Investment strategy

The Trust generally gains its exposure to a diversified portfolio of investments through a mix of investment managers.

The moderate growth orientation of the Trust means it has similar exposure to growth assets (such as Australian and international property and shares and alternative growth) and defensive assets (such as cash, fixed interest and alternative defensive).

The Trust is authorised to utilise approved derivative instruments for risk management purposes subject to the specific restriction that the derivative instruments cannot be used to gear portfolio exposure.

The underlying investment managers may utilize strategies for the management of currency exposure. The level of currency hedging used for the Trust will vary from time to time. The Trust has the capacity to change the level and nature of the currency overlay to manage the Trusts currency risk.

Quarter highlights

- TCW Global Securitised Debt was added to the Income Trust and Shenkman, Muzinich and Oaktree were added over the quarter through an allocation to the Extended Credit trust.
- Unlisted infrastructure portfolio outperformed.
- An overweight to the Income Trust added value as the asset class had strong relative returns.
- The international equities portfolio outperformed, with Royal London intrinsic value and Pzena deep value portfolios outperforming.
- An underweight to diversified fixed interest added value as the asset class was a weak performer.
- Direct property portfolio underperformed as valuation headwinds increased as a result of high interest rates.
- The alternative growth portfolio underperformed its benchmark.
