The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.

Investors should note that actual portfolio returns may be different to the returns of the model portfolio. Figures represent performance of a model portfolio, individual account performance may differ.

Past performance is not a guide to future performance. Levels and bases for taxation may change.

GE Fund

Investment objective

The Fund's investment objective is to achieve a total return (combination of capital growth and income) over the medium term (3-5 years) by investing at least 80% in index-linked bonds issued by governments globally. The Fund's performance target is to outperform, after the deduction of charges, the Barclays World Government Inflation Linked Bond Total Return Index (GBP hedged) (the "Index") over rolling 5-year periods. The Index is considered an appropriate benchmark for the Fund's performance, as the Fund's potential investments will predominantly be included in the Index. In addition to the benchmark for the Fund's performance as noted above (the "Index"), the IA Global Inflation Linked Bond sector is considered an appropriate benchmark for performance comparison.

Portfolio Manager commentary

It was pleasing to see positive returns for our ESG portfolios in what were very volatile market conditions. This was a quarter where markets were spooked by two major worries: whether higher levels of inflation would be persistent rather than transitory and whether the COVID-19 Omicron variant would be concerning enough to cause widespread economic and social harm. Generally it was a quarter where outperformance was limited to areas like oil, banks and megacap technology stocks.

Our strategy prefers to target longer term growth stories and sees more value in smaller disruptive companies. Pleasingly, some of our favoured structural themes such as smart materials, robotics, timber and clean water were very resilient in this trickier investment backdrop. Worries surrounding worker shortages in areas like healthcare and manufacturing were part of the inflation narrative. Robotics and automation can potentially help alleviate some of this burden and we saw examples of companies announce more investment in this area.

Our strategy prefers to target longer term growth stories and sees more value in smaller disruptive companies. Pleasingly, some of our favoured structural themes such as smart materials, robotics, timber and clean water were very resilient in this trickier investment backdrop. Worries surrounding worker shortages in areas like healthcare and manufacturing were part of the inflation narrative. Robotics and automation can potentially help alleviate some of this burden and we saw examples of companies announce more investment in this area.

On a different note, we also saw some major announcements from both governments and companies at COP 26 around electric vehicles. This theme is less a play on which car company will be the winner but more a structural innovation story on batteries becoming cheaper and more powerful. We made no changes to the portfolios this quarter but have been considering further investment into infrastructure, an area we like both from an inflation protection perspective as well as offering useful diversification benefits.
