You are advised to read the information provided here so you can make an informed decision about whether to invest in this Fund.

What is this product?

Type: The Fund is an open-end UCITS fund.

Investment Objective and Policy: The Fund's investment objective is to seek to offer investors long-term capital growth by primarily investing in non-US companies.

To achieve its objective of capital growth, the Fund will invest primarily in equity securities (company shares) of non-U.S. companies, the majority of which are traded in mature markets and may invest in countries whose economies are still developing.

The Fund particularly seeks companies that have financial strength and stability, strong management and fundamental value.

For hedging and efficient portfolio management and investment purposes, the Fund may employ investment techniques and instruments, such as trading in futures, forwards, options and swaps.

The Fund also may invest up to 20% of its net asset value in debt instruments. The debt securities in which the Fund may invest shall include investment grade, non-investment grade and unrated debt securities of any credit quality and having any maturity or duration. Such debt securities may be supranational, government or corporate securities and may be fixed or floating rate securities. No more than 10% of the Fund's net asset value may be invested in below investment grade or "high yield" securities.

The Fund may invest in ETCs and futures contracts related to gold and precious metals.

What are the risks and what could I get in return?

This risk indicator assumes you keep the product for 20 years. The actual risk can vary significantly if you cash in at an early stage and you may get less back.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions poor market conditions will likely impact our capacity to pay you. With a category 5 fund, the risk of losing your money is higher but there is also a chance of making higher gains.

The Fund is in category 5 because of the above average range and frequency of price movements of the underlying investments.

This product does not include any protection from future market performance and therefore you could lose some or the entirety of your investment.

The SRI assumes you hold your shares in the Company for at least five years. It rates the potential losses from future performance at a medium level, and poor market conditions will impact the amount you could get back. Any return you receive depends on future market performance; the Company does not seek any protection from future market performance so you could lose some or all of your investment.

What are the risks and what could I get in return? (continued)

This table shows the money you could get back over the next 20 years, under different scenarios, assuming that you invest GBP1,000 per year.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products.

The unfavourable, moderate and favourable scenarios shown are illustrations using the worst, average and best performance of the Fund over the last 10 years for the Benchmark. Markets could develop very differently in the future.

The stress scenario shows what you might get back in extreme market circumstances.

What happens if First Eagle Investments is unable to pay out?

You may face financial loss should the Manager or the Depositary default on their obligations to the Fund. In the event you suffer any such loss, there is no compensation or guarantee scheme in place which may offset all or any of such loss. In the event of insolvency of the Manager or the Depositary, the Fund's assets are segregated from the assets of the Manager and the Depositary and will not be subject to a claim by the liquidator of the Manager or the Depositary.

What are the costs?

In addition to the costs described below, financial institutions through whom shares in the Fund are purchased and/or the person advising you about this product may charge you fees. This document should, therefore, be read together with any agreement between you and such financial institution or advisor with regard to services they provided, the fees charged for those services and the impact of such fees on your investment over time.

Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product performs. The amounts shown in the table are illustrations based on a sample investment amount and different possible investment periods as estimated by the Benchmark.

We have assumed:

- In the first year you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.

	If you exit after 20 years
Total costs	GBP 10
Annual cost impact (*)	10.1% each year

(*) "This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 10.1 % before costs and 10.1 % after costs."

*This illustrates how costs reduce your return each year over the holding period.

What are the costs? (continued)
