Fund Overview

Objective

The objective of the Fund is to achieve a high level of income (greater than the income return of the FTSE ALL Share Index over a rolling 5 year period) and capital growth over the long term (5 years plus). The Fund invests at least 80% of its assets in shares of companies incorporated, domiciled or carrying out the main part of their economic activity in the UK. The Fund may also invest in private and unlisted equities and non-UK companies. The Fund may use derivatives (complex instruments) to manage the Fund more efficiently, with the aim of reducing risk, reducing costs and/or generating additional capital or income. The Fund has an active investment approach based on stock selection driven by the fund manager's assessment of valuation and invests in companies that enable the Fund to grow its dividend and deliver capital appreciation. The Fund is not constrained by a benchmark and has a flexible approach with no inbuilt bias to sector or company size.

Fund opportunities

- Bayer AG (Bayer), based in Leverkusen, Germany, manufactures products that include cardiovascular, oncology, haematology and ophthalmology drugs, over-the-counter (OTC) medications, animal health products and crop-protection products. In September 2016, Bayer announced the acquisition of US-based Monsanto Co. (Monsanto), which will make Bayer the world's largest seed and agricultural chemical company.
- Even though Bayer's leverage will increase owing to the Monsanto acquisition, we expect strong performance of its Pharmaceutical segment in the short term, which combined with geography-ical diversification and strong access to capital markets, should outweigh any negatives.

Risk factors

- The company-specific risk is influenced by two factors: the environment specific to that company, and the quality of its management. The most effective way to reduce company-specific risks is to diversify across a range of bonds — in other words, to seek portfolio diversification.
- Interest rate and currency risks have to be considered before investing in this bond. The price of the bond will most likely suffer if the general yield level of the US dollar yield curve shifts up or company specific risk perception increases.
