

Aviva Life

Underlying Investment Option Document

Aviva Life Jupiter Financial Opportunities S4

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product

ISIN: GB00B068CX48

Fund Type: Life Fund

Document valid as at: 29th February 2024

This document should be read with the Select Investment Growth & Income Option Key Information Document. When taking out this product, your adviser will give you a personalised illustration, which will provide full details on the investment selections you may be considering.

For further information, you can also refer to our Fund Factsheets and 'Your Guide to Fund Factsheets'.

What is this product?

Fund Objective

To provide capital growth over the long term (at least five years). At least 70% of the fund is invested in shares of companies in the financial services and related sectors based anywhere in the world. Up to 30% of the fund may be invested in other assets, including shares of other companies, open-ended funds (including funds managed by Jupiter and its associates), cash and near cash.

Intended Retail Investor

As a customer investing in the Select Investment Growth and Income Option this product could be suitable if you:

- have at least £10,000 to invest over the medium to long term and have used up your ISA allowance for this year
- are a basic or higher rate income tax payer
- are prepared to accept some risk.

This fund has external fund holdings. This means the fund has holdings in one or more other funds managed by a different company in the Aviva group or by another fund management company.

The Financial Services Compensation Scheme (FSCS) provides protection to consumers by allowing them to claim compensation in the event that an authorised financial services firm (such as Aviva Life & Pensions UK Limited) is unable to meet claims made against it.

Whether you qualify for any compensation under FSCS will depend on the type of investments you hold. This means that if your investments through Aviva Life & Pensions UK Limited have external fund holdings, then you would not be eligible to make a claim for compensation under the FSCS in the limited circumstances where the external provider is unable to meet its obligations.

What are the risks and what could I get in return?

Risk Indicator

The risk indicator is based on a 10 year holding period.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 6 out of 7 which is the second highest risk class. This rates the potential losses from future performance at a high level, and poor market conditions are very likely to impact our capacity to pay you.

This product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section "What happens if Aviva Life & Pensions UK Limited is unable to pay out?" in the accompanying Key Information Document). The indicator shown above does not consider this protection.

FCA regulation requires Insurance Companies to provide a Key Information Document (KID) and Underlying Investment Option Document (UIOD) to help you with your Investment Fund Selection.

The KID and UIODs for the Select Investment Growth & Income Option are accessible to you via the Fund Centre on our website.

Note: As part of the regulation an FCA specific risk rating was introduced which is different to Aviva's own fund risk ratings. Therefore, if you are viewing a fund factsheet and UIOD you will notice that the risk rating could be different on these documents even though it relates to the same fund.

Other risks not captured by the SRI figure above include future climate risks.

Investment performance information

This fund invests in a range of assets, each of which have their own elements of risk. This particular fund invests primarily in the following assets;

- Equities
- Smaller Companies
- Foreign Exchange Risk
- Emerging Markets

The benchmark MSCI All Country World Financials Index is used to compare against the fund performance. The fund does not aim to track the benchmark.

What could affect my return positively?

Conditions where this fund could produce greater returns would be:

- Equities: If the companies invested into consistently perform well and pay regular dividends, the value of your investment may increase over the long term.
- Smaller Companies: The large value movements of shares in smaller companies can lead to greater returns.
- Exchange Rate: If the exchange rate moves favourably to domestic currency, the return may increase.
- Emerging Markets: Where a fund invests substantially in emerging markets, its value may move up by large amounts and more frequently than one that invests in developed markets. It may take advantage of these more frequent value movements through purchasing undervalued securities in the expectation that their value will rise again.

What could affect my return negatively?

Conditions where this fund could produce worse returns would be:

- Equities: The value of your investment will fall if the markets perform poorly and this will lead to investment loss.
- Smaller Companies: The large value movements of shares in smaller companies can lead to greater losses. The shares can also be more difficult to buy and sell, so smaller companies funds can carry more risk.
- Exchange Rate: If the exchange rate moves unfavourably to domestic currency, the return may decrease.
- Emerging Markets: Where a fund invests substantially in emerging markets, its value may move down by large amounts and more frequently than one that invests in developed markets. It may not be as stringently regulated, and it may be harder to buy and sell securities compared to developed markets due to these increased risks.

The Bond does not mature, and you can make regular/occasional withdrawals from your investment. Under severely adverse market conditions you may lose some or potentially all your investment, if you choose to encash.

The value of the investment can go down as well as up and you may not get back the amount of your original investment.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods.

The figures assume you invest £10,000.

The figures are estimates and may change in the future.

Your financial adviser may make Adviser charges. If so, your adviser will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

The total costs vary depending on the level of investment and the funds you choose. We recommend you refer to your personalised illustration to see the effects of the costs for further detail of the effects of the costs.

Cost over time

Investment £10,000.00			
Scenarios	If you cash in after 1 year	If you cash in after 5 years	If you cash in at 10 years
Total costs	£152.88	£886.99	£2,137.33
Impact on return (RIY) per year	1.53%	1.53%	1.53%

The table below shows:

- The impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- What the different cost categories mean.

Composition of costs

This table shows the impact on return per year			
One-off costs	Entry costs	0.00%	The impact of the costs you pay when entering your investment.
	Exit costs	0.00%	The impact of the costs of exiting your investment.
Ongoing costs	Portfolio transaction costs	0.53%	The impact of the costs of us buying and selling underlying investments for the product. The underlying fund has an anti-dilution mechanism, but it was not triggered during the measurement period, so there has been no benefit in terms of reduction of the transaction costs you pay. Please note this could change in the future. Please see explanation below.
	Other ongoing costs	1.00%	The impact of the costs that we take each year for managing your investments.
Incidental costs	Performance fees	0.00%	A performance fee is not payable to Aviva Life & Pensions UK Limited.
	Carried interests	0.00%	The impact of carried interests.

A dilution levy is a charge for investing into or out of a fund. This levy is paid only by the investments (and so, the individual investor) from which those costs have occurred. For example, if an individual invests £1,000 into a fund and the trading cost for this transaction is £2, then the value of the investment is reduced to £998. With the dilution levy, the investments held by the other investors in the underlying fund will not incur any charge. If there were no dilution levy, trading costs would be paid by the underlying fund, which in turn would disadvantage all investors in the underlying fund.

These costs will be shown in the Key Features document and illustration. In these documents we may use different names for the above charges.
