The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.

Investors should note that actual portfolio returns may be different to the returns of the model portfolio. Figures represent performance of a model portfolio, individual account performance may differ.

Past performance is not a guide to future performance. Levels and bases for taxation may change.

CG Bond Fund

Investment objective

To achieve income in excess of the FTSE All Share Index with some capital growth by investing primarily in shares of UK companies.

Return profile

■ CG Bond Fund
 ■ ABI UK Equity Income

Annualised volatility: risk is measured by the variability of performance. The higher the standard deviation, the greater the variability (and therefore the risk) of the Fund or the index.

Sharpe ratio: measures the risk/return trade-off. It is the annualised return less the average risk-free rate, divided by the annualised volatility of the model.

Portfolio Manager commentary

It was pleasing to see positive returns for our ESG portfolios in what were very volatile market conditions. This was a quarter where markets were spooked by two major worries: whether higher levels of inflation would be persistent rather than transitory and whether the COVID-19 Omicron variant would be concerning enough to cause widespread economic and social harm. Generally it was a quarter where outperformance was limited to areas like oil, banks and megacap technology stocks.

Our strategy prefers to target longer term growth stories and sees more value in smaller disruptive companies. Pleasingly, some of our favoured structural themes such as smart materials, robotics, timber and clean water were very resilient in this trickier investment backdrop. Worries surrounding worker shortages in areas like healthcare and manufacturing were part of the inflation narrative. Robotics and automation can potentially help alleviate some of this burden and we saw examples of companies announce more investment in this area.

Our strategy prefers to target longer term growth stories and sees more value in smaller disruptive companies. Pleasingly, some of our favoured structural themes such as smart materials, robotics, timber and clean water were very resilient in this trickier investment backdrop. Worries surrounding worker shortages in areas like healthcare and manufacturing were part of the inflation narrative. Robotics and automation can potentially help alleviate some of this burden and we saw examples of companies announce more investment in this area.

On a different note, we also saw some major announcements from both governments and companies at COP 26 around electric vehicles. This theme is less a play on which car company will be the winner but more a structural innovation story on batteries becoming cheaper and more powerful. We made no changes to the portfolios this quarter but have been considering further investment into infrastructure, an area we like both from an inflation protection perspective as well as offering useful diversification benefits.
