ROYAL LONDON GLOBAL HIGH YIELD BOND FUND

30.06.23

Overview

The investment objective of the Fund is to provide a combination of investment growth and income, the Fund will seek to achieve its objective on an active basis. The Fund seeks to achieve its investment objective by outperforming its benchmark, the BofA Merrill Lynch BB-B Global Non-Financial High Yield Constrained Index (the "Benchmark") by 1% per annum over rolling three year periods. The Benchmark is being used by the Fund for performance comparison purposes only and the Fund does not intend to track the Benchmark.

Year-on-year performance

Yield Definitions

The distribution yield reflects the amounts that may be expected to be distributed over the next 12 months. The underlying yield reflects the annualised income net of expenses of the Fund as a percentage (calculated in accordance with the relevant accounting standards). Both these yields are calculated as a percentage of the mid-price of the Fund as at the date shown and are month end snap shots of the portfolio on that day and do not include any preliminary charges. Investors may be subject to tax on distributions. Reported yields reflect RLAM's current perception of market conventions around timing of bond cash flows.

Unrated Bonds

Unrated bonds are not rated by a credit rating agency. RLAM ascribes internal ratings for these bonds which will vary for each asset.

Important Information

This is a financial promotion and is not investment advice.

The Fund is a sub-fund of Royal London Asset Management Funds plc, an open-ended investment company with variable capital (ICVC), with segregated liability between sub-funds. Incorporated with limited liability under the laws of Ireland and authorised by the Central Bank of Ireland as a UCITS Fund. It is a recognised scheme under the Financial Services and Markets Act 2000. The Management Company is FundRock Management Company SA, Registered office: 33 rue de Gasperich, L – 5826 Hesperange, Luxembourg and is authorised and regulated by the Commission de Surveillance du Secteur Financier (CSSF). The Investment Manager is Royal London Asset Management Limited. For more information on the Fund or the risks of investing, please refer to the Prospectus or Key Investor Information Document (KIID), available via the relevant Fund Information page on www.rlam.com. Most of the protections provided by the UK regulatory system, and the compensation under the Financial Services Compensation Scheme, will not be available.

Issued by Royal London Asset Management Limited, 80 Fenchurch Street, London EC3M 4BY. Authorised and regulated by the Financial Conduct Authority, firm reference number 141665. A subsidiary of The Royal London Mutual Insurance Society Limited.

Please note that the impact of Futures is not considered as part of the overall fund Duration calculation; Fund level Duration is based on long only physical assets (incl cash).

Fund Commentary

The fund (Z class) returned 0.93%, net of fees, in June, which was behind the benchmark, the ICE BofA Merrill Lynch BB-B Global Non-Financial High Yield Constrained Index (100% GBP hedged), return of 1.17%. Against the fund's objective, outperforming its benchmark by 1% per annum over rolling three-year periods, it is ahead of the benchmark, gross of fees (1.12% versus 0.54%). Global high yield spreads (BB-B index) were tighter on the month at 396bps (-52bps), in contrast, the government yield curve increased by 34bps, which resulted with the high yield market having a positive monthly return of 1.17%. The high yield market is now yielding 7.98% (YTW) with duration of 3.86 years. The fund's yield, FX-adjusted, stood at 8.94% (YTW) at the end of the month, with a duration of 4.4 years.

Following the largest volume of high yield new issuance in May, June saw a pullback in amount issued at \$12.8bn. Unlike in May where the new issuance split was around 55%/45% between BB/B respectively, in June, the new issuance was split approximately 32%/60%/8% between BB/B/CCC respectively. The US high yield default rate inched higher in June but remains low at 2.4%. During the GFC the default rate was seen over 20% and it was over 7% during the pandemic. We do expect the default rate to keep rising further in 2023 as the global economy slows and the US heads towards a recession.

In the fund, by rating, our underweight BB rated and overweight B rated positions underperformed the benchmark but did post positive total returns. Outside the benchmark, our BBB & Above and CCC & Below holdings contributed strongly to total returns. Geographically, our underweight UK position was the main laggard, hurting us against the benchmark and total return, while Europe outperformed the benchmark. US and RoW were behind the benchmark but saw good positive total returns. For the market as a whole, the regions produced similar returns, with the RoW, the US and Europe slightly outperforming the UK on a relative basis. Media, energy and telecommunications were the best performing sectors, while retail and utility were the worst.

*Yield-to-worst refers to the redemption date that produces the lowest return.

Key Concepts to Understand

Bonds: Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest.

Derivative: A financial instrument whose price is dependent upon or derived from one or more underlying asset.

Efficient Portfolio Management: An investment technique that allows the use of derivatives for at least one of the following purposes: to increase the value of the Fund; to protect the value of the Fund or to reduce the risks of certain investments.

Currency Hedged Share Classes: Currency Hedged Share Classes aim to provide investors with a return highly correlated to the return of the base currency share class by minimising the impact of exchange rate fluctuations between the base currency of the Fund and the investor's chosen currency. Derivatives are typically used to hedge the relevant share classes

Fund Risks

Investment Risk: The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit Risk: Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM Techniques: The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Exchange Rate Risk: Investing in assets denominated in a currency other than the base currency of the Fund means the value of the investment can be affected by changes in exchange rates.

Interest Rate Risk: Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

Liquidity Risk: In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Emerging Markets Risk: Investing in Emerging Markets may provide the potential for greater rewards but carries greater risk due to the possibility of high volatility, low liquidity, currency fluctuations, the adverse effect of social, political and economic instability, weak supervisory structures and accounting standards.

Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
