| Dow Jones Brookfield Global Infrastructure Index* | 1.24  | 7.67  | 7.85  | 23.81 | 19.25      |
| <b>Outperformance</b>                             | -0.68 | -2.35 | -3.15 | -6.71 | -2.39      |

Past performance is not a reliable indicator of future performance. The total return performance figures quoted are historical, calculated using end-of-month prices and do not allow for the effects of income tax or inflation. Total returns assume the reinvestment of all distributions. The performance is quoted net of all fees and expenses. The indices do not incur these costs.

\* SI (p.a.) annualised total return since inception (SI) hedged for performance calculation purposes to 31 January 2025.  
+ Hedged to AUD

## Fund Commentary

Infrastructure is at the beginning of a multi-decade investment cycle, due to secular trends such as energy transition and digitalisation. The investment team believe that the growth of listed infrastructure will continue to be supported by these strong secular tailwinds and its underlying characteristics, such as resilient cash flows generating potentially high distribution levels that are very attractive in this market environment.

## Portfolio Strategy and Outlook

Infrastructure is at the beginning of a multi-decade investment cycle, due to secular trends such as energy transition and digitalisation. The investment team believe that the growth of listed infrastructure will continue to be supported by these strong secular tailwinds and its underlying characteristics, such as resilient cash flows generating potentially high distribution levels that are very attractive in this market environment.

The Fund maintained an overweight position to the telecommunications sector. As the investment team are getting close to the end of initial 5G coverage rollout phase, network technology and fast device evolution will continue driving strong data consumption, which in turn require further network densification in the near future. Additionally, while the AI hype has been present in the data center industry for some time, there are increasing concerns on the capacity oversupply risk in the industry. However, the investment team see little oversupply risk in the Tier-1 markets where the listed players operate in. Supply constraints and energy challenges will persist in the near term, creating a tight demand-supply dynamic that provides strong tailwinds for the sector.

The investment team also has an overweight position to the industrials sector. The team expect wealth effects, new transport technologies and continued urbanisation to support long term growth in demand for mobility. Consumers continue to prioritise spending on experiences vs. goods, and search for value (combined business/leisure trips or ‘shoulder season’ trips). Domestic travel trends may be more robust than international travel trends in the coming months, although duty free shopping could regain some relevance vs. high street, supporting non-regulated airport revenues.

The investment team have an underweight position to the utilities sector due to relative valuations. Policy and regulation, generally, continues to be supportive though emerging macro-economic pressures need to be monitored for their impact on the investment environment and affordability for customers.

The investment team has reduced the underweight position to the energy sector. The shift towards growth mindset, driven by strong expectations for gas demand related to power generation and data centers has been reflected by the current valuations seen in the sector.

## Features of global listed infrastructure

### Essential assets

Assets that are the backbone of society, providing essential and valuable services for the stability and growth of the economy

### Sustainable earnings

Assets that can generate inflation-linked, long-dated and sustainable earnings growth through economic cycles

### Government backing

Infrastructure spending has been heavily featured in recovery programs as governments aim for GDP multiplier effects

### Long cycle

A multi-decade investment cycle, supported by trends such as urbanisation, energy transition and digitalisation
