ROYAL LONDON SHORT TERM MONEY MARKET

A short-term variable net asset value money market fund

31.07.23

Overview

The Fund's investment objective is to preserve capital and provide an income over rolling 12-month periods by investing at least 80% in cash and cash equivalents. The Fund's performance target is to outperform, after the deduction of charges, the Bank of England Sterling Overnight Interbank Average (SONIA) over rolling 12-month periods. This is the average overnight interest rate UK banks pay for unsecured transactions in sterling and is considered an appropriate benchmark for the Fund's performance. In addition to the benchmark for the Fund's performance as noted above, the IA Short Term Money Market sector is considered an appropriate benchmark for performance comparison.

Year-on-year performance

Fund Commentary

The Bank of England meeting in June slightly surprised the market, with many expecting a hike of 0.25%. However, the strength of data since the last meeting, notably on inflation, meant that the Bank raised rates by 0.50% to 5.00%. The scale of the move and the hawkish tone of subsequent Bank communication meant that the market has again increased its expectation of the peak of interest rates, this time from expecting a peak of 5.50% to one of 6.00%.

The Bank of England decision meant that SONIA rose from 4.43% to 4.93% over the month, while ICE Term SONIA three-month rates rose from 4.76% to 5.27%. Two-year gilts, often seen as a proxy for market expectations of BoE rates, rose from 4.33% to 5.26%, reflecting the more hawkish market view. Activity was focused in overnight deposits and repo. In CDs, we continue to focus on the three-month area with names such as Barclays, Crédit Agricole and OCBC. Given the uncertainty over interest rate peaking, we also continued to add selectively to floating rate CDs – including ANZ paper maturing in January and one-year paper from Toronto Dominion, as well as new issue short-dated treasury bills.

About PDFReactor

RealObjects PDFReactor is a powerful formatting processor for converting HTML and XML documents into PDF. It uses Cascading Style Sheets (CSS) to define page layout and styles. The server-side tool enables a great variety of applications in the fields of ERP, eCommerce and Electronic Publishing.

PDFReactor supports HTML5, CSS3 and JavaScript.

It allows you to dynamically generate PDF documents such as invoices, delivery notes and shipping documents on-the-fly. PDFReactor allows you to easily add server-based PDF generation functionality to your application or service. Since PDFReactor runs on a server, the end-user in general does not need any software other than a PDF viewer.

The fund is not a guaranteed investment.

Principal Fluctuation

An investment in the fund is different from an investment in deposits. The principal invested in the fund is capable of fluctuation in value.

No External Support

The fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

Risk of Loss

Any risk of loss of the principal is to be borne by the investor.

ESG Metrics Explanation

Carbon Footprint: Exposure to high emitters in the portfolio, expressed in tCO₂e/\$M invested. Financed emissions (explained above) are divided by the portfolio value, the same approach for listed companies and private issuers is applied in this metric.

Weighted Average Carbon Intensity: Portfolio's exposure to carbon-intensive companies, expressed in tCO₂e / \$M revenue. Scope 1 and scope 2 GHG emissions are divided by companies revenues, then multiplied based on portfolio weights (the current value of the investment relative to the current portfolio value). The WACI is calculated as a weighted average sum of the holdings with carbon intensity coverage.

Fund Manager(s)**Name**Tony Cole**Name**Craig Inches**Yield Definitions**

The historic yield reflects distributions declared over the past twelve months as a percentage of the mid-market price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions. Reported yields reflect RLAM's current perception of market conventions around timing of bond cash flows.

Important Information

This is a financial promotion and is not investment advice.

The Fund is a sub-fund of Royal London Bond Funds ICVC, an open-ended investment company with variable capital with segregated liability between sub-funds, incorporated in England and Wales under registered number IC000797. The Authorised Corporate Director (ACD) is Royal London Unit Trust Managers Limited, authorised and regulated by the Financial Conduct Authority, with firm reference number 144037. For more information on the fund or the risks of investing, please refer to the Prospectus or Key Investor Information Document (KIID), available via the relevant Fund Information page on www.rlam.com.

Issued by Royal London Asset Management Limited, 80 Fenchurch Street, London EC3M 4BY. Authorised and regulated by the Financial Conduct Authority, firm reference number 141665. A subsidiary of The Royal London Mutual Insurance Society Limited.

Please note that the impact of Futures is not considered as part of the overall fund Duration calculation; Fund level Duration is based on long only physical assets (incl cash).

Key Concepts to Understand

Money market instruments: Money-market instruments are short-term, liquid investments issued by public institutions or companies.

Rolling 12 month period: A rolling 12 month period is any period of twelve months, no matter which day you start on.

Reverse repurchase agreements: Agreeing to sell a purchased security at a specified later date.

Efficient Portfolio Management: A list of approved investment techniques, including the use of derivatives, used to protect against excessive risk, reduce cost or generate extra income or growth.

Ratings: Credit-rating agencies rate bonds based on the likelihood of them defaulting and being unable to repay their debt.

Fund Risks

Investment Risk: The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit Risk: Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM Techniques: The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest Rate Risk: Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Inflation risk: Where the income yield is lower than the rate of inflation, the real value of your investment will reduce over time.

Money Market Fund Risks: A Money Market Fund is not a guaranteed investment, and is different from an investment in deposits. The principal invested in the Fund is capable of fluctuation and the risk of loss of the principal is to be borne by the investor. The Fund does not rely on external support for guaranteeing the liquidity of the Fund or stabilising the NAV per share.
