The Fund's investment objective is to achieve capital growth over the medium term, which should be considered as a period of 3-5 years, by investing in a diverse range of equity and fixed income assets. Investments in the Fund will adhere to the Investment Manager's ethical and sustainable investment policy. The Fund is actively managed, meaning that the Investment Manager will use their expertise to select investments to meet the objective. The IA Mixed Investments 40-85% Shares sector is considered an appropriate benchmark for performance comparison.

November was a strong month for risk assets. Markets rose on hopes of an economic soft landing coupled with an expectation that central banks will pivot and start to reduce interest rates. The inflation data across Europe and the US continued to demonstrate inflationary pressures are receding, and this was highlighted in November by a significant fall in the oil price. As a result of the more positive inflation outlook bond prices rose, with US treasuries experiencing their largest gains in any one month since 1985. The MSCI World Index rose by 4.9% in sterling terms, while in the UK, the FTSE All-Share rose by 3%. The best performing sectors included technology and real estate, where the latter has significantly underperformed since rates started to rise. Valuations in both sectors should be major beneficiaries of falling discount rates. Technology rose 9% and real estate sector rose by 7.1% during the month, whilst the more defensive areas such as energy fell by 3.7%.

The Sterling credit market performed strongly in November, returning 2.97%, and taking the year-to-date return to 4.1%. This was driven by both falling gilt yields and tighter credit spreads. The yield on ten-year government bonds fell 32bps to end the month at 4.18%, driven by investor expectations that central bank rates have peaked. Credit spreads tightened 13bps to 1.21%, their tightest level in over eighteen months. The fund outperformed in November and was ranked in the first quartile relative to its peer group.

The fund's top contributors to performance in November included Latin American eCommerce and payments firm Mercadolibre, which published positive financial results. Other key performers included specialist chemical distributor IMCD. Shares of electrical products maker Schneider went up after publishing new long-term targets. Detractors included sterilisation specialist Steris, following concerns about capital equipment deliveries in its results. Shares of Asian insurer AIA Group were also weak due to continued weak China macroeconomic environment.

The fund began a new position in Comfort Systems, the leading installer of heating, ventilation and air conditioning systems in the United States. The business is well placed to focus on the decarbonisation of buildings, along with data centre growth and reshoring of manufacturing capacity. We also added to positions in Mercadolibre and internet search firm Alphabet.

Yield Definition

Sector Breakdown

The historic yield reflects distributions declared over the past twelve months as a percentage of the mid-market price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions. Reported yields reflect RLAM's current perception of market conventions around timing of bond cash flows.

ESG Terms and Definitions

ESG Integration: The systematic and explicit inclusion of environmental, social and governance (ESG) factors into investment analysis and investment decisions.

Promotes Environmental or Social Factors: An ESG Fund promotes, among other characteristics, environmental or social characteristics, or a combination of those characteristics, provided that the companies in which the investments are made follow good governance practices.

Sustainable Fund Objective: A product that has sustainable investment or a reduction in carbon emissions as its objective.

Exclusions: Explicitly prohibits investing in a particular company, sector, business activity, country or region.

ESG Characteristics Rationale

The Fund focuses on the sustainability of the products and services of the companies it invests in, as well as their standards of environmental, social, governance (“ESG”) management, alongside financial analysis. The investment approach is fundamentally based on positive screening; identifying companies that are making a positive contribution towards a cleaner, healthier, safer and more inclusive society, through assessing both what a company does and how it does it, and through active engagement to encourage continual improvement. The fund will not invest in companies that undertake business activities deemed to be detrimental to society and that breach our Do No Significant Harm principle. Further details of the Funds Sustainable Investment process can be found in the ethical and sustainable investment policy at www.rlam.com

ESG Characteristics

Yes	No

ESG Integration

ESG Metrics Explanation

Carbon Footprint: Exposure to high emitters in the portfolio, expressed in tCO₂e/\$M invested. Financed emissions (explained above) are divided by the portfolio value, the same approach for listed companies and private issuers is applied in this metric.

Financed Emissions: The emissions from activities in the real economy that are financed through lending and investment portfolios, expressed in tCO₂e. Emissions are attributed to a portfolio based on the portion of the company’s value the portfolio holds, and using different accounting values for public and private corporates. We provide financed emissions for scope 1 and 2 emissions.

Weighted Average Carbon Intensity: Portfolio’s exposure to carbon-intensive companies, expressed in tCO₂e / \$M revenue. Scope 1 and scope 2 GHG emissions are divided by companies revenues, then multiplied based on portfolio weights (the current value of the investment relative to the current portfolio value). The WACI is

Promotes Environmental or Social Characteristics

Sustainable Fund Objective

calculated as a weighted average sum of the holdings with carbon intensity coverage.

Bonds: are defined as fixed-income investments issued as debt by companies and public bodies to raise finance. Investors in bonds receive a previously agreed, non-variable interest payment until the investment matures. Corporate bonds are those issued by companies to raise finance.

Capital Growth: The rise in an investment's value over time.

Derivative: A financial instrument whose price is dependent upon or derived from one or more underlying asset.

Equities: Securities that represent an ownership interest in a company.

Environmental, social and governance: A list of predefined criteria that determines how a company operates in terms of sustainability and overall corporate governance.

Efficient Portfolio Management (EPM) Techniques The Fund may engage in EPM techniques including holdings of derivative instruments. The use of these instruments may expose the Fund to volatile investment returns and increase the volatility of the net asset value of the Fund. EPM techniques may involve the Fund entering into transactions with counterparties where there may be a risk of counterparty default. The Fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations.

Fund Risks

Investment Risk: The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Emerging Markets Risk: Investing in Emerging Markets may provide the potential for greater rewards but carries greater risk due to the possibility of high volatility, low liquidity, currency fluctuations, the adverse effect of social, political and economic instability, weak supervisory structures and accounting standards.

EPM Techniques: The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Exchange Rate Risk: Investing in assets denominated in a currency other than the base currency of the Fund means the value of the investment can be affected by changes in exchange rates.

Liquidity Risk: In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Responsible Investment Style Risk The Fund can only invest in holdings that demonstrate compliance with certain sustainable indicators or ESG characteristics. This reduces the number of securities in which the Fund can invest and there may as a result be occasions where it forgoes more strongly performing investment opportunities, potentially underperforming non-sustainable funds.
