Past performance is not a reliable indicator of future performance. Yearly returns are annualised and assume distributions are reinvested. Net return is net of fees and costs. Growth return reflects changes in the capital values of the units. External fund manager data may be lagged. Certain data included has been sourced from third-party providers. Where any variance between the client statements and this fact sheet arises, refer to client statements. Breakdowns are for illustrative purposes only. Percentages may not always add up to 100% owing to derivatives, currencies or rounding.

About PDFReactor

RealObjects PDFReactor is a powerful formatting processor for converting HTML and XML documents into PDF. It uses Cascading Style Sheets (CSS) to define page layout and styles. The server-side tool enables a great variety of applications in the fields of ERP, eCommerce and Electronic Publishing.

PDFReactor supports HTML5, CSS3 and JavaScript.

It allows you to dynamically generate PDF documents such as invoices, delivery notes and shipping documents on-the-fly. PDFReactor allows you to easily add server-based PDF generation functionality to your application or service. Since PDFReactor runs on a server, the end-user in general does not need any software other than a PDF viewer.
