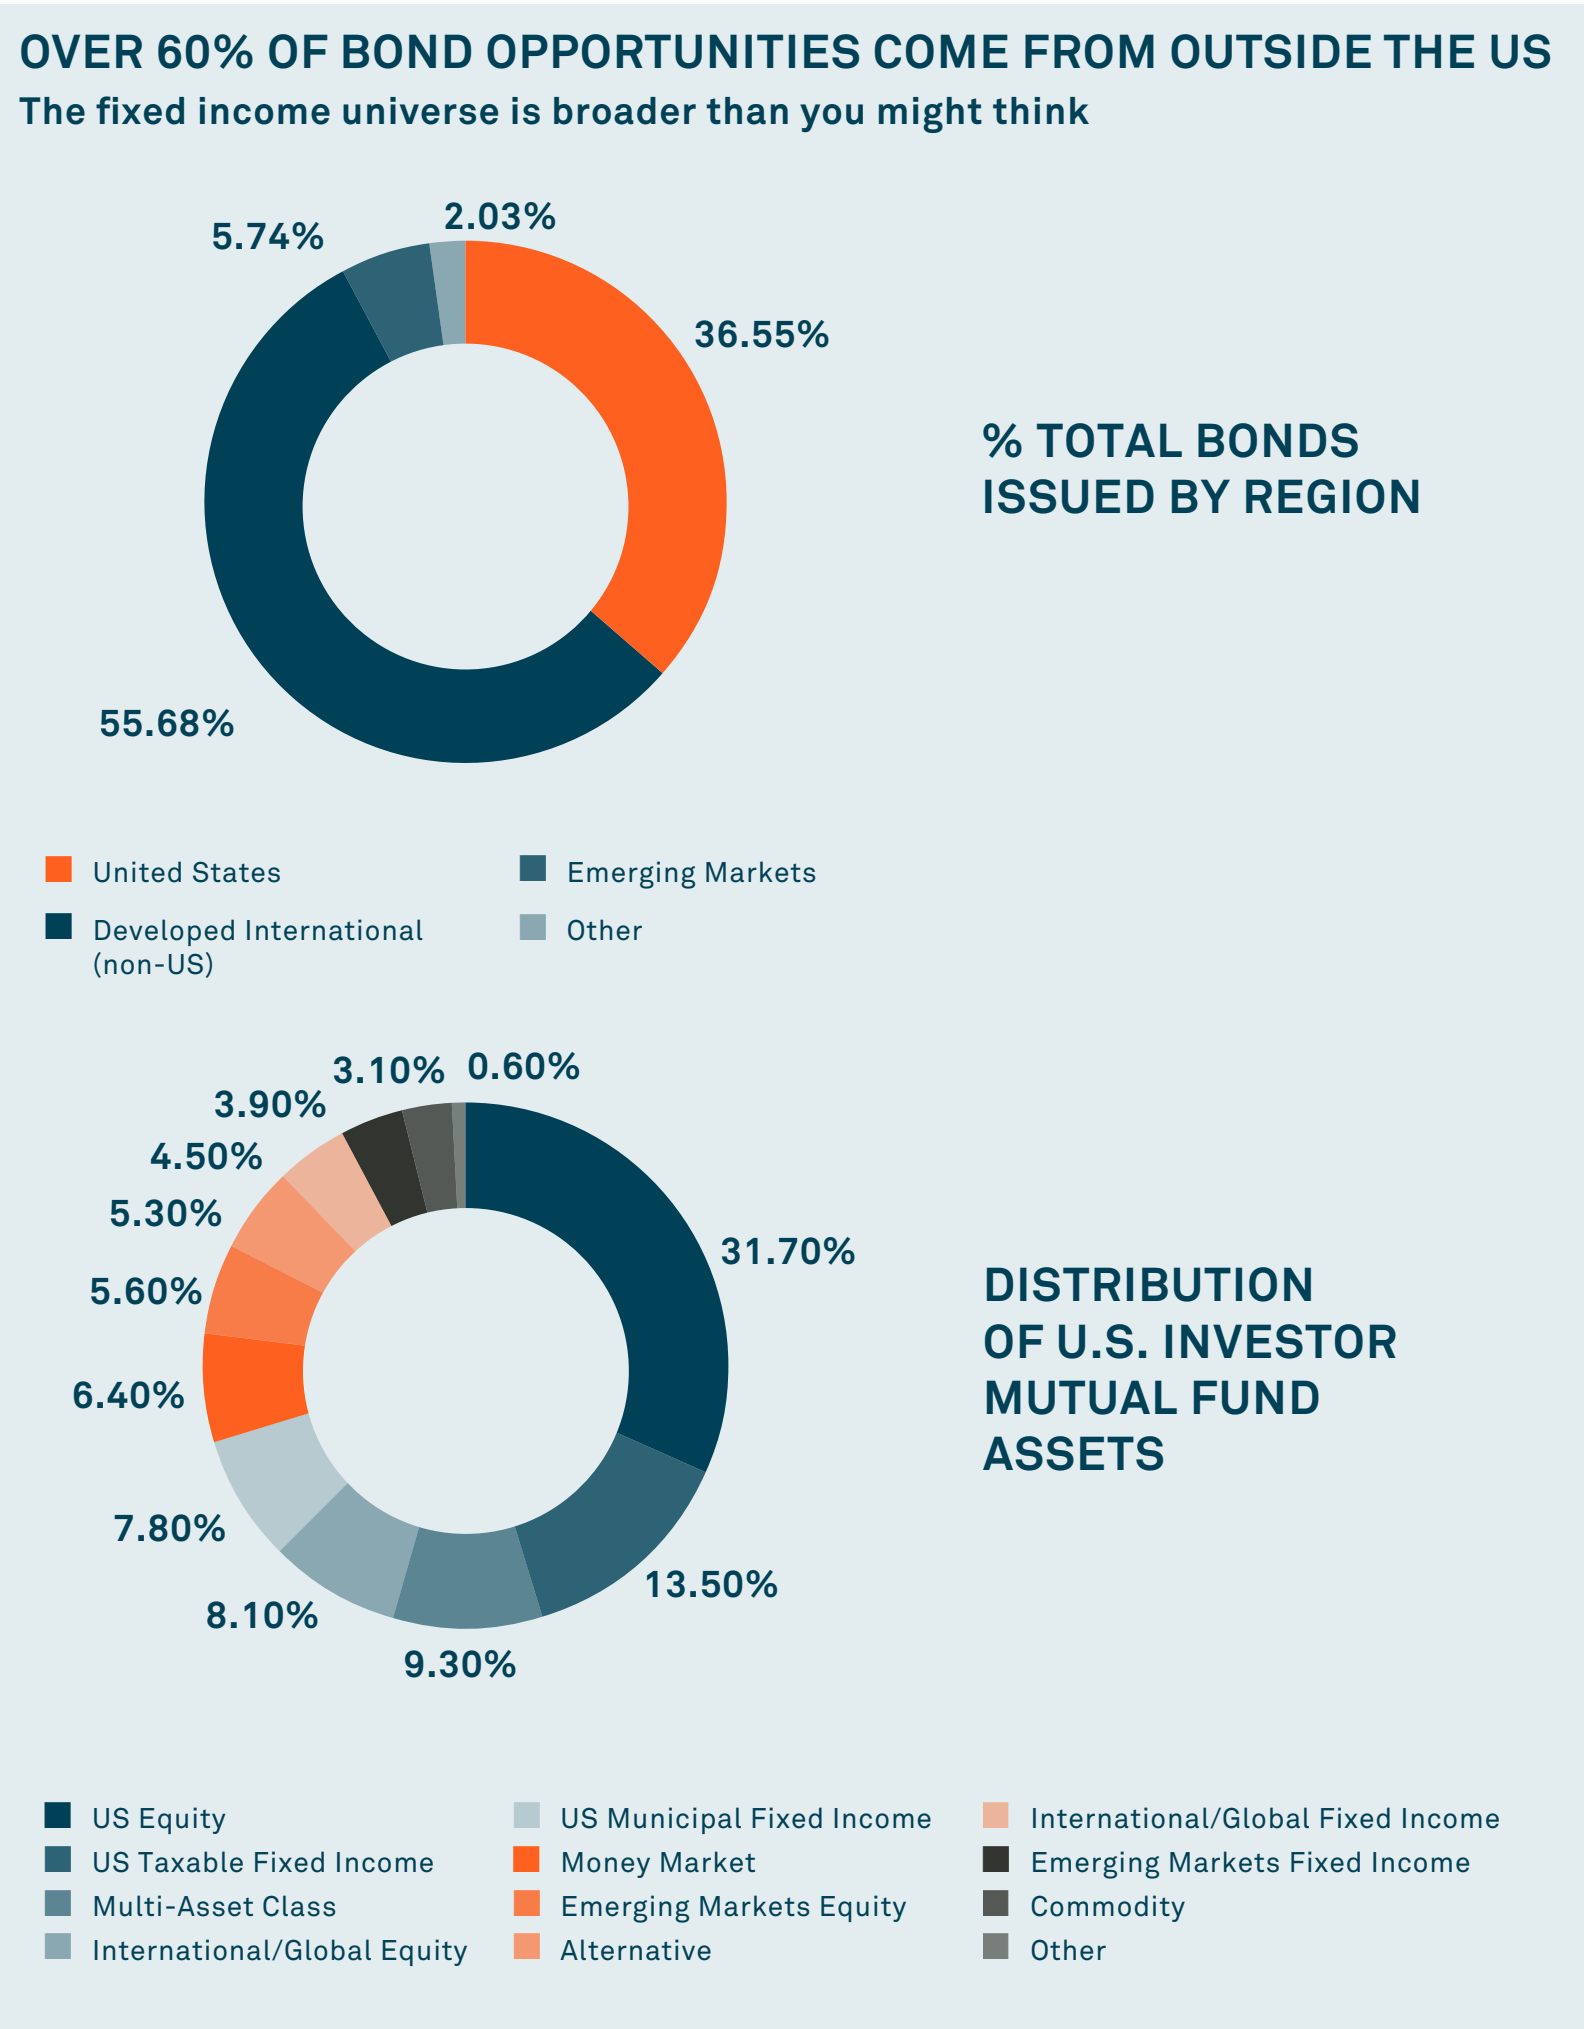

Only on white background

Use only one accent at time.

Cases in which more colours are needed, Light Blue MUST be used as third colour in the order of use (see page 34 for reference)

Photography,
3D Graphics and
Patterns

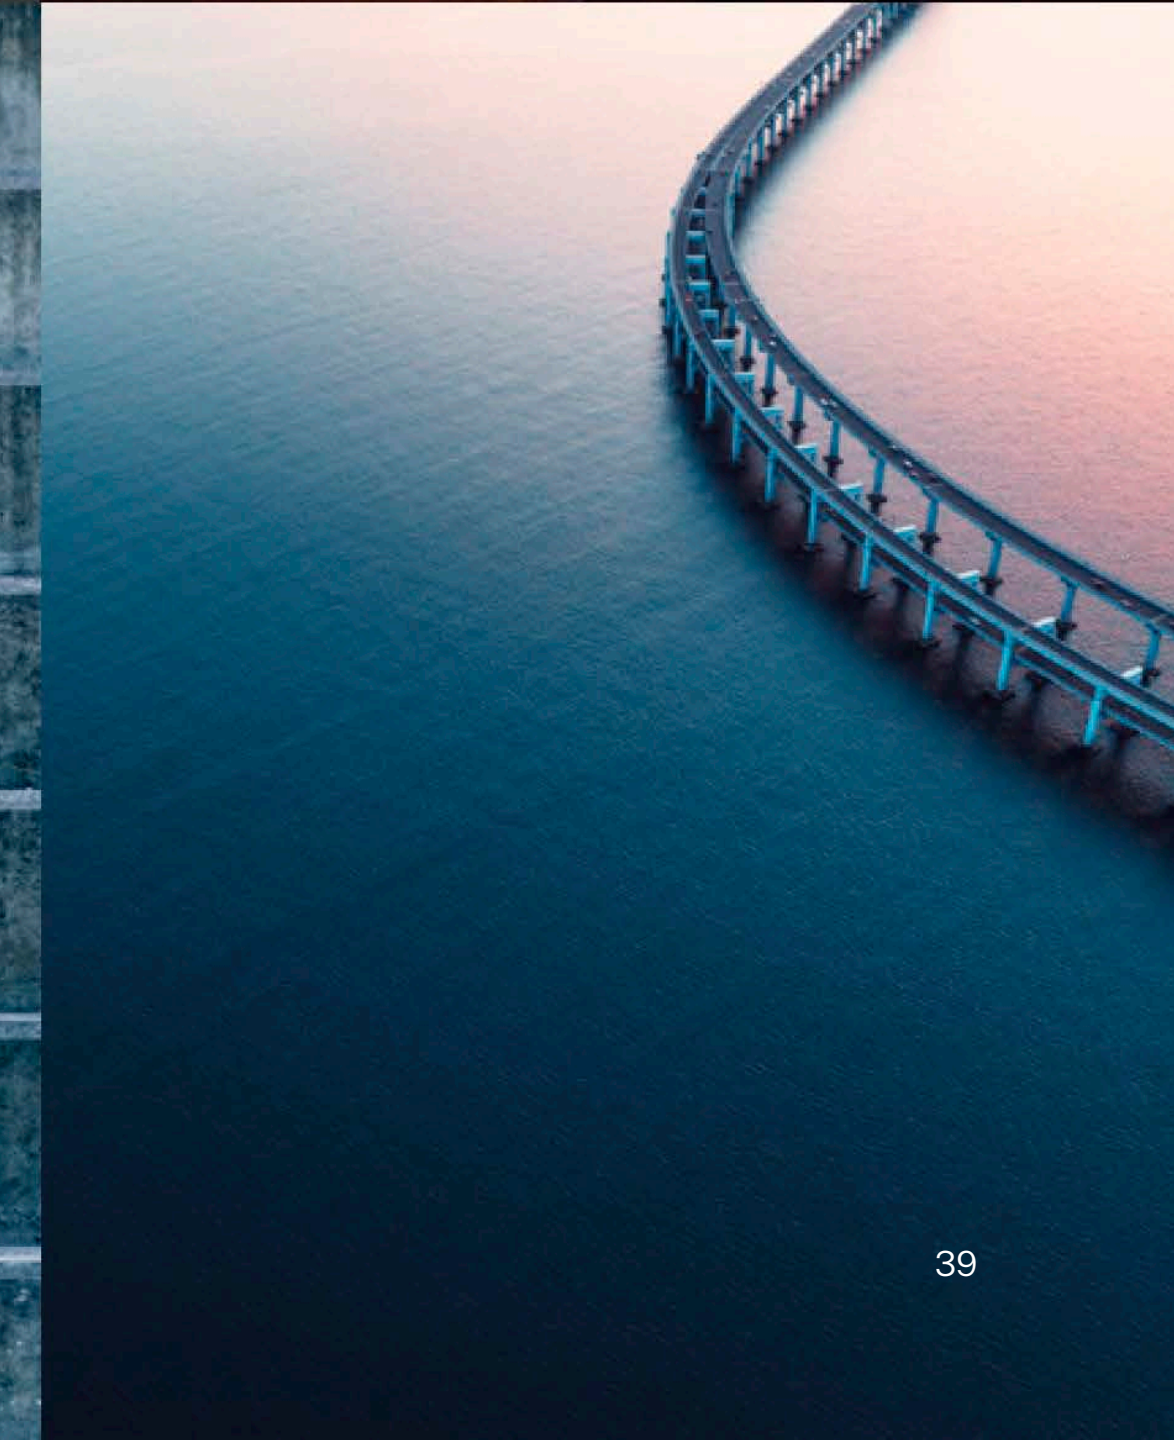

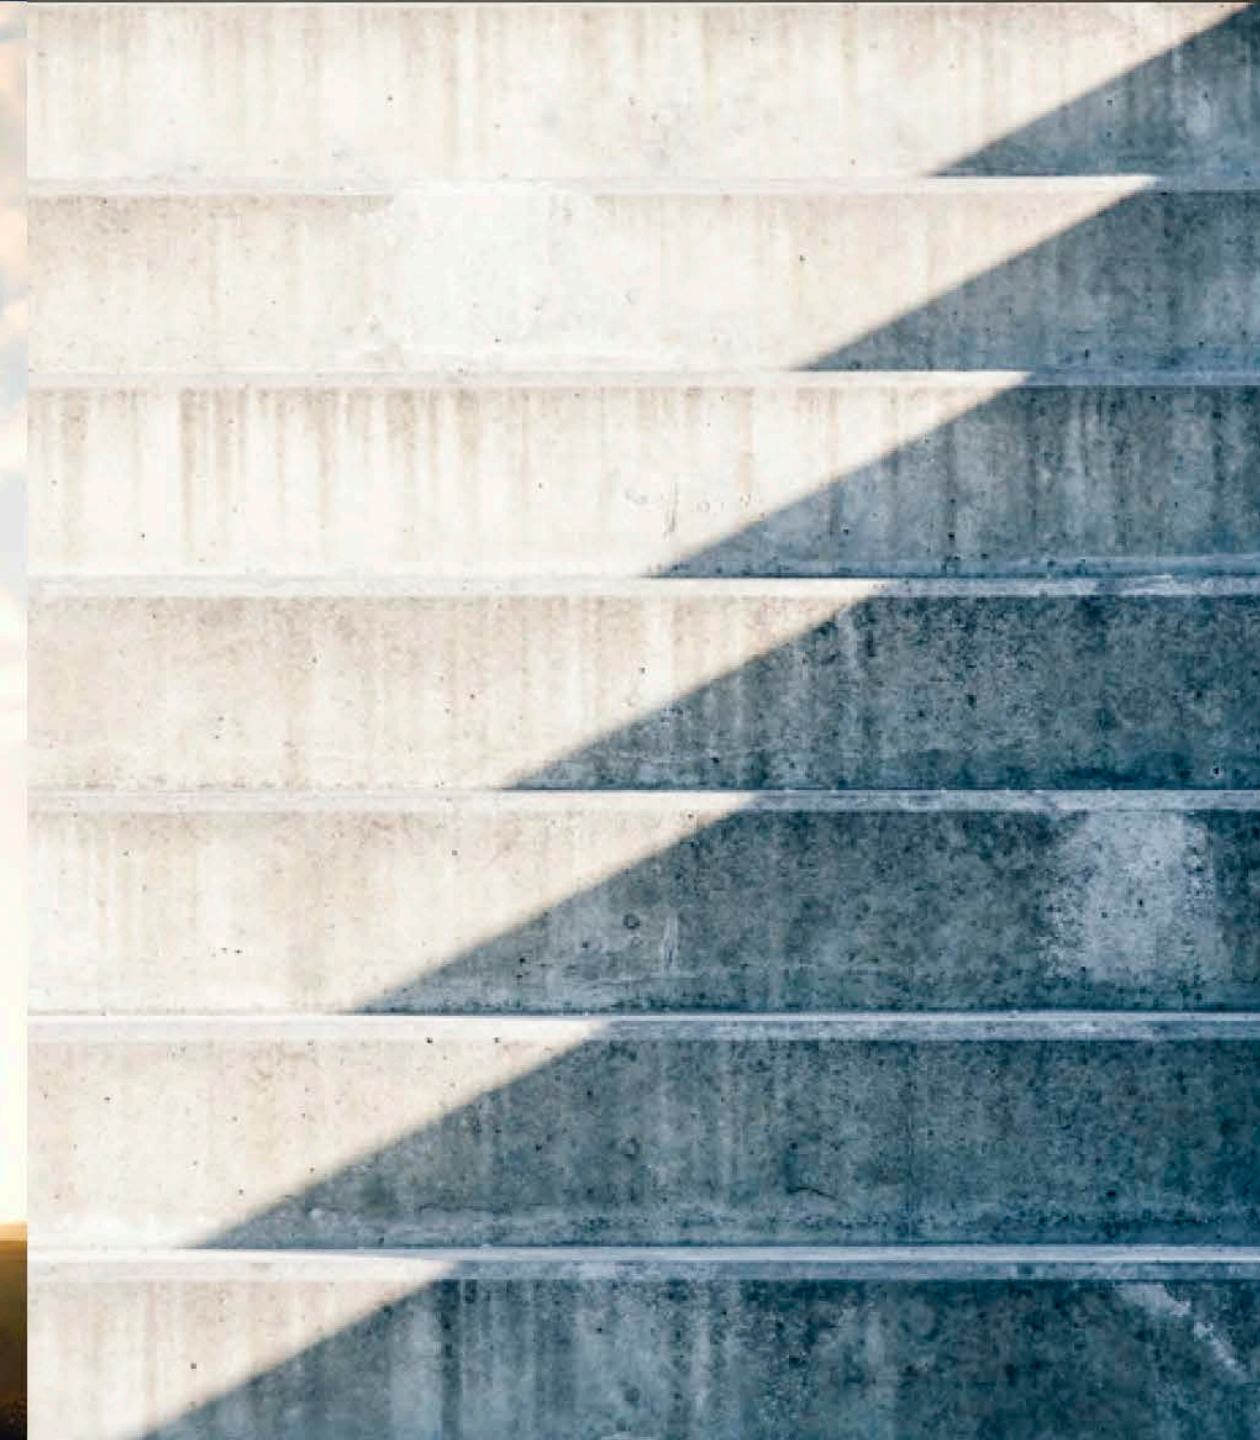

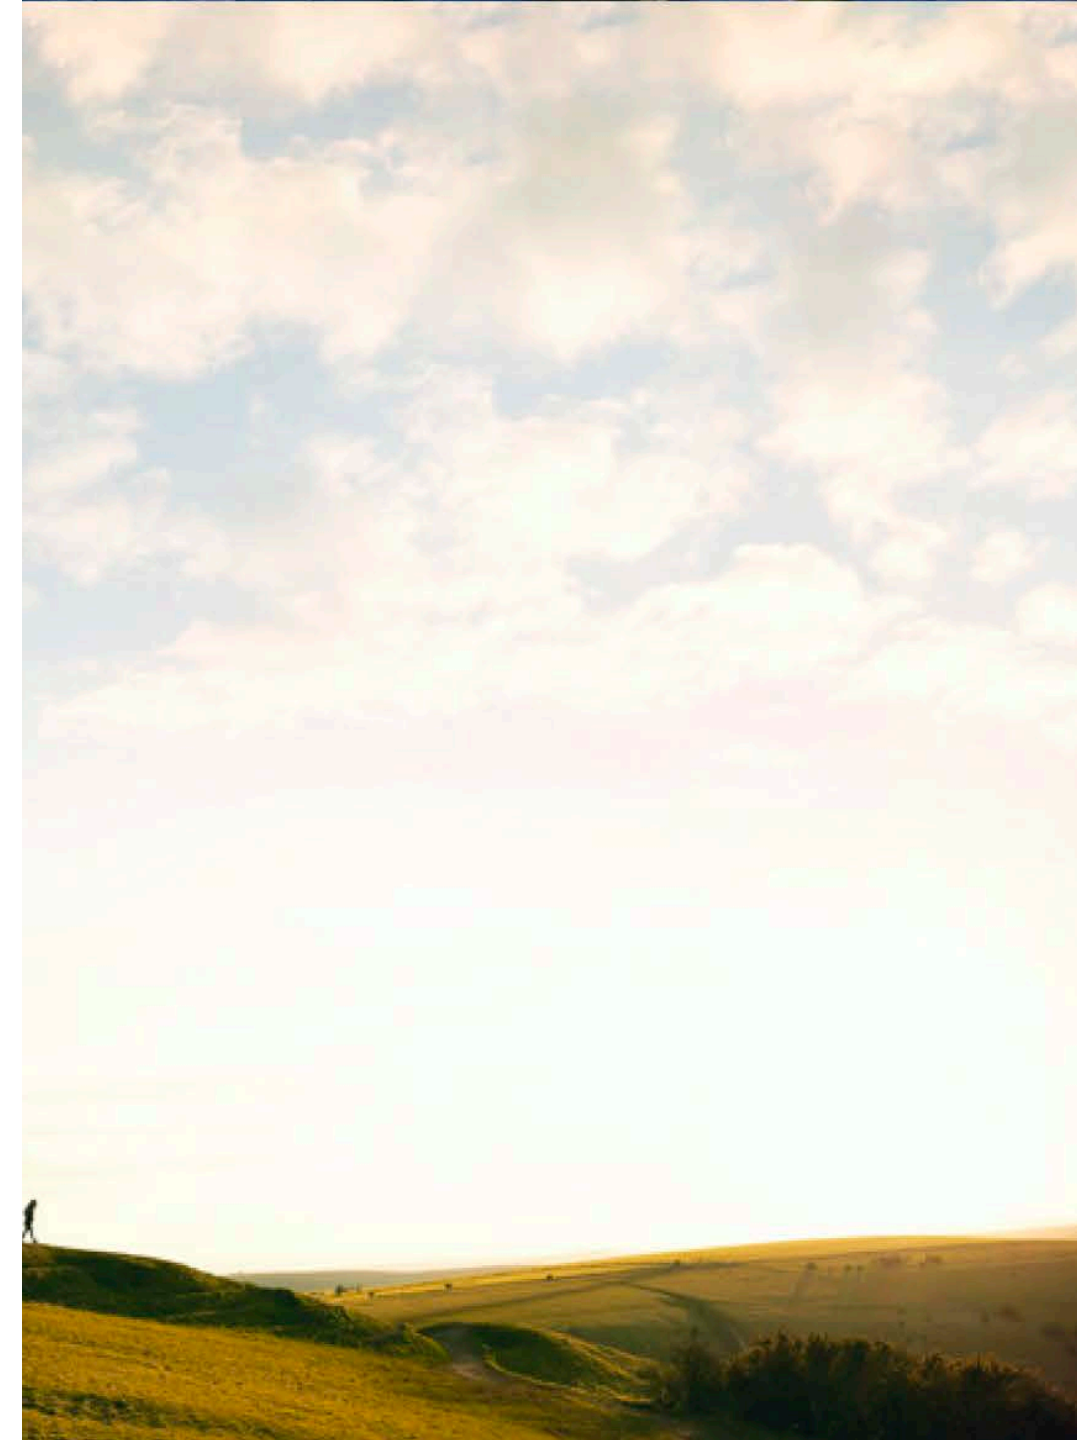

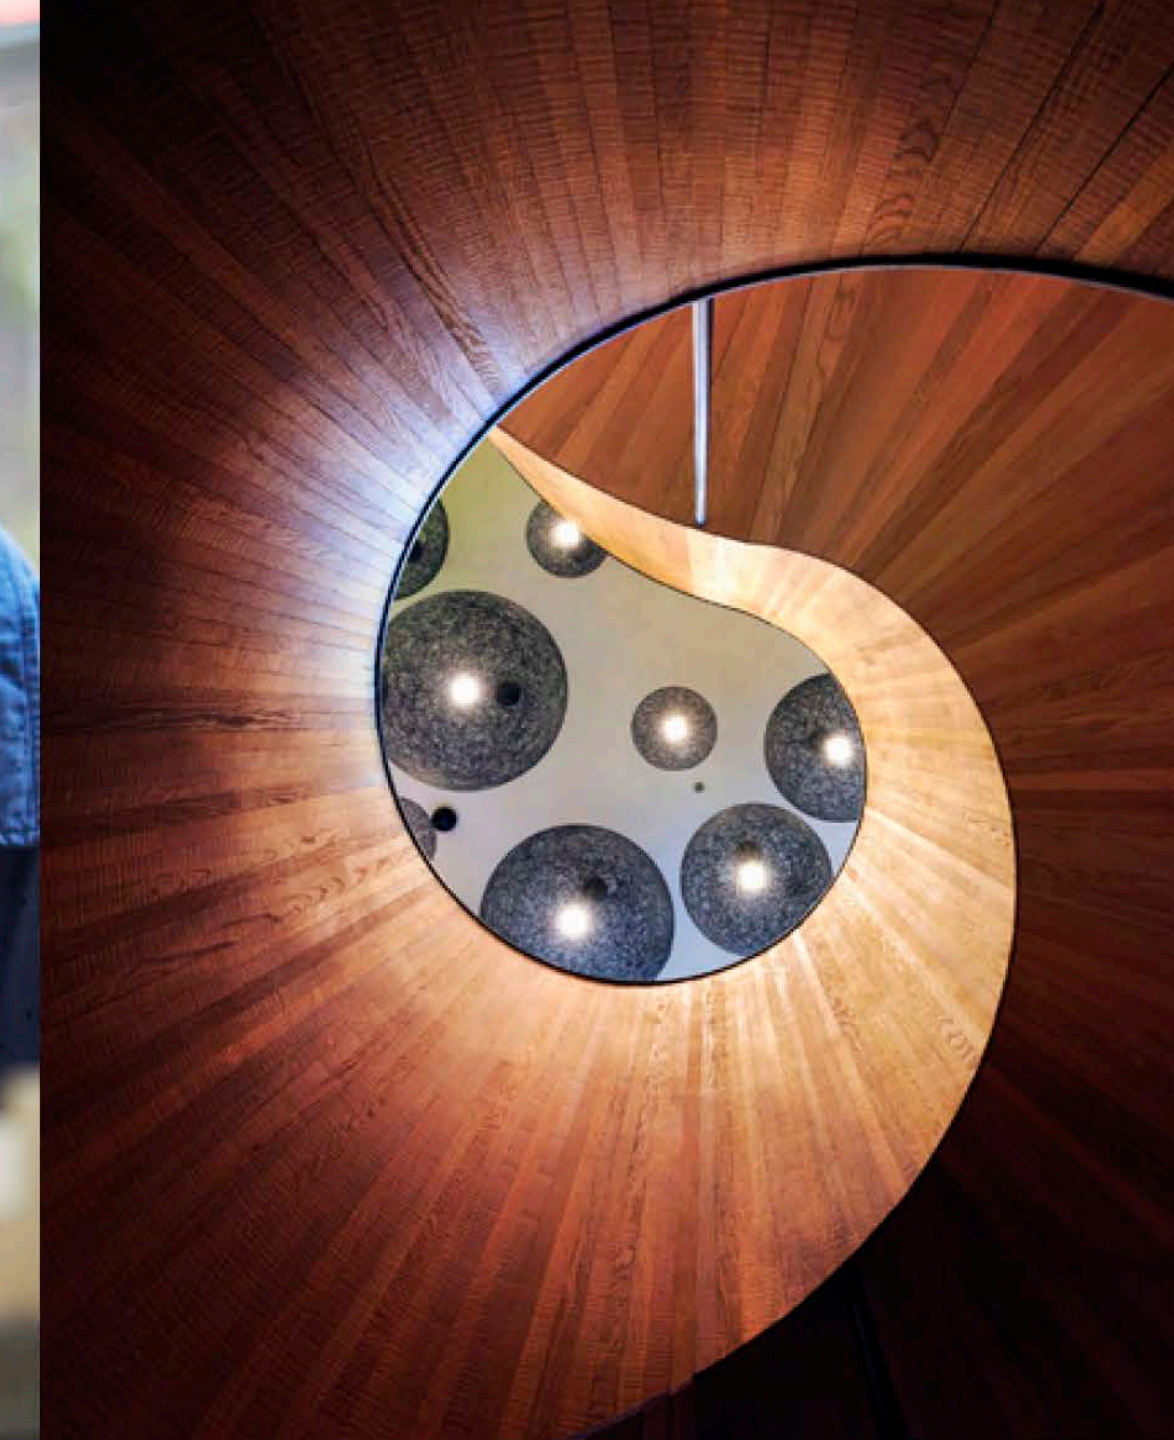

09.

PHOTOGRAPHY

Overview

Photography for Investment Management should align with the principles of our corporate brand images while also including more metaphorical images that speak to the business segment. Images can have a wide range of subjects, but they should also represent Investment Management concepts like momentum, looking ahead, navigating a landscape, growth, etc. These images should always represent positive concepts. It is important that even our metaphoric images maintain a polished and high-end aesthetic.

Read our full photography guidance on the brand center [here](#).

3D GRAPHICS

Overview

Like photography, 3D graphics can be used to speak to metaphorical themes.

Subject matter

Graphics should be simple and abstract. They should never depict real-world objects.

Color

These should be treated as backgrounds – use either teal tones or white, and avoid accent colors.

Read our full photography guidance on the brand center [here](#).

PHOTOGRAPHY

Brand Level EMEA

At a brand level the BNY Mellon Investment Management brand uses 3D images with its own recognisable primary colour multiplied over.

This combination of imagery and colour is used for BNY Mellon Investment Management general communication, when it's not related to any of the sub-brands owned by BNY Mellon Investment Management, ensuring a consistent yet dynamic brand expression.

PHOTOGRAPHY

Topic or thematic

A secondary level of photography is provided for all communications related to specific topics.

These images can be used on reports, articles and papers written or made in collaboration with BNY Mellon Investment Management sub-brands.

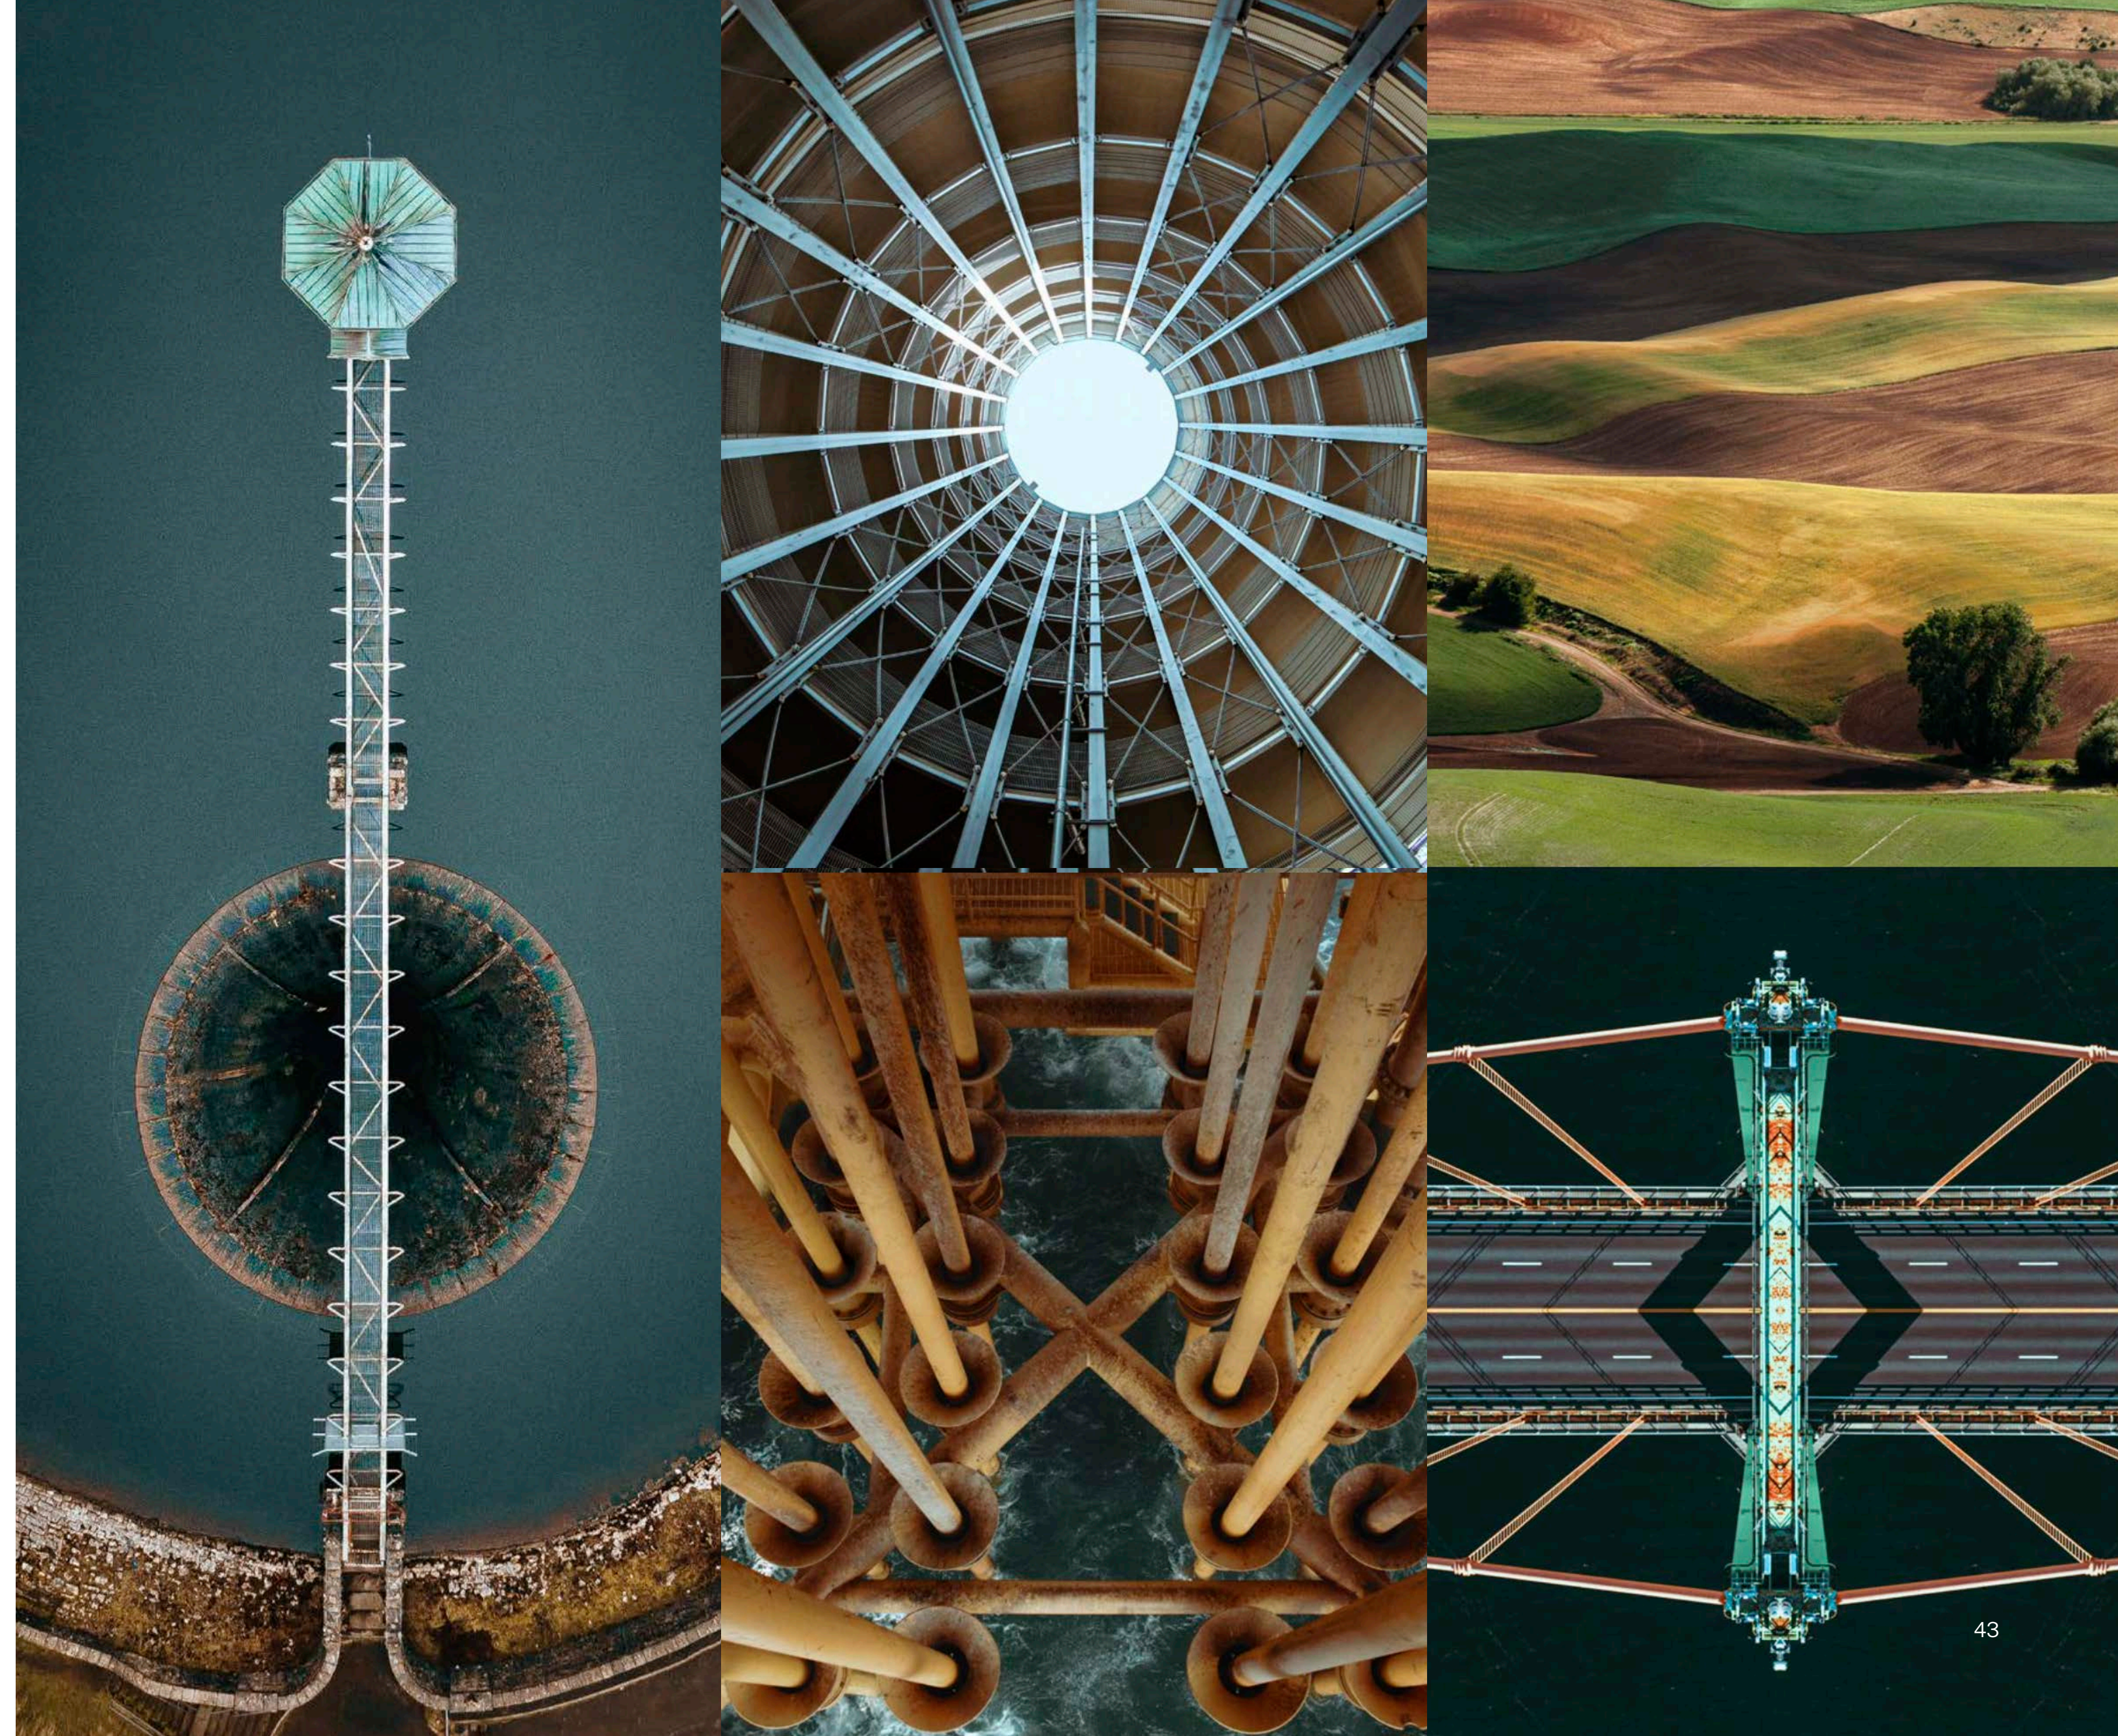

Imagery is abstract and colourful, and should relate to the topic discussed.

PHOTOGRAPHY

Subject matter

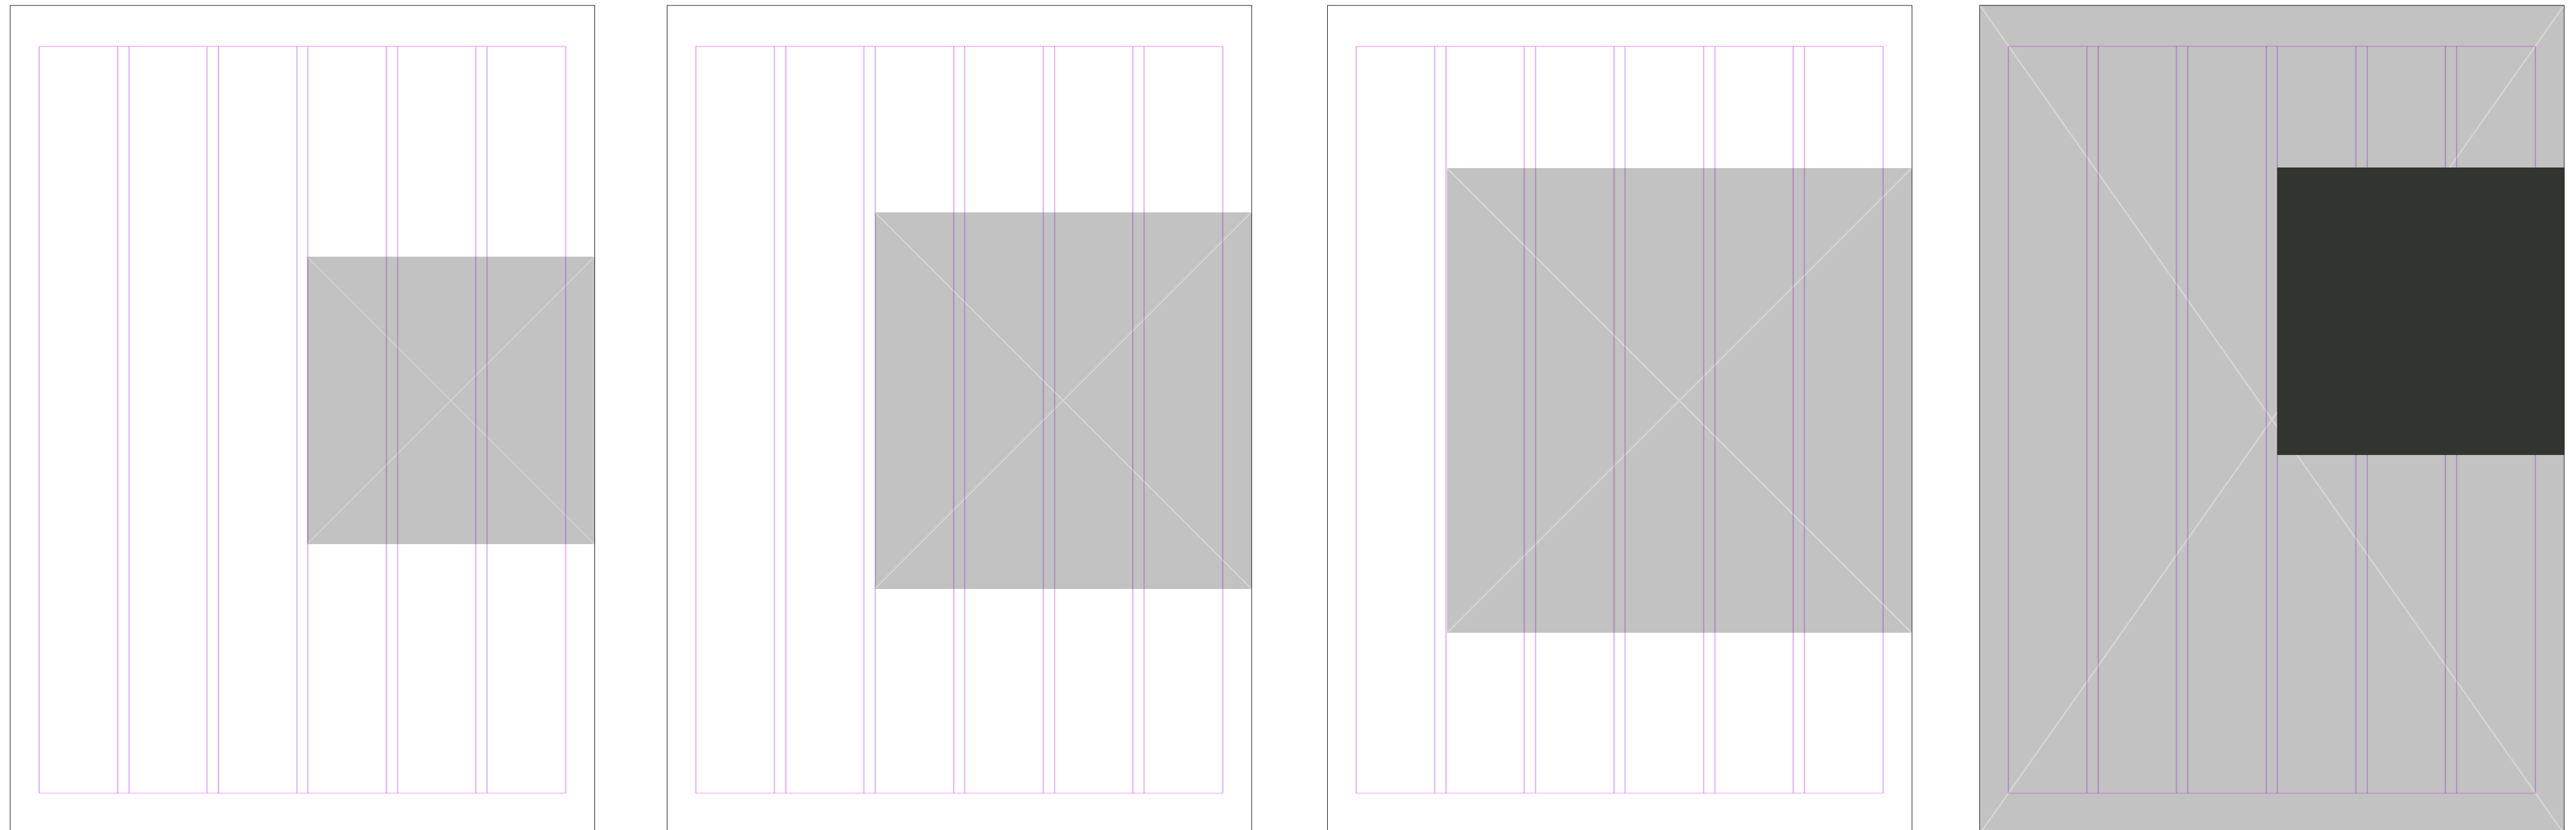

BNY Mellon Investment Management shares its perspectives through imagery related to various industries, global affairs and social issues. Underlying these perspectives is the core concept of balance, which we illustrate through symmetrical images that also convey a quality that is both effortless and modern.

PHOTOGRAPHY

Usage on covers - A4 as example

Examples of how imagery can be positioned on a cover using the 6 column grid.

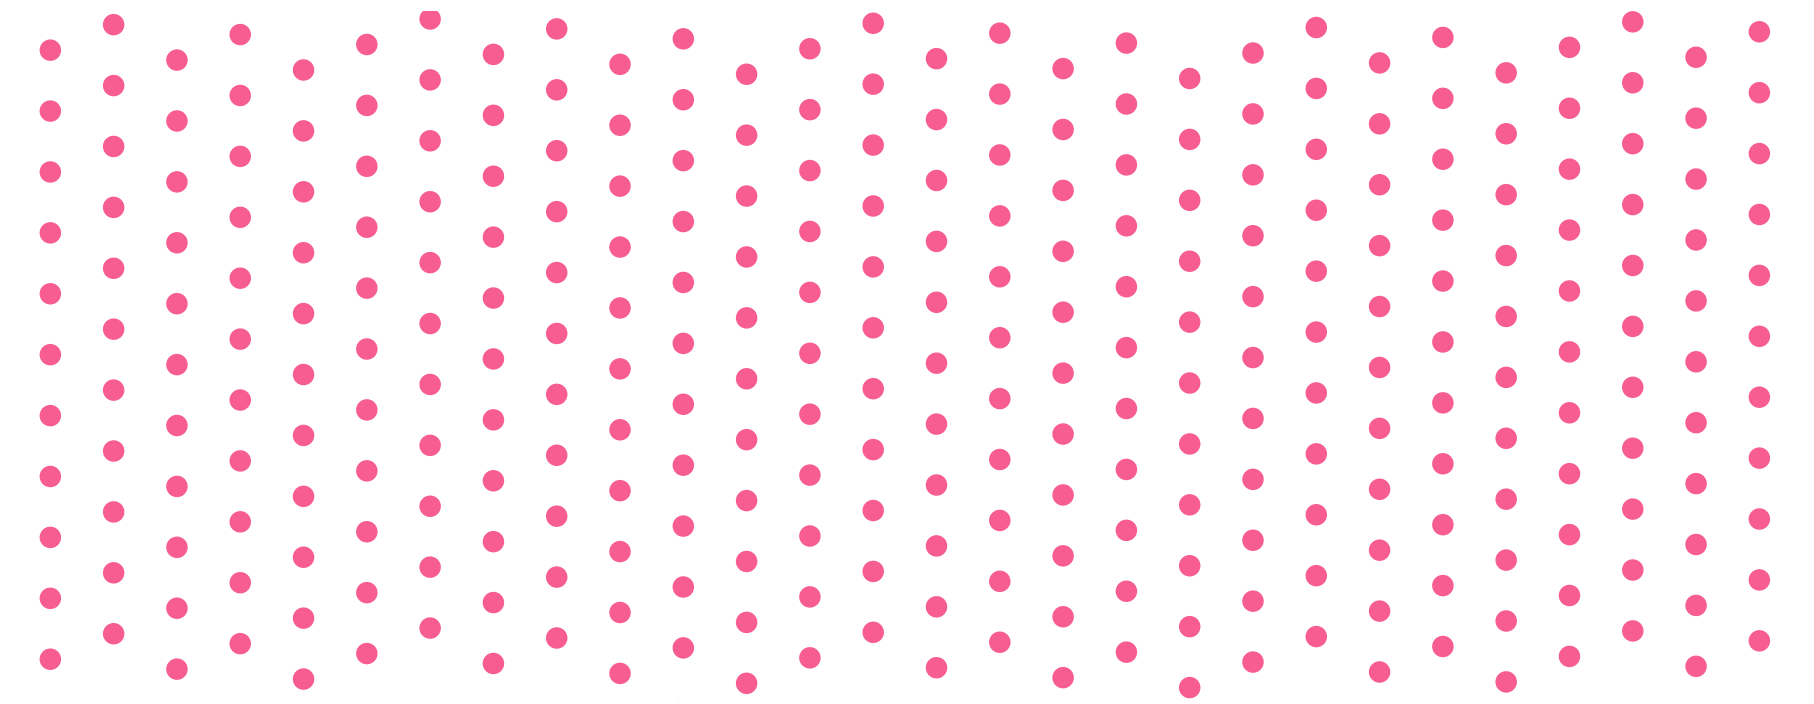

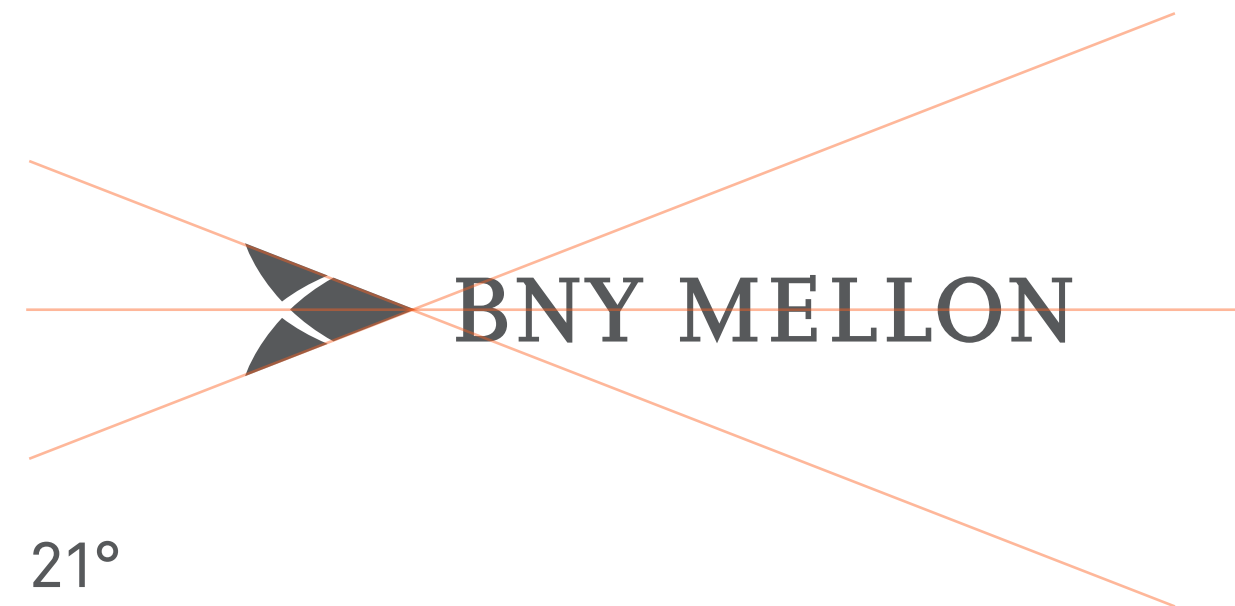

PATTERNS

Overview

The 21-degree angle in the BNY Mellon logo, which informed the brand vector system, now informs a suite of patterns, shown here, that add branded accents to design layouts.

These patterns are created using the Blend tool in Adobe Illustrator and can be manually adjusted in working files to change the color, weight, frequency and density of the pattern lines as needed.

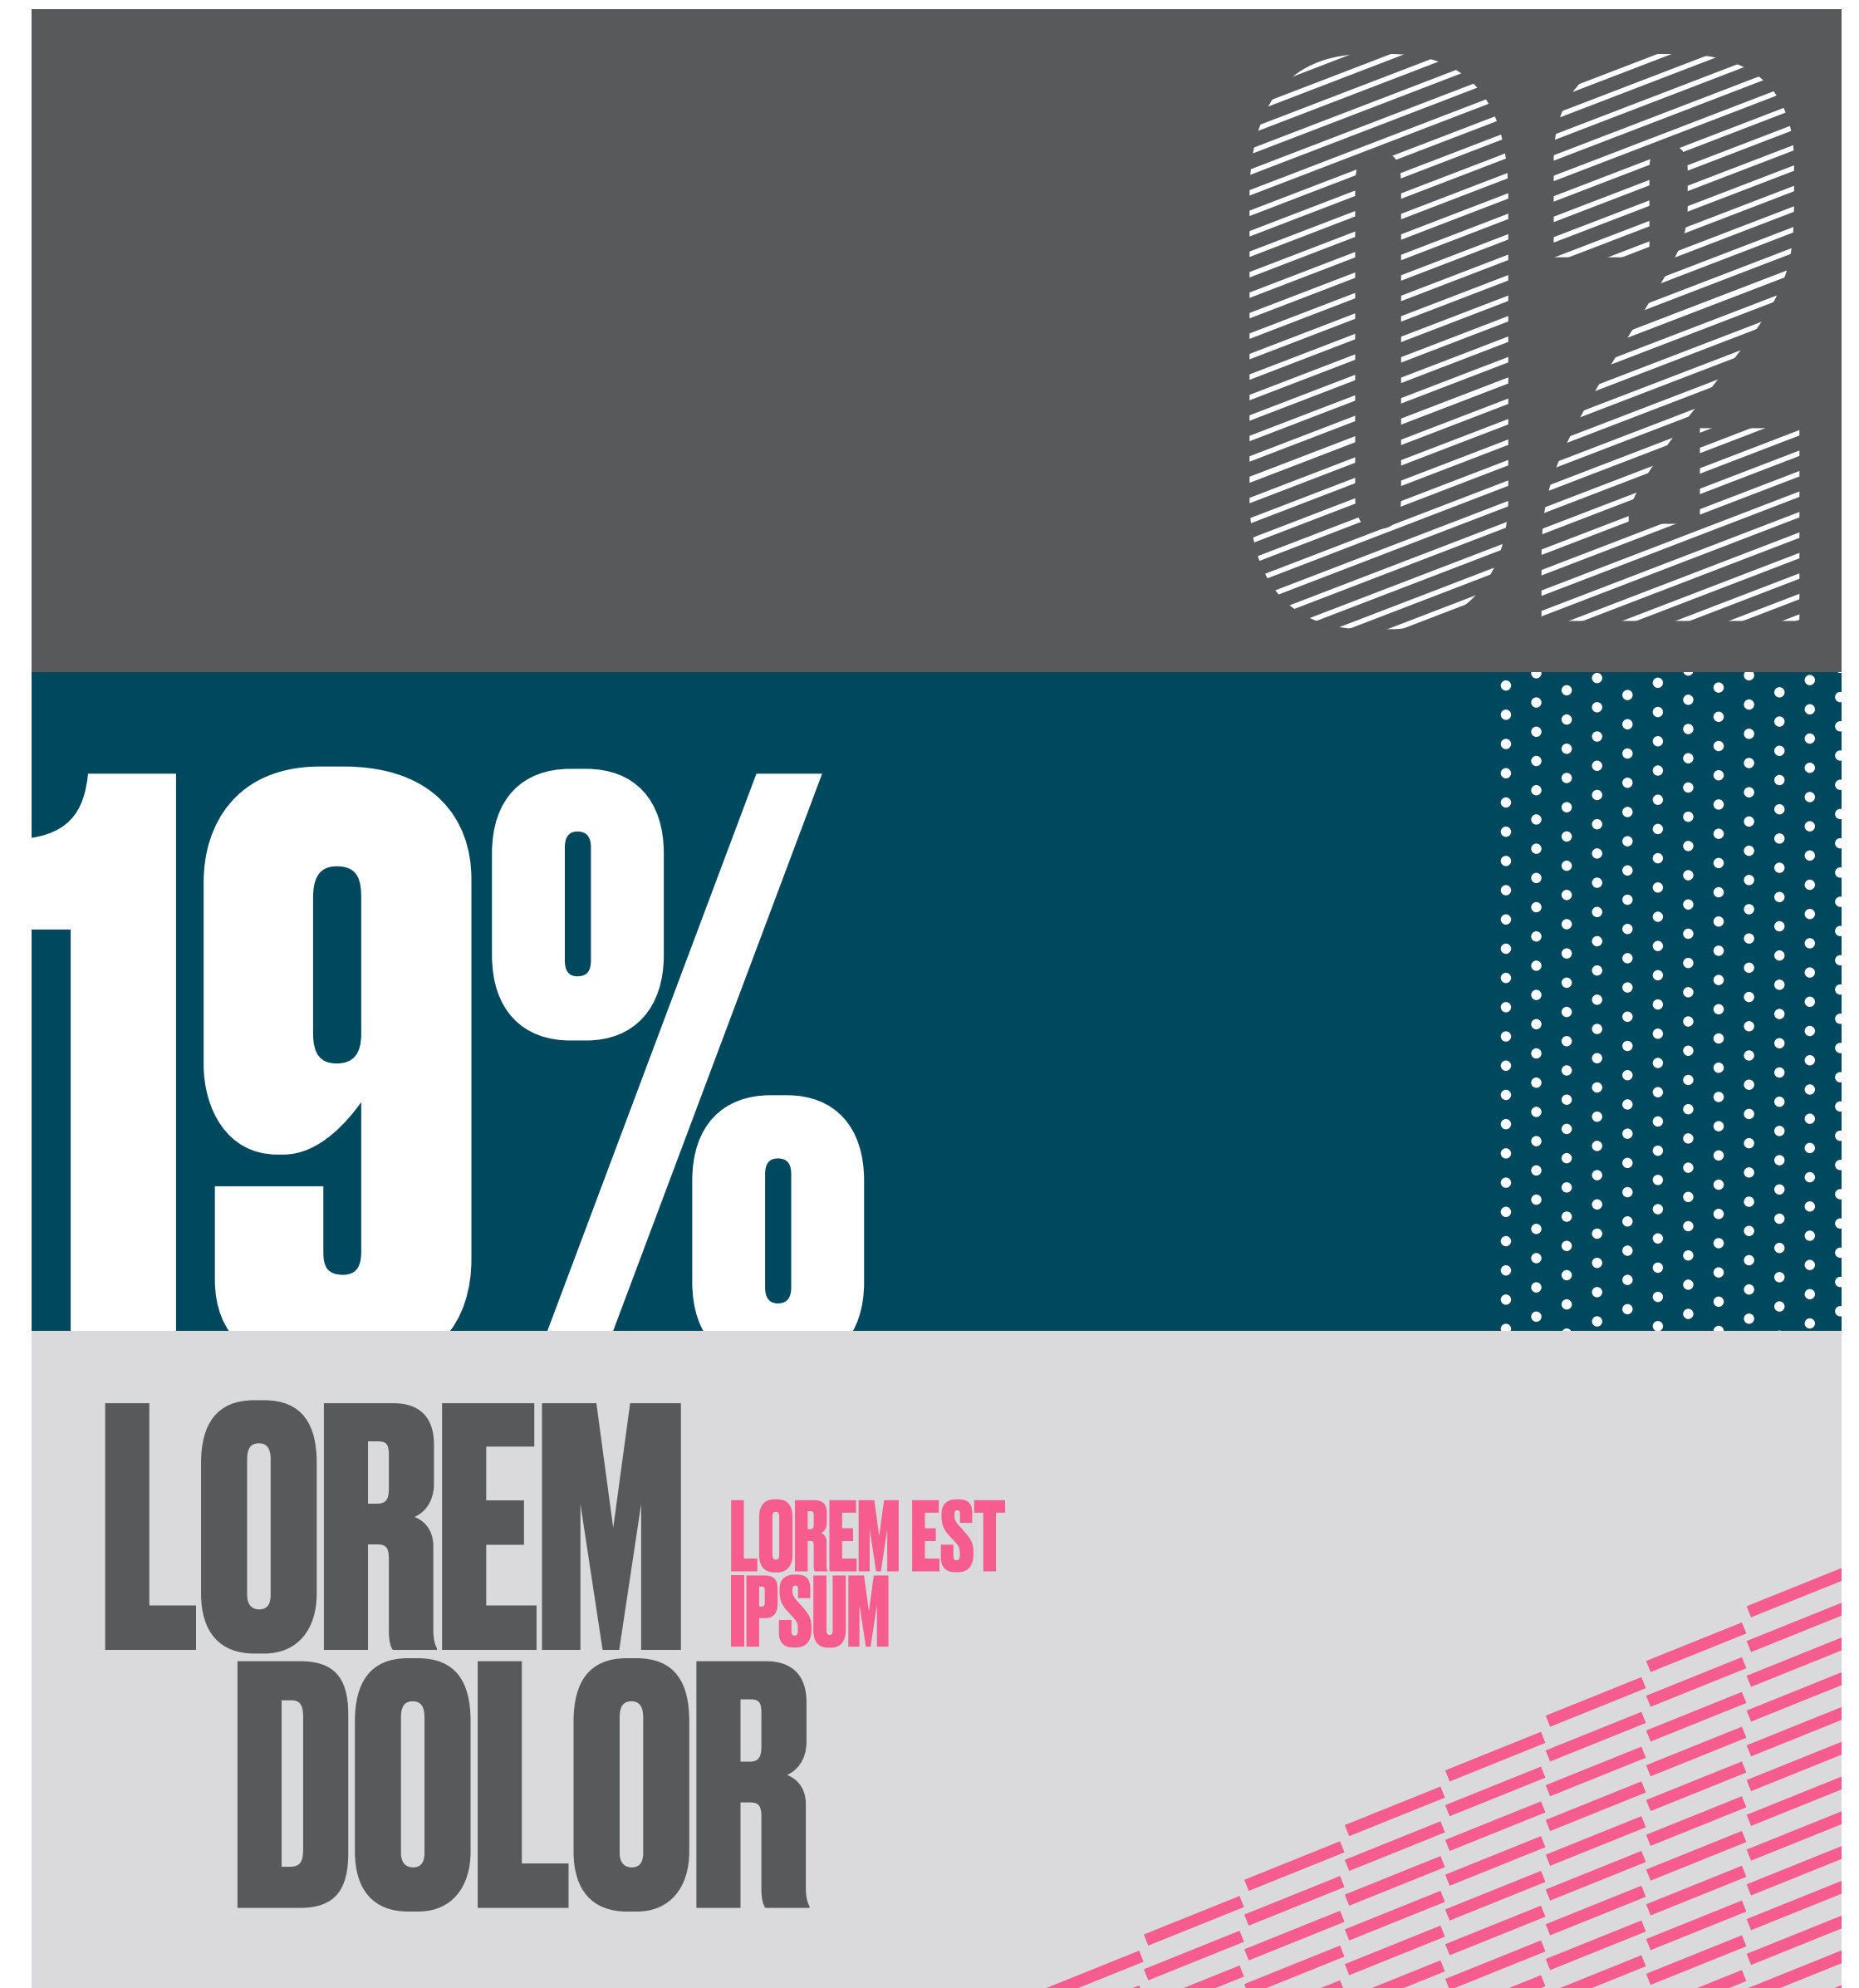

In addition to adjusting existing patterns, they can be used as a basis to create additional patterns. With new patterns, make sure elements are still aligned to the 21-degree angle and use appropriate color combinations.

PATTERNS

In use

Patterns should be used with discretion, and only as accents within design layouts, acting as a fill within simple text elements or the basic shapes of data visuals. In compositions without photography or 3D imagery, small areas of the pattern can be included as a graphic element but should not exceed 20% of the layout.

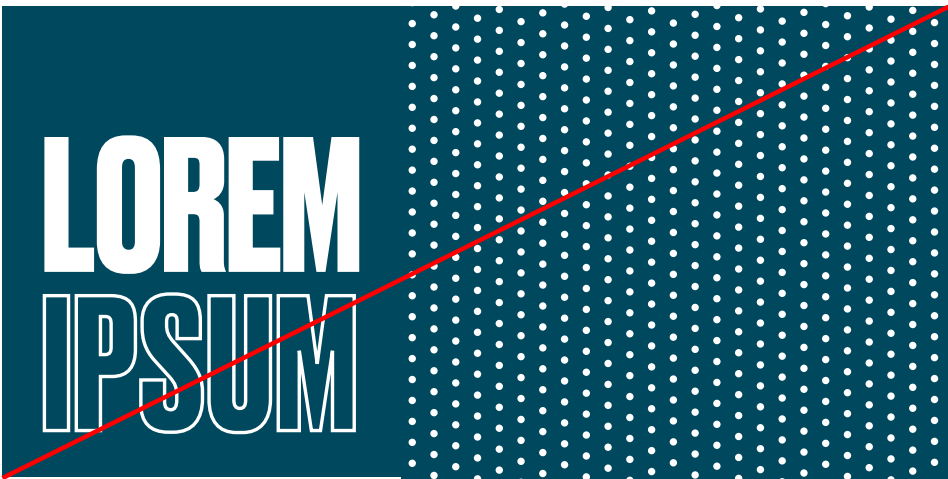

PATTERNS

Misuse

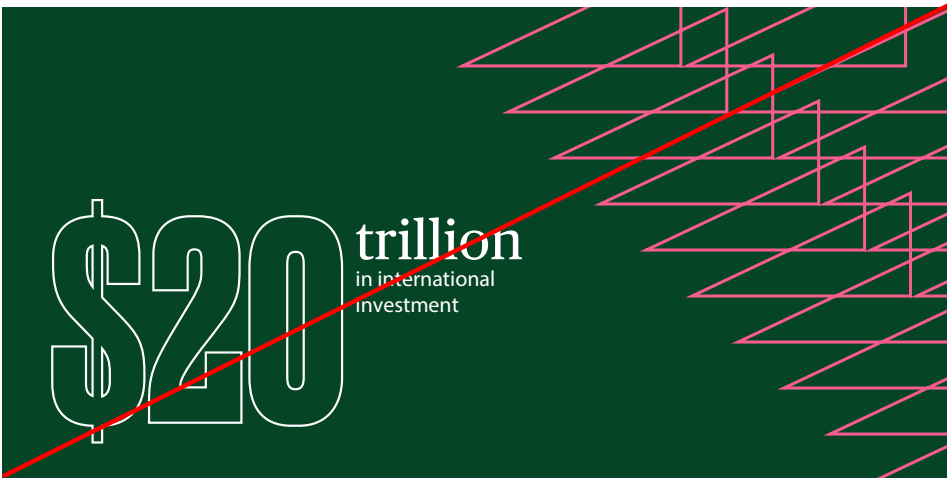

Do not use patterns over people in photography.

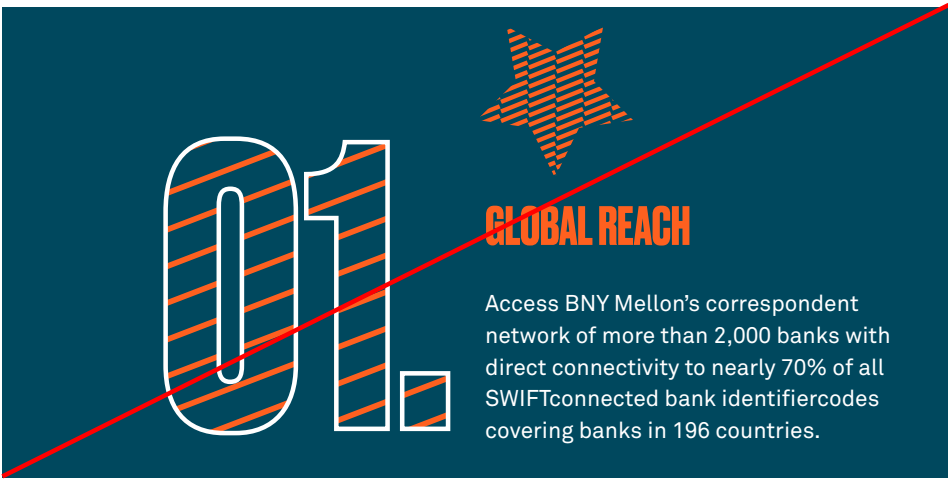

Do not use patterns for large portions of compositions.

Do not use patterns in unapproved color combinations.

Do not create patterns that create arrays of triangles or other shapes (nothing too reminiscent of the legacy vector graphics system).

Do not fill complex shapes or Druk Bold Outline with patterns.

Do not rotate or use any other angle for the lines of the patterns.

Nomenclature:
our products
and services

10.

NOMENCLATURE: OUR PRODUCTS AND SERVICES

Overview

When we take our products and services to market, we want to ensure that these are recognised by our clients. BNY Mellon offers both a mark of ownership and a mark of assurance. The best naming principles solve for a holistic approach to building brand equity that goes beyond the objectives of any individual naming challenge. These principles apply across the enterprise, enabling the development of names that are relevant and meaningful for our brand, our business and our clients. They also facilitate a clear and easy way for our clients to understand our offering.

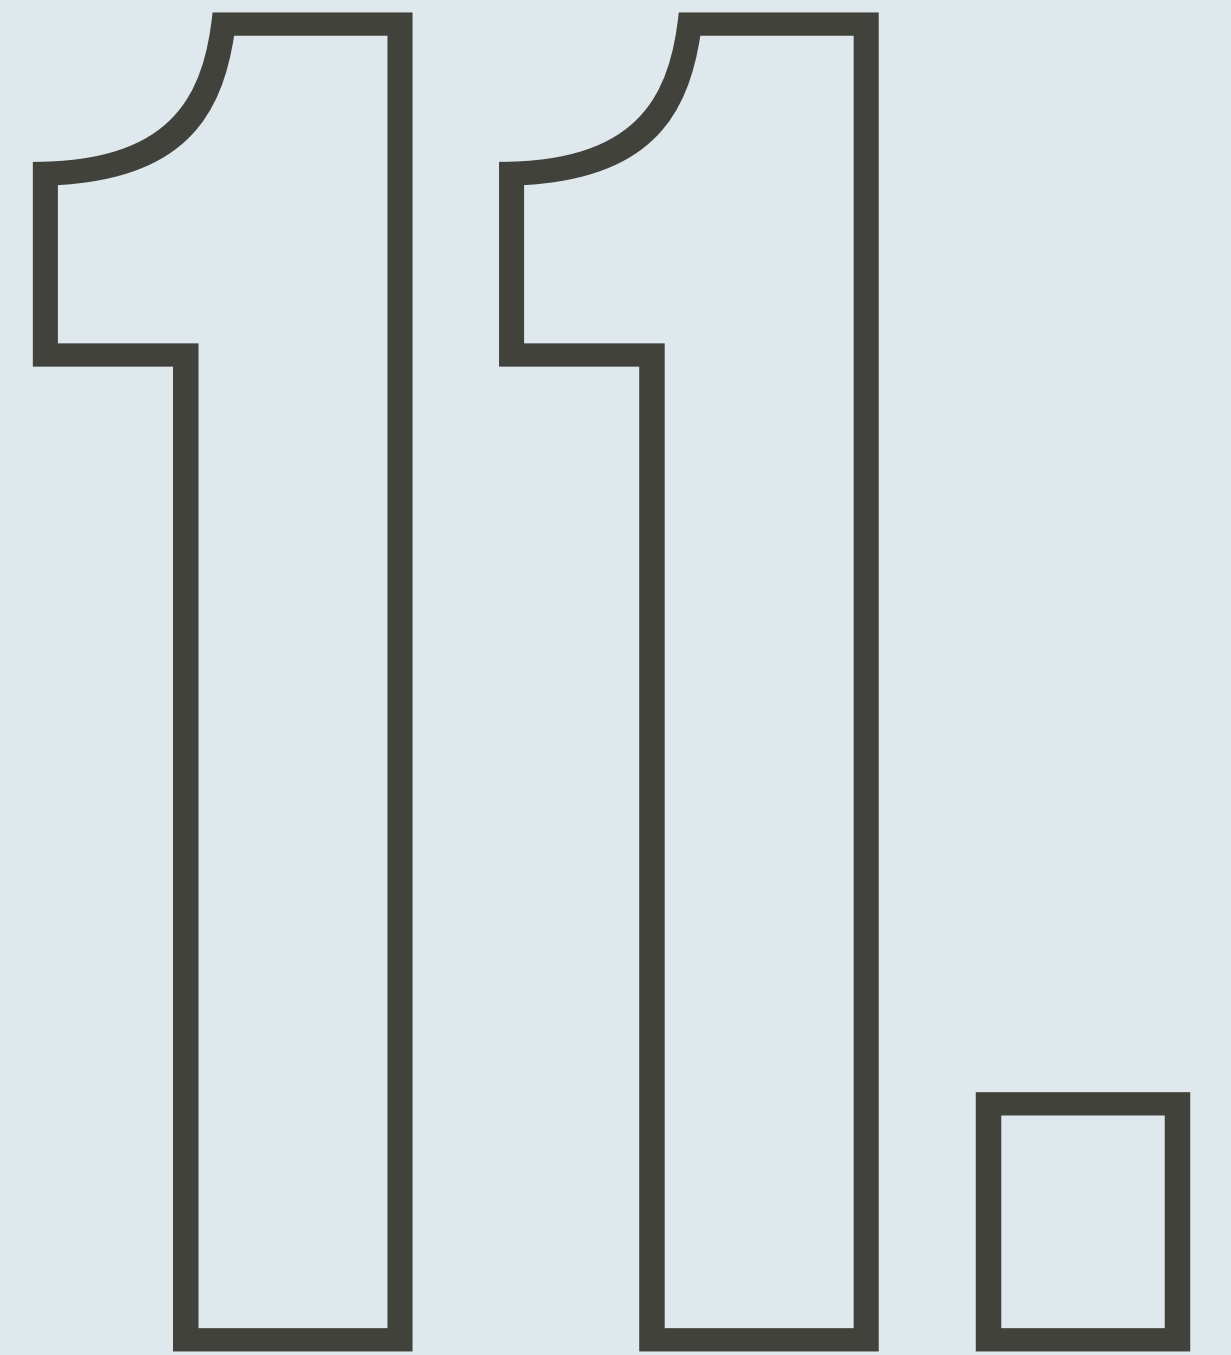

- Know which offerings you have capital to invest in for a long time. Those are the offerings where you have the most freedom to consider a new name.

- Keep the portfolio in mind. It’s natural for teams to want unique or exciting names, but you also want to maintain an orderly portfolio that clients can navigate.
- Make it easy for external audiences to understand. The most important thing is that a client can understand your offering.
- Name most things simply. If it’s not a first-to-market invention, consider using descriptive/ established category language that lets everyone know what it is, quickly and easily.
- Know when not to name. Ask yourself how you would market the offering if it didn’t have a name. Sometimes you can use messaging to convey additional capabilities within existing offerings.

A name will always exist in the context of the BNY Mellon brand and should use appropriate messaging, design, and client experience to tell the whole story.

COLOUR - APAC

Investment Management palette

Our dynamic palette distinguishes us from our competition with its modern tones. The new colour system is made of a primary colour ‘teal’ and a secondary colour ‘slate’ (new).

Building on the existing complementary pairing of the teal and orange, additional pairings of **accents** have been provided: yellow, light blue and pink. These new accents are used with the primary teal colour to give an expressive touch to the BNY Mellon Investment Management brand.

Colours are to be utilised in **combinations** as shown on this page. Accents are only to be applied in the prescribed colour pairings. There should never be more than one accent colour per composition.

Our background colour may be used for infographics or as an alternative cover colour (see from page 55).

MEET THE MANAGER

MEET THE MANAGER

Newton Investment Management senior portfolio manager
Julianne McHugh reflects on the varied role of asset managers
and industry efforts to attract more female investors.

Julianne McHugh
SENIOR PORTFOLIO MANAGER,
NEWTON

- Julianne McHugh is Newton's senior portfolio manager for various equity mandates including the BNY Mellon Large Cap Securities Strategy.
- She also oversees investment processes for products with financial and sustainable objectives.
- Julianne joined Newton in September 2021, following the integration of Mellon Investments Corporation's equity and multi-asset capabilities into the Newton Investment Management Group and has 30+ years' experience in capital markets.

What is your current role and how did this develop?

In addition to serving as head of sustainable equities, I am a senior equity portfolio manager at Newton Investment Management. Throughout my 18+ year tenure within the wider Bank of New York Mellon Investment Management (BNYM IM) division I have managed a variety of regional mandates ranging from value to growth – fundamentally driven and quantamentally-driven. Currently I focus more on US equities and manage both core and sustainable strategies.

How did you first get involved in the investment business?

During my junior year of college I spent a semester studying in London and the program involved an internship. I requested a role in corporate finance but there were not enough roles available to fill the demand. Instead, I was placed in a small, start-up brokerage firm that specialized in the Asian market. I loved it. I decided right then that I wanted to pursue a career in investment management.

How has your career in investment management evolved?

At the start of my career, I expected to become a career analyst specializing in a given sector. Instead, I ended up rotating from one sector to another every few years while working as a fundamental research analyst. I have spent time covering both growth and typical value sectors, US stocks, emerging markets and developed ex-US markets. This breadth of investment experience has allowed me to become a diversified portfolio manager. At the Bank of New York, I have managed a range of strategies, including US strategies, emerging market and global strategies.

How would you characterize your style as a portfolio manager?

My style is that of a fundamental stock picker. I focus on long-term and secular growth opportunities rather than short-term trading opportunities.

What do you like most about working in asset management and what are the key lessons you have learned from working in the investment industry?

For me, the best thing about asset management is that every day is different. To fully assess an investment opportunity one must understand accounting, strategy, economics, finance, marketing, technology, human capital and then take all these factors into consideration.

However, I have also learned that process matters. It is important to build a process that relies on identifying opportunities with competitive advantages consistent with your stated objective. But no one can be right all the time therefore success requires an openness to seeking different perspectives from other investment colleagues, which can help achieve fully rounded investment decisions.

A recent BNY Mellon Investment Management survey¹ found that if women invested at the same rate as men there could be more than US\$3.22 trillion of additional capital to invest globally. How can investment managers help encourage more women to invest?

The first step is to develop and offer investment products and vehicles that appeal to women. BNYM IM research shows the importance that women place on investing in companies and causes that they believe in. Interestingly, some research suggests women are more conservative when it comes to risk and are less likely to jump on the 'hot dots' and react impulsively to market volatility. Other studies suggest women tend to generate stronger returns than men over time. As a firm, I believe we offer products that can appeal to a female audience. That said, I fear the industry as a whole was originally built to cater to male investors and could do a better job recognizing the sheer value that could be generated by incorporating a focus on women and addressing the largely untapped market opportunity female investors present.

Are there any investment lessons we can learn from the Covid-19 pandemic?

That period helped create opportunities in telemedicine while spurring the development of communications products and systems, enabling remote access and more flexible working. This may bring longer-term benefits to some within the workforce – particularly those women who need to leave work or accommodate family needs. The ability to work from home without fear of jeopardizing one's career has the potential to be genuinely empowering for many women.

COULD AI BRING
A NEW EPOCH
OF TECH

How artificial intelligence
could reshape business and
drive new investment
opportunity.

COULD AI BRING A NEW EPOCH OF TECH?

2

New developments in artificial intelligence (AI) could herald a ‘third epoch’ of technological development, transforming lives and creating myriad new investment opportunities, according to Siuchoon Koay, research analyst in the Newton Investment Management equity research team.

IAI has been making headline news in 2023, following the development and launch of generative AI chatbots¹ that can conduct a human-like conversation with users, generate software code, emails, draft business proposals and even write essays.

Opinions on AI's latest phase range from excited approval from the many companies which see rich potential in its application to those who downplay its use as a new gimmick or worry about its unintended consequences and potential future impacts on humankind.²

In March 2023, an open letter from the Boston-based Future of Life Institute, backed by over 1,000 artificial intelligence experts, researchers and backers, called for a pause in broader AI experiments pending more research into their potential dangers.

Yet for all this, many firms see far more benign prospects for this emerging new technology, with some believing it could revolutionise many business sectors, creating a wave of efficiency gains, cost savings, new products and revenue opportunity.

Transformative change

At Newton Investment Management, Siuchoon Koay, research analyst in its equity research team, believes AI could be more transformative than the development of the internet, opening new frontiers of opportunity.

"With artificial intelligence we have now arrived at what can be seen as the 'third epoch of technology'. The first was the development of the internet; the second smartphones. AI will throw us new surprises, transforming our lives in ways we cannot imagine, yet exactly how is highly uncertain because

predicting AI is like predicting growth of the internet in 1999 or of smartphones in 2007".

With hardware progress and the ability to train AI models within reasonably short time frames, Koay believes AI is "ready for prime-time" in applications ranging from large language models to predictive modelling, pattern recognition, perception processing and even creative content creation.

AI applications

"While it is uncertain, there are lots of probable developments and applications for AI. The initial end use could be more consumer-oriented, focusing on generative AI that creates new content. We think we'll also see the development of new natural language processing tools such as chatbots that interact in a human-like way."

"Perception processing could also be set to help bots and droids take on repetitive, dangerous, or mundane jobs, while new AI tools in the creative industries could lead to the development of novel art forms. So-called hyper-personalisation³ is also likely to see the development of new AI pets or companions for humans."

Pattern recognition and predictive models also could accelerate scientific discovery in areas such as weather forecasting, crime, and health diagnostics. Sustained interest and investment in AI could drive a new wave of growth in coming years.

According to Koay: "AI could contribute hundreds of billions in increased productivity and new consumption to the global economy. This technology will impact all sectors – itself the cause and target of disruption. We believe it will present a myriad of investment opportunities in the years ahead."

The market is already growing fast. Generative AI investments increased more than threefold between 2020 and 2022, while the median pre-money valuation for venture capital -backed generative AI companies rose from about US\$40M in 2022 to US\$90M in Q1 2023.*

OPPORTUNITIES
IN FIXED INCOME

March 2023

This report was written by Insight Investment. As such, it is in its voice as opposed to that of BNY Mellon Investment Management.

BNY MELLON
INVESTMENT MANAGEMENT

Insight
INVESTMENT

Investment Managers are appointed by BNY Mellon Investment Management EMEA Limited (BNYMIM EMEA), BNY Mellon Fund Managers Limited (BNYMFML), BNY Mellon Fund Management (Luxembourg) S.A. (BNY MFML) or affiliated fund operating companies to undertake portfolio management activities in relation to contracts for products and services entered into by clients with BNYMIM EMEA, BNY MFML or the BNY Mellon funds.

OPPORTUNITIES IN FIXED INCOME2

The rapidly changing market backdrop of the last fifteen months caused many investors to reassess the assumptions that undergirded portfolio construction for the preceding fifteen years. The gravitational effect of a swift and successive interest rate rises on bond valuations and reassertion of meaningful has proved difficult for investors after a long period of suppressed bond yields, ample liquidity and a supportive monetary policy.

However, ultimately, we think the coincident rise in bond yields reintroduces fixed income as a viable asset allocation for all investors and we think the opportunities outlined in this paper can allow investors to navigate the next phase of the market cycle.

While volatility is likely to remain a factor for all markets, we think active fixed income investors are now in a much stronger position than they were at the same point in 2022 and have a greater chance to capture the potential for higher returns and income as yields have risen.

Setting the scene

The experience of 2022 proved scarring for fixed income investors. In fact, on a total return basis, the Bloomberg Global Treasury index produced aggregate returns of -17.5% for 2022, vastly exceeding the losses accrued in other annual periods over the last thirty years. This was a stunning fall in value for assets traditionally viewed as risk free.

FIGURE 1: 2022 – A BAD YEAR FOR BOND INVESTORS²

Year	Return (%)
1990	12
1991	15
1992	4
1993	12
1994	1
1995	20
1996	5
1997	1
1998	15
1999	-5
2000	-2
2001	-1
2002	19
2003	14

2017	-1
2018	5
2019	9
2020	-7
2021	-18
2022	-17.5

However, despite the discomfort of mark-to-market losses, central bank tightening and elevated volatility, the fact remains that yields on many fixed income assets appear more attractive than at any point during the preceding 15 years. In addition, in our view, fixed income markets broadly are much less sensitive to interest rate rises than previously, as yields have risen.

1,2 Source: Bloomberg Global Treasury Index, data as at 31 December 2022.

OPPORTUNITIES IN FIXED INCOME3

We begin with an assessment of rates markets, including an outlook on interest rates, and suggest how investors might consider adjusting their exposures to benefit from the market backdrop. We then explore the opportunities available to investors as credit spreads have widened. Finally, we end by suggesting three allocations investors can make that we believe can enhance overall portfolio resilience.

Rates markets

PLATEAUING INTEREST RATES AND DURABLE INFLATION

Using yield curve steepeners to navigate the approaching plateau in interest rates

Market pricing suggests central banks will, after some additional interest rate hikes, pivot policy quickly and begin cutting interest rates over the near term. In our view, prevailing conditions mean interest rates are most likely to plateau; inflation has not fallen as quickly as market expectations, economic growth remains positive and central banks appear hesitant to repeat the mistakes of the 1970s by cutting too quickly.

In such an environment, we believe the inversion of the US yield curve between 2-years and 10-years favours positioning for a steeper yield curve in future.

often challenging for bond investors. However, should inflation endure for longer than market expectations, we believe inflation-linked bonds are the best way to obtain protection.

In some inflation-linked bond markets, yields have risen back to reasonably protective levels. In the US, Treasury Inflation-Protected Securities (TIPs)³ are now reflecting real yields of around 1.5%, providing a potentially attractive inflation-adjusted return over the longer term. However, given durable inflation represents the most likely catalyst for nominal yields to move higher, an investment in TIPs could insulate investors from a future rise in nominal yields. Elsewhere, with real yields remaining anchored between zero and half a percent, we think equivalent instruments in the UK and Europe do not yet provide sufficient protection.

In addition, investors can employ other strategies to trade inflation risks. For example, inflation swaps may provide an avenue to access the relative value that exists between inflation markets by trading the different breakeven rates⁴ on offer. Given the difference in central bank targets in the US and the eurozone, we think a potential long-term inflation differential exists between the markets, with the US potentially having an inflation rate 40 basis points per annum higher than the eurozone over the longer term.

At present, market pricing seems to reflect higher inflation in the eurozone relative to the US over the longer term. Given the spike in energy prices last year we think a case for higher eurozone inflation over a shorter time is plausible. However, over the longer term, we believe energy prices will normalise and eurozone inflation will average less than US inflation. Therefore, to us, paying eurozone inflation and receiving US inflation via swaps is preferable.

TAKE ADVANTAGE OF GLOBAL DISLOCATIONS WHERE POSSIBLE

Japan is currently an example of such a strategy. The distortive effect of the Bank of Japan's (BoJ) policies over the greater part of the last two decades has left Japanese government bond (JGB) yields suppressed, offering investors little benefit apart from diversification. Currently, JGBs offer nominal yields of below 50 basis points at maturities of 10 years and below, far beneath those on offer in other government bonds markets.

In addition, at its latest policy meeting the BoJ left rates unchanged at -0.10% and yield curve control intact, continuing with a policy mix seemingly at odds with other developed markets. Likewise, the Japanese experience of inflation during 2022 and 2023 has proven much more benign than conditions in Europe and the US. Indeed, despite the combination of a devalued yen and significant energy price rises, Japanese inflation has just reached 4%, which we think will prove transitory, giving little incentive for interest rate hikes. As a result, a jump in JGB yields seems unlikely at first sight.

Choosing the appropriate instrument is crucial when adopting such a strategy. Currently, swap curves in the UK, US and Europe are exhibiting much more pronounced inversion than government curves, creating an opportunity for bond investors to implement this position utilising swap curves in all three markets.

DURABLE INFLATION – US TIPS AND US RATES SWAPS ARE NOW MORE ATTRACTIVE

The experience of inflation during the preceding two years provides a stark reminder that inflationary environments are

3 Treasury Inflation Protected Securities are a form of government debt issued by the US government that is indexed to inflation to protect investors from a decline in the bond's purchasing power.

4 Breakeven inflation rates reflect the difference between the yield on a nominal fixed rate investment and the real yield of an inflation-linked security of a similar maturity and credit quality. Inflation linked bonds will outperform an equivalent nominal bond if inflation averages more than the break even rate.

REASONS WHY:

BNY Mellon

FUTURELEGACY RANGE

Why Multi-Asset?

Multi-asset funds are a well-established, convenient way for investors to save for and during retirement. They combine a mix of assets, including equities, bonds and cash, with investments spread across a range of countries and business sectors. This wide diversification helps reduce risk as investors are not "putting all their eggs in one basket".

Why invest in BNY Mellon's FutureLegacy Funds?

It's important to focus on risk as well as reward when investing your hard-earned savings for and during retirement. This is especially the case in today's uncertain world.

What do the funds invest in?

The FutureLegacy funds invest globally in a mix of shares of individual companies, government and corporate bonds, and cash.

This document is designed to support financial advisers when recommending the BNY Mellon FutureLegacy range to a client. It may be useful for helping your client understand more about what they will be investing in and how their investment will be managed. The full fund literature including the prospectus and KIID can also be found at www.bnymellonim.com

Opportunités d'investissement pour les assureurs

STRATÉGIE SECURED OPPORTUNITIES

Août 2023

Le durcissement de la réglementation bancaire a incité certains investisseurs à se tourner vers la classe d'actifs « *direct lending* » ou prêts directs. Cette stratégie diversifiée recherche les opportunités les plus intéressantes au sein d'une gamme d'actifs de prêts garantis. Elle se concentre sur les instruments non cotés de financement spécialisé et vise à tirer parti de la transformation structurelle des marchés de prêts, en captant les primes d'illiquidité et de complexité.

Synthèse

- Le durcissement de la réglementation bancaire a conduit les banques à réduire le volume des crédits accordés, ce qui a permis l'émergence de prêteurs non bancaires.
- Dans un contexte de faibles rendements, les assureurs se sont tournés vers les prêts directs dans l'espoir d'améliorer les performances et le degré de diversification de leurs portefeuilles obligataires.
- Si les rendements des obligations traditionnelles ont augmenté sensiblement ces dernières années, les atouts des prêts directs sont indéniables, avec des performances annuelles susceptibles d'atteindre 7-9% en euros, pour un risque de type « investment grade », et avec des garanties renforcées.

L'Opportunité

LES BANQUES ONT LAISSÉ LE CHAMP LIBRE AUX PRÊTEURS NON BANCAIRES

Sous la pression réglementaire imposée dans le sillage de la crise financière de 2008, les banques ont progressivement réduit leurs activités de prêt et leurs bilans. Les prêteurs non bancaires se sont introduits dans la brèche pour répondre aux besoins de nombreux particuliers et entreprises en quête de sources alternatives de financement.

L'ABONDANCE DE FONDS A COMPROMIS LES CONDITIONS D'ENDETTEMENT, LES COVENANTS ET LES PERFORMANCES

De nombreux investisseurs se sont tournés vers les opportunités offertes par les prêts directs aux entreprises, ce qui a donné lieu à des levées de fonds record au cours des dernières années. Cette forte propension à prêter s'est traduite par un relâchement des conditions d'endettement, une dégradation des covenants et des performances moindres.

LES PRÊTS GARANTIS OFFRENT D'EXCELLENTE OPPORTUNITÉS

Souvent en raison de leur complexité opérationnelle, les prêts garantis (« *secured lending* ») aux consommateurs et aux petites entreprises (le « P » de PME, pour petites et moyennes entreprises) ont moins retenu l'attention des investisseurs. En outre, les autorités se sont concentrées sur des mesures plus directes pour soutenir les consommateurs par le biais de plans de relance. Parallèlement, les exigences accrues en matière de fonds propres pour certains types d'actifs ont maintenu les banques sous pression. Cet environnement offre des opportunités pour les investisseurs en mesure d'exploiter les primes d'illiquidité et de complexité. La garantie associée aux investissements proposés permet d'envisager, dans l'environnement de marché actuel, des performances annuelles d'environ 7-9% en euros, tout en assurant la

WALTER SCOTT

AUTOMATIC FOR THE PEOPLE

At the beginning of September, fellow Walter Scott investment manager Fraser Fox and I went on a two-week research trip to Japan where we met with 32 companies in three cities - Tokyo, Osaka and Kyoto.

Tokyo feels less busy than the last time I was here in December 2015, which is likely the result of changes in people's working habits. I was surprised by the number of companies that mentioned rethinking their floor space requirements and adopting flexible work options to retain employees and adapt to a post-Covid world. Home apartments tend to be small, so I always assumed working from home in Asia wouldn't be popular. This new set up poses obvious questions for some companies that own real estate in and around Tokyo and the rest of the country.

Japan's ageing demographic is also forcing companies to evolve. When you look around it's quite noticeable the average age is higher than in the US, even on the weekends when children aren't in school. Not only is Japan grappling with how to look after and pay for a growing number of elderly people, but the workforce is shrinking, which in turn is increasing the competition for talent.

Inflation has reared its ugly head in Japan as it has around much of the globe. The country has been desperately trying to manage inflation for decades. Unfortunately for the Bank of Japan, now that they finally have some inflation, everyone is complaining about it. The weak yen has significantly increased the cost of imported goods. This has come on top of a sharp rise in energy and raw material costs, creating a very painful cost-of-living squeeze for the Japanese.

Despite these challenges, the Japanese are finding ways to drive efficiencies and improve productivity. That is, they are good at figuring out how to do more with less. For example, factory automation and aiding customers via digital tools and processes.

We experienced this first hand while dining at a café where we chatted with, and were served by, a robot. What's more, we learned that the robot was operated by a young disabled woman 1,000 miles away. This is a prime example of technology allowing someone to work who may not have been able to otherwise. There is still an important role for talented human beings, but clearly machines are helping to fill some voids.

Overall, the quality of company meetings was exceptional. We heard companies talk about returns, returns on equity, returns on cash to shareholders and environmental, social and governance (ESG). A very productive and insightful trip.

DID YOU KNOW?

In 2021,
28.9%
of the population was 65 years or older – a record high.¹

Japan is expected to see a
40% DECREASE
in its total workforce by 2065.²

3% Inflation in September and August 2022 – near 8-year high.³

Automation could displace about
56% of work activities across Japan.⁵

Nearly
38m
people live in Tokyo, making it the world's most populated city.⁶

Japan ranks
#4 in the world for life expectancy at 84.8 years.⁷

Year	Automotive manufacturing	Other manufacturing
2015	1,276	211
2016	1,240	213
2017	1,158	226
2018	1,151	245
2019	1,248	273
2020	1,269	300
